Why not visit his Web page at:
http://ourworld.compuserve.com/homepages/bcheek/ , you can always leave an email message there since his address is listed.

The address of the Cheeks' Guy is unlisted.

But if you are very patient he will appear
on this stage in a town near you...or me,
or them....how many are a chuckle?

Be patient. Check in often. He may even
send you his. He'll autograph it for you
just in case he gets more popular than he
is already....

> Pro-60 to restore the cellular band. Any help will be greatly
> appreciated.

As with most of the most recent RS (mfr by Uniden & GRE) and Unidens own sets the frequency "coverage" is controlled by the main IC rather than a Matrix of Diodes or similar as on some earlier sets.

The US PRO-60 uses a CPU that has the US cell frequencies blocked out, the version sold here in the UK and elswehere in Europe uses a different CPU (the only different component between the two "models") that does not have the frequencies used by US cellular blocked out.

The only way to restore the actual frequencies you refer to on your PRO-60 is replace the main IC (a 100 pin'ish surface mount chip). The PRO-60 however does not have programmable increment steps and you would find if you did replace the IC then it would step through in 12.5KHz increments. US cellular uses 30KHz.

Hope this helps.

> Not that its that important, this range is in the TV band. It can be
> nice to be able to listen into TV sound, but its not that important.

Pardon ?

The Uniden IC (UC1771) used on the PRO-26 (Model 20-9506) sold here in the UK and elsewhere in Europe where done so allows full 25-1300MHz coverage (including the 520-760MHz above).

You do mean the handheld unit or are you perhaps referring to the PRO-2006 which does have the 520-760MHz gap ??

If you do have a PRO-26 then you should have no trouble in entering any frequency between 520-760MHz. If you can't then.....mmmm...errr...

What is the s/n (first 5 digits of 8) & date code of your unit.

==========

Hot diggity dawg!

Almost a year late, Radio Shack's "Scope Probe" (#22-310) has finally hit the shelves for a hundred bucks, US.

Get 'em while they're hot! I'd say this is one of the hottest deals to ever hit the market for the serious hobbyist, electronics student, experimenter/hacker, AND pro shop. Noooooo, nothing beats a REAL oscilloscope, but the ProbeScope stands on its own merits and is not diminished in importance by a "real" scope.

The ProbeScope can be used all by itself with its tiny LCD display, but its real power comes out when it's connected to a serial (comm) port on a PC/compatible computer. Not only does it do darned decent as an analog scope, it becomes a digital storage scope when connected to a PC. Complex waveforms can be stored in files; something that $500-$1000 "real" scopes don't usually do.

A hundred bucks may be a bit steep for many hobby pockets, but there is no arguing the LOW COST of such a powerful educational tool that can help take the hobbyist and wannabe-pro to ever greater heights.

The ProbeScope, in tandem with Radio Shack's PC Interface Multimeter (#22-168), make for a whopper of a dynamic duo for the electronic test bench for a total investment of under $250. Not too many years ago, $25,000 couldn't have touched the power of these two instruments.

For those who don't know, Radio Shack's PC Interface Multimeter does a boatload of other things besides AC/DC voltage, current and resistance measurements. It has a frequency counter, cpacitance meter, and a logic probe, all built in. And when connected to a PC's serial port, it becomes a full-blown data-logger easily beating out what I used to use in 1980 that cost $10,000 and up.

The ProbeScope and the PC Interface Multimeter are well worth a close checkout by the serious hobbyist; the electronics student; and even the dedicated professional. Yes, I know.....nothing beats today's $10,000 instruments.....BUT......90% of all electronic measurements do

not need that degree of sophistication. It makes no sense to use a $1000 voltmeter to measure voltages in scanners, ham radios, and other routine circuits. Neither is a $2000 oscilloscope necessary to tune home entertainment and hobby radio systems to top notch performance.

Yes, these two instruments definitely have their limitations. The hobbyist is not likely to come face-to-face with those limitations very often, and neither is the electronic student. The pro-shop will need more sophisticated (and costly) instruments from time to time, but not all the time. As an example, say a pro-shop has two electronic workbenches, two full time technicians, and one $2000 oscilloscope, over which the techs fight and argue some of the time.

In this case, a hundred dollar investment saves $1900 and a lot of hassle and ill-will because ProbeScope will meet oscilloscope needs a good part of the time. In fact, the techs just might argue over who gets to use ProbeScope.....and you'll have to buy two!

No matter what....ProbeScope is worth a look.

See the new 1997 RS Catalog, page 152 for ProbeScope and page 150 for the PC Interface Multimeter. These items are also in the 1996 catalog on pages 124-125.

>a good example. Let it go.

Geezus, Joe, is that troublemaker STILL stirring it up? I hadn't realized the fool was all locked up in my killfile/twitlist until YOU replied to 'im and I read your down-home advice to 'im.. I was wondering what happened to 'im. Forgot all about 'im after he got booted off his Humber College ISP and then kicked off AOL right after that. You know.....come to think about it, that ol' boy has been booted off more forums and ISP's than most folks ever visit in a lifetime. You'd almost think he had bad breath or something. But it was nice to forget all about the danged fool for a while.

But I see he hasn't forgotten about me. Kinda sorta sounds like an obscession, if you ask me. I mean, dang, man, he gets all lathered up when I talk TO 'im; when I talk ABOUT 'im; and worst of all when I don't mention 'im at all. Can't win fer losing with that imbecile. I reckon my twitlist is just the right place for the peckersnap. Seems he wants some of me so bad he can taste me. heh heh heh heh.

And the real funny thing is.....I GET to have me some of HIM without having to do *anything* at all. For free. I would guess from the sound of his sniveling above, that someone caught 'im bent over and hosed 'im a little. And then I get the blame for it????? Ha ha ha ha ha ha ha ha ha....whoooooeeey!

Reminds me of a big ol' carp fish I caught down on the James River arm of Lake Bull Shoals in SW Missouri one year. I was sitting there baiting up a hook on one rod whilst another rod was laying off the edge of the johnboat with a bare hook, mind you, dangling just outa the water. And suddenly the water erupted and boiled and a big ol' fool of a fish leaped clean outa the water; gobbled that bare hook and made off with it like a striped-assed ape. I couldn't believe my eyeballs! Took me a half an hour to land that sucker only to find out he was a derned ol' carp. Weighed in about 25-lbs as I recollect.

And now I catch me another one, even more worthless than that danged ol' carp fish. This'n is going down in the record books, I'll tell ya what! But what exactly do I tell Boone & Crockett that I caught? I can tell 'em it came out of Lake Rec-Radio-Scanner; they won't mind that at all, but I gotta have a name for 'im.

A Duffish?

<giggle> <titter> <cackle> <snort> <gasp> <wheeze> <horselaugh>

Oh well. <sigh> Back to scanners and scanning. :-))

ROTFL!

I *love* it when some `droid' ends up costing himself more just because of stupidity. (The manager of one of our `local' Rat Shacks and I have an `understanding'. For me the danged stickers are basically useless since I'm not one to drag around a catalog with me everytime I drive the 32 miles into town and just *might* drop in. So... He just takes it off and absorbs the tax `difference' and gives me the catalog. Helps keep both his and my blood pressure down.)

If the channel starts with 2 (2 Echo), it will be on North Net
frequencies.
2 Echo Anahiem FD
2 Foxtrot Brea FD
2 Hotel Fullerton FD
2 India Garden Grove FD
2 Juliet La Habra FD
2 Kilo Orange City FD
Dispatch on these channels is refered to as "Metro Net"

If the channel starts with 3 (3 Echo), it will be on the Central
Net frequencies.
3 Echo Costa Mesa FD
3 Foxtrot Fountain Valley FD
3 Golf Huntington FD
3 Hotel Newport Beach FD
3 India Santa Ana FD
Dispatch on these channels is also refered to as "Metro Net"

If the channel starts with 4 (4 Golf), it will be on the county
wide frequencies and is most likely to be used by the Orange County
Fire Authority, with the exception of Laguna Beach FD.
4 Bravo OCFA Dispatch
4 Delta OCFA Strike Team Travel
4 Echo OCFA Division 1 Tac (North County)
4 Foxtrot OCFA Division 2 Tac (South County)
4 Golf OCFA Division 3 Tac (South County)
4 Hotel Laguna Beach FD
4 Kilo OCFA Wildland Tac (wildland fires)
4 Lima OCFA Division 1 Secondary
4 Mike OCFA Division 2 Secondary
4 November OCFA Division 3 Secondary
4 Oscar Airport Tactical
The Dispatch on these channels is known as "Orange County Fire"

Hope this helps. EMAIL me for any questions regarding the OCFA.

It's reasons like these that cause me to avoid Radio Shack's corporate stores whenever possible. When it comes to "nickel and diming" the customer, they're the worst I've ever seen. You know...stuff like not putting a second phone jack on the back of their answering machines to plug your phone into like every other manufacturer does. Why do they do this? So that you'll have to spend an additional $4.95 on a dual-adapter!

$300 and no catalog? I would have told Sammy Salesdroid to forget it and bought elsewhere. If you're fortunate enough to have Radio Shack "dealer stores" in your area, go there. These are privately-owned franchises, and pleasantly void of all the corporate nonsense that you find at the "company" stores.

3048. Preview of RFD

Newsgroup: rec.radio.scanner
Date: 1996-08-29 00:00:00 UTC
From: payner@millcomm.com
Message-ID: <50454b$ooj@tribune.mayo.edu>
Source record: 225094

I submitted the RFD today for the new and improved rec.radio.scanner. Here is a preview of it. If you wish to comment on it, please do so to the group. Do not waste mine or anyone else's time with flaming each other under this topic.

Please do not post to news.groups until the official word from uunet!!

Tim

=========Copy of E-mail sent to newgroups@uunet.uu.net =============

From: Tim Payne (payne.timothy@mayo.edu)
Subject: RFD: rec.radio.scanner reorganization
Newsgroups: news.announce.newgroups, news.groups, rec.radio.scanner, alt.radio.scanner

REQUEST FOR DISCUSSION (RFD)
unmoderated group rec.radio.scanner.freqs
unmoderated group rec.radio.scanner.for-sale
unmoderated group rec.radio.scanner.mods
unmoderated group rec.radio.scanner.misc - for all non-scanning stuff like GPS
moderated group rec.radio.scanner.moderated

newsgroup lines:
rec.radio.scanner.freqs Exchange of scanner frequencies.
rec.radio.scanner.for-sale Advertisements of new and used equipment.
rec.radio.scanner.mods Requests for and procedures for ways to modify scanning equipment.
rec.radio.scanner.misc For discussion of things related to, but not, scanning (i.e. GPS).
rec.radio.scanner.moderated Same as existing rec.radio.scanner but moderated to remove off-topic posts.

This is a formal Request For Discussion (RFD) for the reorganization of the scanning related newsgroup rec.radio.scanner. This is not a Call for Votes (CFV); you cannot vote at this time. Procedural details are below.

RATIONALE: all groups

There has been a huge increase in posts to the rec.radio.scanner group over the last year. What was once a great forum for the exchange of information for the scanner hobbyist has become a nearly unreadable list due to the volume of off topic noise. The new hierarchy will allow the groups rec.radio.scanner.* to once again become a useful forum, as well as keep out the unwanted posts.

CHARTER: rec.radio.scanner.freqs

Currently, any requests for or postings of frequencies are placed in rec.radio.scanner. The needs of the hobbyist would be better met if he/she could go to one group and know that their request / post was being read by the correct target audience.

END CHARTER.

CHARTER: rec.radio.scanner.for-sale

Currently, any requests for or postings of used equipment are placed in rec.radio.scanner. The needs of the hobbyist would be better met if he/she could go to one group and know that their request / post was being read by the correct target audience.

END CHARTER.

CHARTER: rec.radio.scanner.mods

Currently, any requests for or postings of modification for scanners are placed in rec.radio.scanner. The needs of the hobbyist would be better met if he/she could go to one group and know that their request / post was being read by the correct target audience.

END CHARTER.

CHARTER: rec.radio.scanner.misc

Currently, any posts relating to scanning, but not scanning itself, are placed in rec.radio.scanner. The needs of the hobbyist would be better met if he/she could go to one group to get this 'fringe' type information.

END CHARTER.

CHARTER: rec.radio.scanner.moderated

The current volume of noise in the rec.radio.scanner group is out of hand. By offering a moderated group, the readers that do not want to be exposed to the off-topic posts would not be forced to. The off-topic posts in rec.radio.scanner have also been adult in language and topic, and many of the readers of the group are minors.

MODERATOR INFO: rec.radio.scanner.moderated

Moderation Policies:

The moderator(s) of rec.radio.scanner.moderated will uphold the charter of rec.radio.scanner.moderated by rejecting articles that do not conform to it. He/She will be required to act without personal bias toward any article, and only reject those articles that clearly violate the charter.
MODERATOR INFO: rec.radio.scanner.moderated

Moderator: Not decided. Will be defined during RFD.

END MODERATOR INFO.

PROCEDURE:

This is a request for discussion, not a call for votes. In this phase of the process, any potential problems with the proposed newsgroups should be raised and resolved. The discussion period will continue for a minimum of 21 days (starting from when the first RFD for this proposal is posted to news.announce.newgroups), after which a Call For Votes (CFV) may be posted by a neutral vote taker if the discussion warrants it. Please do not attempt to vote until this happens.

All discussion of this proposal should be posted to news.groups.

This RFD attempts to comply fully with the Usenet newsgroup creation guidelines outlined in "How to Create a New Usenet Newsgroup" and "How to Format and Submit a New Group Proposal". Please refer to these documents (available in news.announce.newgroups) if you have any questions about the process.

DISTRIBUTION:

news.announce.newgroups, news.groups, rec.radio.scanner, alt.radio.scanner

Respectfully submitted, this 29th day of August, 1996.

Tim Payne
payne.timothy@mayo.edu

========== end copy ==========

3050. FS: Minitor II with NYC PD freqs

Newsgroup: rec.radio.scanner
Date: 1996-08-29 00:00:00 UTC
From: footage@well.com
Message-ID: <footage-2908961006310001@footage.dialup.access.net>
Source record: 225096

I offer a Motorola Minitor II, bought 1990, very good to excellent condition. Crystalled as follows:

F-1 470.8375 (NYC Police SOD/ESU) CSQ
F-2 476.7375 (NYC Police Citywide 1) CSQ

With it comes a scan board and extra crystal for 470.8625 (NYC Police Citywide 2/Traffic) and drop-in charger. No nicads are included; I have been operating on alkalines.

Tuned, aligned and checked earlier this week by the excellent crew at Brinkley Electronics.

Price: $150, UPS COD shipping included.

Please respond by email only to:

Rick Prelinger

>I get a lot of static on different freqs because of the phone.

That static is your phone transmission. That's the whole point of spread
spectrum... the transmission is (pseudo)randomly scattered across a band.
The phone jumps from one freq to another, quickly, making it pretty much
impossible to decode unless you can predict the hopping sequence.

rimfire@awwwsome.com (Garry Hobart) wrote:

>Get a clue, Bill. YOU are one of the main reasons, for the call, to
>moderate this group!

Oh really now? Ok, let me challenge your cognitive and recognitive capabilities to show where I instituted, started, or launched ANY of these so-called "reasons" for the call to moderate the group.

Fact is......I am not the aggressor. I came here to the group to contribute to the arts and sciences of scanning and to learn from others. I made one contribution after another, and received vile, vicious, nasty attacks in return by people like John Mackey, Hugh Duff, Danny Browning, and others.

THEY persisted. Kept it up. No let up in sight.

If my "failure" to ignore them is your "reason", then indeed, you need a moderated group where aggressors are not permitted. If I were the moderator, I would moderate exactly like I do the FidoNet SCANRADIO forum where aggression is intolerable and even one offense gets the perpetrator promptly evicted.

The principle is simple. Without aggression, there can be no trouble.

On the other hand, if freedom of speech is such a value that all are permitted and encouraged to use it.....like John Mackey, Hugh Duff, Danny Browning, and others..........then that very freedom will also include, without argument and without dissent, yours truly. I will -=TAKE=- that freedom, even if it is not "granted" to me.

I'm talking two way streets here, pal. What's good for the goose WILL be good for the gander....now, and at all times, in my books.

Period.

Then maybe I am wrong Glenn. Your ISP told me they were going to restrict
your access after you made so much trouble AND were soliciting for young
gay boys on rec.radio.swap. Only a few days later you SUDDENLY stopped
ALL postings & never returned.

> PS, we can get to your obscene illegal activities on my local repeater

Oh really, I didn't know you had a repeater. Which is yours? What do you
claim I did on your repeater?

3061. Re: ~~WANTED~~ Mutual Aid

Newsgroup: rec.radio.scanner
Date: 1996-08-30 00:00:00 UTC
From: n9jig@TheRamp.net
Message-ID: <n9jig-3008961237240001@news.TheRamp.net>
Source record: 224857

I think the original poster of this thread referred to the 800 MHz band Mutual Aid freqs. They are the same nationwide, although they may not yet be in operation everywhere yet. They are conventional simplex and repeaters, and are usable in all trunking radios that also support operation in conventional modes. The Motorla, Ericsonn/GE, and Johnson radios all support this.

The 800 MHz M/A channels are:
866.0125 (Calling Channel)
866.5125 Tac-1
867.0125 Tac-2
867.5125 Tac-3
868.0125 Tac-4

The above all use PL 156.7 nationwide.

Other Public Safety Mutual aid channels include:
154.265, 154.280, 154.295 These are set aside for Fire operations between different agencies. They may not all be used in a specific area, or different channels may be used as well.

155.475 This is a nationwide Police mutual aid channel used in most states. In IL, we call it ISPERN (Illinois State Police Emergency Radio Network), and it is in almost every state, county, and local police car. WI calls it WISPERN, IN calls it ILEIN, and some states call it NLEEF (National Law Enforcement Emergency Frequency)

While most states have some sort of statewide net, these are not common the the country as a whole except for those above. IL used to use 39.50 as a statewide rural law net, IN uses 155.130/154.890, OH had 39.58, and NB has a widely used multi-channel Low Band net for Police (39.90), Fire (29.98) and EMS (39.82)

Florida had mutual aid freqs in each operating band, and California has CLEMARS, which is several different frequencies for mutual aid.

In article <502e08$ais@madeline.INS.CWRU.Edu>, dg715@cleveland.Freenet.Edu (David Mark) wrote:

** Mutual Aid frequencies are NOT the same across the country, and
** a moment of thought should tell you that. How can they be the
** same when some agencies are on low band, some on high band, some
** on UHF, some trunked, etc!?

Source record: 224862

9913 is a Belden number, another company may be using it as a reference
though...

9913 is very good cable, but you are right, it is difficult to work with
due to its rigidity. I have used "Super-Flex" with good results. It is
similar to 9913 in size but is more flexible and easy to work with.

For a scanner, if you have a run of less than 100 feet, regular RG8 shoud
be fine. I have noticed no difference with 9913, RG8 or even RG58 in my
shack, with runs of 50 feet. I wouldn't waste the time or effort on 9913
unless you really need it, such as for professional installations
(Police-Fire-Business etc), EME, or very weak signal applications.

In article <500ia8$iu8@earth.usa.net>, mikenet@earth.usa.net (Michael
Cunningham) wrote:

172.375 Angeles NF
169.950 Angeles NF
172.575 Angeles NF / SMNRA
171.725 Angeles NF / SMNRA

I've been hearing a lot of air activity on Guard and AirTac 3. As you'd expect, the South Zone freqs have been busy (--- HINT --- when aircraft are dispatched on 168.625, they are usually given a contact frequency). And of course, there's been lots of admin traffic on the ANF freqs...

Depending on where you are, you may hear the South Zone comms better on their links (415.525 - dispatch, 415.550 - air)

As long as you don't post supplementary information
that has been published (and therefore copyrighted) by
someone else, there is nothing wrong with posting any actual
frequencies.

>The only common sense restriction I could think of is that cellular phone
>and cordless phone frequencies should not be listed since monitoring them
>is illegal.

Information about illegal activities is not in
itself illegal (in the USA). If you don't wish to post such
frequencies and that is your reasoning, then it is clearly
your choice to do as you please. But there is no law in the
US that prohibits publishing frequency information for
services that are legally protected from monitoring.

Could be. I'd try again. My own website was "gone"
for several days because my ISP had serious equipment
problems. It happens...

Actually, 73 technically means "best regards". 88 means "love and
kisses". There was some talk among YL's (young Ladies) about using 33
as a salutation between themselves, but I don't think it caught on!

If you see "de", that is a CW (morse code) abbreviation for "FROM"

<32272391.6572@anywhere.edu>...

> No Glenn, sounds like you & Biill lose.

What did I lose? Is this a competition John? I merely pointed out the
faults in your ramblings. I am not here on a win lose basis. I just
got tired of your months of rambling lies.

> Evidence was presented, Bill choses not to disprove it.

That was my point John, you presented no evidence. I didn't see Bill deny
anything he just won't hand you the facts though he told you where they
were. You just aren't bright enough to get them the easy way.

> > Seeing you want to seek out truth and justice why so quiet on the lie I
> > called you on?
>
> Really???? What was that??

Selective memory loss again, ehh John. Ahh, you missed the post? Check
Dejanews.
Is it drugs, alcohol or lying. That is the problem with your fabrications
and lies John.
When you tell the truth you don't have to try and remember what facts you
made up.
Try it sometime.

> > You know, where you said I caused problems and had my access restricted

restrict
> your access after you made so much trouble AND were soliciting for young
> gay boys on rec.radio.swap. Only a few days later you SUDDENLY stopped
> ALL postings & never returned.

Let's tell it like it was John. I took a disagreement to E-mail and you
complained to my
ISP about my E-mail. Remember, you couldn't take it and you were calling my
ISP pleading with them to stop my E-mail? As A favor to them I let it drop
and

left you alone. Not only are you wrong but you are a liar.
The real John comes through when you bring up the soliciting for young
males.
That happened later on John. My ISP investigated the incident. They would
never
say such a thing. Shall we bet $2000 they never told you anything close to
what you
posted above??
Why do you throw it in? Memory problems or lies? As everybody knew the
solicitation was a forge. You certainly did. But hey John, you will do and
say anything to try and distract people from the facts and to avoid the
truth. So hey, put your money where your mouth is John. Do we have a bet?
I bet you $2000 that your statement "Your ISP told me they were going to
restrict
your access after you made so much trouble AND were soliciting for young
gay boys on rec.radio.swap." is a lie. Deal...ready to back your words????

> Only a few days later you SUDDENLY stopped
> ALL postings & never returned.

Ahh, the Mackey lie again. How then did I sell my Pro-43 on there? Oh Maybe

you are wrong again? Maybe you forgot, again.

> > PS, we can get to your obscene illegal activities on my local repeater
>
> Oh really, I didn't know you had a repeater. Which is yours? What do
you
> claim I did on your repeater?
>

My local repeater was a relative term John, I certainly have better things
to do than run
a repeater to be abused by the likes of you. Then again if I was like some
people I know
without any real life, I might do it to try and be a big guy and have
something I could
try and impress others with. I'm not so I don't.

Is this another I forgot thing again? We discussed it before and you
denied ever doing anything
until other that were there backed it up. You were pissed at me and got on
the
repeater calling for me. When I didn't answer you called me some obscene
names
and made other rude remarks. Finally another Ham got on and said he knew me
and
what you were saying about me was news to him. I received a number of phone
calls
asking me who this bozo was that was acting like the stereotypical CBer.

Bottom line John, you are a sad guy that posts BS to try and stir trouble and gain some needed
attention. You keep trying to blame the most recent flamefest on Bill when in reality
you have been one of the chief instigators of keeping it going. Yesterday you remarked
how only 4 people ever contacted you through E-mail at your Fido account. Why would
anybody contact you? I took our last disagreement to E-mail and you cried to my
ISP. You couldn't take it. It isn't open for dispute because if you were such a big
righteous man you would have taken all your past posts to E-mail. You can't handle it
John if you don't have an audience that you can play to. You don't care if 90% of the
audience thinks you are a fool, you just keep dancing for all to see. There are always
a few idiots that will side with you and that seems to be enough to keep you going.

OK John, are we on for the bet? $2000 says you are lying about what my ISP said.

Glenn

3073. New Kentucky Web Server!

Newsgroup: rec.radio.scanner
Date: 1996-08-30 00:00:00 UTC
From: hpeach@pop.uky.edu
Message-ID: <507l6v$6v0@service3.uky.edu>
Source record: 224869

I have placed a new set of Web pages on our server that are dedicated to scanning in Kentucky. If you live in or near Kentucky please check them out. The URL is:

http://www.uky.edu/~hpeach/kyscan.html

I plan to add new things as time permits, but everything there now is pretty much complete. THERE ARE NO FREQUENCY LISTINGS ON THIS SITE. I may add some "value added" listings. I don't plan to duplicate anything you can get from books or CDs. The only thing definate that I plan to add soon is a listing of selected federal/military frequencies for Kentucky.

One final note: There is a "local experts" section (a map where you can click on your area and see a list of people willing to answer your scanning questions about that area). If anyone wants to be added to the expert list, please check out the site and follow the instructions for being added.

> Re: Our Client:
> U.S. Scanner Publications
> Matter:
> Defamatory statements posted on Internet by Larry Van Horn
>and republished by Scan-L

>Larry Van Horn on the Grove Net Internet as "ST Editor" for Satellite Times.

Umm, are these lawyers familiar with USSC
interpretations of the First Amendment with respect to
publishers? Are they aware that critical speech has been
held to be protected, and that even false reports are
protected speech provided that the aggrieved party cannot
prove that there was a willful disregard of the facts?

> Unfortunately, the defamatory statements by Mr. Van Horn were republished
>by the net commonly known as Scan-L. A republisher of defamatory statements
>is equally liable with the original party, and we believe the law would
>support claims against Peter Laws, the individual responsible for posting
>the defamatory statements on the Scan-L net as well as Arkansas. These legal
>obligations also extend to the "Grove Net" as well as Mr. Van Horn
>personally.

I disagree. (I'm not a lawyer, but my
Constitutional Law class wasn't so long ago.) This is a
heavy-handed scare-tactic threat to get what they want. The
chances of the client actually winning a lawsuit appear very
small. In fact, the more threatening the tone, the weaker
the case, usually.

Obviously these attorneys haven't a clue about email
lists, or about the current state of the law regarding
online services and their responsibility for content posted
by their users. Yes, some court decisions so far contradict
each other, but there is now some case law that supports the
idea that SCAN-L bears NO LIABILITY WHATSOEVER.

I hope Mr Laws, the Groves and the VanHorns can
locate (and afford) an attorney who can competently use
current law to protect their rights.

> WE DEMAND that each of the individuals and organizations named above
>immediately place full-page

Personally, I don't think this demand carries any
weight because their threat of criminal action is not
believable.

> We also require that each of the "nets" involved publish on their home
>page, as well as on all user group forums, specific statements retracting
>all of the defamatory statements referenced above and encouraging any
>interested party in contacting each of you to confirm that the original
>statements published on the Internet were false and without factual basis.

They don't have a leg to stand on with this
"requirement".

> Do not underestimate the seriousness of my client's demands. The unilateral

I'm sure the client is serious. I'm also sure that
somebody needs a bit of education.

>knowledge of the potential harm. We fully intend to proceed with all of our
>legal remedies but believe it is in your best interest to publish
>retractions promptly. Please deliver copies of the retractions so we may
>review them first to ensure they do not contain additional false statements.

More veiled threats. If they could really
prosecute, the Justice Department would already be involved.
Since they can't, threatening letters seem to be the next
best thing.

It will be interesting to see how this all turns
out. The courts are still wrestling with free speech and
Internet regulation, so nothing is cast in stone yet. I hope
EFF gets wind of this, too.

3075. Kansas column

Newsgroup: rec.radio.scanner
Date: 1996-08-30 00:00:00 UTC
From: andyb <andyb@qni.com>
Message-ID: <507m8i$89r@suba01.suba.com>
Source record: 224871

September 1996,

Iï¿½m not going to get into the demise of RCMA...letï¿½s just get down to business and discuss scanning!

Since the last issue of RCMA (I thought I wasnï¿½t going to mention RCMA???), I tried to get copies of the columns that WOULD have been in the Journal to each of the Kansas members of which I had addresses. Those columns were written several months prior to their predicted date of publication, meaning that the last column was written about May. The contents of this column comes from info sent to me during the months of June, July and a few weeks of August. Don, Dale, Bob and Bob have sent gobs of material, so bear with me & my attempt to organize it. For what itï¿½s worth, those of you getting this via the US Postal Service should know that your contributions are on the Internet, too. I send all the column to several news groups on the "Web" now that RCMA is no more. Your information can still be read literally all over the world!

One of the Bobs had the opportunity to observe the 800 MHz portable issued to a KHP Trooper. He had most of the channels figured out, and I called some folks "in the know," and filled in the few blanks. The channel list is as follows:
1. Topeka KHP trunked system 856-860.4875
2. CASP Capitol Area Security Patrol (Shawnee Co trunked
3. Shawnee SO trunked system 856.4875 to 860.4875
4. YCAT Youth Center at Topeka (Shawnee Co trunked)
5. KDOT Ks Dept. of Transportation (Shawnee Co trunked)
6. KC KHP trunked system 856-860.7625 & 856-860.9375, no KCK PD channels
7. KC KHP PD trunked system 856-860.7625 & 856-860.9375, with KCK PD channels
8. JO KHP trunked system 856-860.9625, no Johnson County SO channels
9. JO SO KHP trunked system 856-860.9625, with Johnson County SO channels
10. SG SO KHP 856-860.2625, 856-860.4625, 856-860.7375 & 856-860.9625 with SO channels
11. SG KHP 856-860.2625, 856-860.4625, 856-860.7375 & 856-860.9625 with no SO channels
12. Hays PD 856.2125, 857.2125, 862.4875 & 863.4875
13. Future
14. MO Motor Carrier Inspection
15. Conv RPT #1 866.5125 (National Mutual Aid freq)

16. Conv RPT #2 867.0125 (National Mutual Aid freq)
17. Conv RPT #3 867.5125 (National Mutual Aid freq)
18. Leavenworth County 851.5625
19 Leavenworth County 852.5625
20. Leavenworth County 853.5625
21. Car to Car on Leavenworth SO
22. Car to Car on Leavenworth SO
23 Horton conventional repeater 866.7125
24 Corning conventional repeater 868.9250
25 Blue Rapids conventional repeater 866.6875
26 Wamego conventional repeater 867.9375
27 Eskrigde conventional repeater 868.6750
28 Emporia conventional repeater 868.9250
29 Waverly conventional repeater 867.9375
30 Lawrence conventional repeater 868.8625
31 Bonner Springs conventional repeater 868.6750
32 Olathe conventional repeater 866.6875

(Note: Don says that, channel 15 is KHP's portable repeater 855.9625, and 16 is 866.0125, and 17 is 866.5125 in Wichita and KC. In Ellis County channel 17 is 867.5125. The list shown may have a few slight errors then, so be advised. I'll keep trying to confirm what we have. Thanks, Don.)

Bob also has noted that some of the old low-band frequencies are being used sporadically in Troop A...I noticed it, too. My conversations with KHP dispatchers indicate that they still multi-cast important stuff like chases, and have occasion to communicate with Troopers and other state agency units from other areas that donï¿½t have 800 yet. Here at Lenexa PD we donï¿½t have a monitor for their new stuff, so all we have is the 44.940/45.180 monitors. Iï¿½m glad they multi-cast some of the stuff for that reason alone. Thanks for the detective work, Bob.
Dale has done equally well at finding great information. He heard that Troop H is now on 800. (Try 868.9250 at West Mineral, 867.9375 at Independence, 866.7125 at Sedan, 868.8375 at Severy, 868.8625 at Buffalo, 868.6750 at Xenia, and 866.6875 at Virgil...Andy) He says that the Trooperï¿½s cars are still equipped with low-band radios, but thatï¿½s all...not even dispatch has it anymore. Apparently the Troop B cars bordering Troop H are getting the new radios, too.
He says that Salina has been de-bugging new Motorola consoles, but they came up with a new generation of consoles and made the state an offer they couldnï¿½t refuse. Now the newest consoles are being readied.
Next...Norton will be the first KHP dispatch center to lose the midnight shift to central dispatch. Look for this to happen about the first of December. During the transition, there will be dispatchers in Salina and Norton in case something goes wrong. The centralized dispatch system will begin on low-band, and migrate to 800 as the system grows. A 5 to 10 year time frame is projected for total centralized dispatch. Thatï¿½s a long time to wait. Trees add growth rings faster than the government works.
Dale had a question about the frequencies from 866 to 869 assigned to Kansas agencies by NPSPAC. Are they going to be the conventional

(non-trunked) repeaters? The answer is a definite "yes and no."
According to NPSPAC, any agency using less than 5 frequencies must be conventional repeaters. If there are 5 or more frequencies used, they can (must?) be trunked.
Another tidbit he came up with is the fact that the Training Center is Salina uses UHF handhelds for communications. The license on the wall showed 453.3675/458.3675. (FCC spacing should be either .3625 or 3875 for the suffix. Maybe a typo. Iï¿½ve looked through my files and FCC databases, and canï¿½t find anything there. Dale, can you try to verify the frequency? Thanks for your input.
Two more frequencies that Dale has for us are 451.425 for Sunflower Electric, which was real active during a bad wind storm that downed lots of lines, and 151.295 for Wildlife and Parks. As I read his letter, it looks like he hasnï¿½t actually heard Wildlife & Parks on that frequency, but did hear a couple of them talking about their high-band channel. He knows that they are licensed on 151.295, so that might be a good one to monitor. My records show licenses in Toronto (WNJS654) and El Dorado (WNJZ705.) Let us know if anyone can verify it.
Doyle has provided frequencies for Dodge City/Ford county:
39.180 Countywide EMS/Fire dispatch (excludes Dodge City FD)
463.000 EMS to hospital
463.050 EMS to hospital
463.150 EMS to hospital
154.980 Dodge City PD
155.700 Dodge City PD Tac channel
154.310 Dodge City Fire
155.880 Ford County Sheriff
158.730 Ford County Fire (countywide)
462.750 Ford County Paging
464.875 Human Hospital, Dodge City
156.105 Dodge City city government
151.010 Ford County Road Department
159.000 Ford County Road Department
154.650 Ford County Sheriff
154.710 Ford County Sheriff
159.150 Ford County Sheriff
More from Doyle...Hays/Ellis city/county Fire is dispatched on 154.445. He has also heard KHP on 460.1125. (As I recall, that is a link for KHP low-band...Andy) Liberal/Seward County is next:
154.040/158.940 Seward County Sheriff
158.745/153.755 Seward County Fire
158.745/153.755 Seward County EMS
460.625 Liberal Fire
453.150 Liberal Police
Doyle says the above 5 freqs are confirmed by one of their dispatchers. The following 3 freqs are listed in various books, unknown for sure if/how they are used.
453.475 Liberal Police
453.675 Liberal Police
453.700 Liberal Police mutual aid

Hutchinson/Reno County
155.250 Police ch1
154.890 Police ch2
154.950 Police ch3
159.030 Police ch4
154.650 Police Detectives
154.950 Sheriff Tac
155.580 Sheriff Main
154.115 South Hutchinson Police
155.310 Dept. of Corrections main
155.670 Dept. of Corrections alternate
155.650 Dept. of Corrections alternate (could this be 154.650??? 155.650
isnï¿½t a good frequency...Andy)
155.340 EMS & Hospital
163.250 Hospital page
153.770 County Fire ch2
154.235 County Fire Nickerson
154.370 County Fire ch1
154.055 Hutchinson Public Works
154.980 Hutchinson Water Dept
150.935 Reno County Road Dept

More from...you guessed it...Doyle!
Garden City/Finney County
153.70/154.190 Fire
154.085/158.940 City Govt.
154.815/155.850 Police/Sheriff
155.295 EMS
154.725/155.970 Sheriff
153.920 County Govt.
151.010/159.075 County Roads

Concordia/Cloud County
155.715 Sheriff

153.860/158.820 City Govt.
154.770/155.535 Police
155.790/159.090 Police

And now...something from Doyle:
Colby/Thomas County
153.935/155.940 City Govt.
153.980/158.955 City Govt.
154.725/156.210 Police
154.995 County Roads
39.5800 Sheriff

Salina/Saline County
460.575 Fire
460.600 Fire
452.275 Police
460.025 Police main

460.175 Police tac
460.375 Police
460.475 Police
462.950 EMS
462.975 EMS
463.150 EMS
155.160 Salina Transit
151.070/159.075 County Roads
460.550 Sheriff
153.875 City Govt.
153.935 City Govt.
155.040 City Govt.
453.0375 City Govt.
453.475 City Govt.
453.700 City Govt.
453.925 City Govt.

Whew!!! Thatï¿½s all Doyle had for this column.

The other Bob has been monitoring the Lawrence/Douglas County system for quite a while now, and has reported that 868.0500 is being used by Douglas County. The dispatcher is all that has been heard to date, so the cars are on 39.220 and/or 867.3375. Dispatch is being multi-cast on all three channels. Bob heard them mention that the Sheriffï¿½s Office will be testing 800 as their main frequency.
During Bobï¿½s monitoring he noticed that the signal level was much lower on 868.0500 than on 867.3375. During the above mentioned tests they told one unit to "go to channel 2 and he was never heard from again. Still only dispatch on 868.0500. He thinks it might be in the county where coverage is poor, or possibly even an uplink from the SO to the transmitter site. As Bob is known to do, he has intentions to drive around as sniff out the transmitter site on his own. Good luck, and thanks for the info.

Well, there are a few other bits and pieces that have been sent in, but this column is way too long already. I promise that next month anything left out this time will make it in. Again, thanks to all the contributors...and thanks for your patience. It has been trying times recently with the fall of so many scanner related information sources. That, plus I have had little time to do much scanning myself, so I have done little to add to the column. As things loosen up around home I hope to get back into active scanning again.

Andy

PS Sorry about the funky spacing and columns. It didn't translate well from one application to this one.

Most anything to do with the president will be digitally encrypted by the Secret Service. Your best bet is to listen to the police freqs. of whatever town he is in or goes through.
However, you can try SS freqs. Charlie:165.375 and Baker:165.7875 for some in the clear early stuff.
Phil

Michael....do your scanner have Search, spelled "search"

If so MIKE....search the 44.00 to 45.00
151.00 to 152.00
122.00 to 123.00
153.00 to 155.00
488.00 to 491.00
33.00 to 35.00
and make note which ones apply....

evidently you don't have a BCAT 300....or the newer bc's
which have fire button to push and watch and make notes....
the old bearcts used to do the capture ... was that the
bc 210....too many to remember.

With perhaps the widest distribution of any amateur radio "magazine" in the world, www.hamradio-online.com is now being read in 43 countries around the globe. And its free, self supported by us and you, our readers who contribute great feature stories for this online magazine.

If you haven't paid us a visit, please stop on by and have a look around. There's lots to see - from feature stories all the time, to real-time propagation conditions, auroral conditions, meteor scatter info, disaster situation reports, newsletters from amateur organizations throughout the world, and our vast library of nearly a year's worth of online articles. And we allow reprinting of almost everything in club newsletters and other non-commercial publications and web sites (please see our reprint policy, online).

And watch for more cool stories and new features over the coming months. We already have a great line up of stories for September and October - and we plan to add some neat Java-based features as well.

I was wondering if someone out there knows what makes the 3000 a better scanner than the 2500? Ignoring the firmware changes for a moment, I'd like to concentrate on the RF section...

Specifically, what did Uniden learn and change to solve the problems? Were the IF frequencies changed? Did they use better components? Electronically, what changed between these two models to make the 3000 such a superior unit??

p.s. I have a copy of the 2500 tech reference manual, but have yet to see the 3000's.

Any recommendation would be suspect without the advisor knowing more
about your setup.

1. Does your receiver have a 50 ohm or Hi-Z input?
2. What type of antenna and feedline are you using?
3. Are you adept at building electronics equipment?
4. How much are you willing to spend for a tuner?

I have had many people interesting in moderating or at least helping to moderate the group. SOME of us are tired of all the garbage in here.

Here are the people that are seriously interested. Perhaps we can keep this thread unpolluted, and use it for useful, intelligent discussion of a pertinent topic.

Michael Alexander - malex@kersur.net
Dave W. - pworrell@cris.com
Gus - lgus@hub.ofthe.net
Tim Payne - payner@millcomm.com

All of these people are serious about moderating. I think we should choose 2 or 3 (or even all 4). All 3 of the people seem genuinely sincere about upholding the charter of the new group.

If anyone has worthwhile concerns or opinions about these readers, please post them. I want to choose the best people for moderator.

THIS IS NOT THE PLACE TO DEBATE ABOUT THE VALIDITY OR USEFULNESS OF A MODERATED GROUP!! (yes, I meant to yell)

Thanks for your time!!

Tim Payne

I have had my BC200XLT for 8 years and periodically I have a similar
problem in that it will not turn on even though the batt pack is fully
charged. I can get it to turn on by plugging in the unit while I turn it
on then unplugging it while it is on. The problem goes away within a week.
Returns maybe 4 months later. You may want to clean the contacts on the
batt pack. Good luck.

I guess I'm now an "insider" so here's my info.. Last years catalogs had a $3 price but had a $3 off coupon on them. This year, it's $3 but actually free unless they think you're never going to be seen again. You're supposed to give it to all regular and repeat customers.
Most radio shacks are corporate owned in all metros & important cities per state. Franchises are often part of another store and tend to be more rural. I've heard life is great minus the corporate crap. The corp. stores are all driven for sales & sales gains. Here's a tip: There are untrained, uncaring pinheads waiting to help/fleece you or there are sometimes more knowledgeable, more idealistic salespeople who love the toys and want to serve you. Find the kind ones. It's a commission type job and pays really low. High turnover on the job unless the salesperson is of the two fore-mentioned types. Later!

I E-mailed him with my name as well. And as you can see, my name is
also absent from the list.

One thing that has not been covered yet is this..
Those that can forge posts, (which happens to be the instigator of
most problems) can bypass moderation anyway.
Knowing this, does it not narrow the rationale of moderation to more
of a control issue, rather than a clean up effort?
Just a thought.

The actual frequency can't be copyrighted. If some list has tagged the frequency with the local "slang" for it like "Control 1", "records", "tactical", etc, you should only include such information that your have personally heard. Then no one can say you stole their list.

Although I do not know Brian or the person who originally posted the initial message in this thread, and in no
way am I casting any aspersions upon either of the two gentlemen involved, I must agree with Brian regarding
the unsavory practice of some freelance insurance adjusters, board-up companies, and disaster recovery
companies, who descend upon disaster-affected families in the heat of the moment, when the families are
ill-prepared to make rational decisions regarding such issues as property board-up, clean-up, and damage
assesment offered by such persons who give new meaning to the term "ambulance chasers". They tend to make the
caricature of the "Johhny-on-the-spot" attorney look like an angel of salvation, by comparison. I have
witnessed NUMEROUS incidents where such "crews" show up without being called by the property owner, to attempt
to extract a contract from the affected families. Such services end up being far from the best deal that the
owner could obtain, given the time to recover from the incident, and the opportunity to browse through the
yellow pages. Although I am only representing myself here, and in no way am writing this in

representation of
my organizational affiliation, I felt that another opinion was needed here, from a person with similar
credentials. I am, and have been, a public information officer for the Orange County Chapter of the American
Red Cross, since 1989. I am also currently the department chairman for my function (I am a volunteer). I have
also served the American Red Cross for weeks in the floods of 1993 in the midwest (Iowa, Illinois, Missouri),
and the Northridge earthquake in the San Fernando Valley, and feel qualified to note that many unscrupulous
types always appear on-scene to benefit economically from the tragedy of others.

Anyone offering their monitoring services should clearly identify whether their services are being
solicited by such unsavory types. Your conscience will then assist you in making an educated decision.

There is nothing more disgusting than to see the owner of a burned-out home, who has just lost
everything, being accosted by one of these vultures.

These opinions, as previously stated, are my own, and do not represent those of the American Red Cross, or the
Orange County Chapter of the same agency.

Dan,

I am interested in the Pro-39. I 15 years old, a new ham just starting out with ARES and would like to use it to monitor local emergency services. If you can give me until September 12, I can offer you $100. I know it's not much, but maybe if you're willing to take a bit of a loss...

Re: Our Client:
U.S. Scanner Publications
Matter:
Defamatory statements posted on Internet by Larry Van Horn
and republished by Scan-L

Gentlemen:

This firm represents U.S. Scanner Publications in connection with defamatory statements posted by
Larry Van Horn on the Grove Net Internet as "ST Editor" for Satellite Times. On August 18, 1996, Mr. Van Horn wrote an extensive letter and posted it to "scanner user groups" regarding the affiliation between USSN and RCMA Scanner Publications and the relationship between USSN and its writing staff. The letter also incorrectly described relations among USSN and its subscribers. Enclosed are copies of a portion of the Internet correspondence, including the original posting to which I make reference.

The statements regarding the treatment of subscribers by U.S. Scanner Publications are entirely
false. Mr. Van Horn states that prior subscriptions to USSN were not honored when it was
acquired by U.S. Scanner Publications. In fact, the opposite is true. All subscriptions to USSN were honored in full, plus two issues were added.

Mr. Van Horn also states that the writers groups for USSN had been fired or, alternatively, were on strike. Again, this is entirely false. When U.S. Scanner Publications recognized it was unable to pay outstanding obligations to its writers, it promptly informed the writers groups that it was unable to pay for services rendered but fully intended to pay all fees owed as soon as possible. Copies of the correspondence relating to the relations between writers for USSN and the RCMA group are enclosed.

Unfortunately, the defamatory statements by Mr. Van Horn were republished by the net commonly known as Scan-L. A republisher of defamatory statements is equally liable with the original party, and we believe the law would support claims against Peter Laws, the individual responsible for posting the defamatory statements on the Scan-L net as well as Arkansas. These legal obligations also extend to the "Grove Net" as well as Mr. Van Horn personally.

The defamatory statements have resulted in a significant number of calls to U.S. Scanner Publications as well as an ever growing number of individuals who are calling to indicate that they will not subscribe until there is some assurance that their subscriptions will be honored and value received in the form of publications.

WE DEMAND that each of the individuals and organizations named above immediately place full-page
ads in U.S. Scanner News Magazine, Monitoring Times and Satellite Times

specifically retracting the defamatory statements regarding treatment of staff writers, the characterization of subsequent writers as scabs and the false claim that subscriptions were not honored when U.S. Scanner Publications took over U.S. Scanner News Magazine. The ad should also specifically state that no writers were fired and U.S. Scanner Publications has committed itself to paying all writers for services rendered when financially possible.

We also require that each of the "nets" involved publish on their home page, as well as on all user group forums, specific statements retracting all of the defamatory statements referenced above and encouraging any interested party in contacting each of you to confirm that the original statements published on the Internet were false and without factual basis.

Although we demand retractions to mitigate the potential damages to U.S. Scanner Publications, we are not waiving any claims for damages. We are in the process of determining the scope of damages and will advise you immediately once we have made an accurate determination of the amount, if any, of ultimate financial injury.

Do not underestimate the seriousness of my client's demands. The unilateral action taken by Mr. Van Horn has and will continue to have adverse financial impact on U.S. Scanner Publications. It is both outrageous and irresponsible that such information could be distributed so freely with the knowledge of the potential harm. We fully intend to proceed with all of our legal remedies but believe it is in your best interest to publish retractions promptly. Please deliver copies of the retractions so we may review them first to ensure they do not contain additional false statements.

Very truly yours,

Roger A. Lenneberg

RAL/kkf
Enclosure

GRANT & LENNEBERG

==========

RE: U.S. SCANNER NEWS AND THE RCMA SCANNER JOURNAL

There is a lot of misunderstanding as to the future of the RCMA Scanner Journal. I hope this letter will clear matters up.

We intend to keep the same format, with the exception that there will be no Regional Editors only State Editors. There will be a separate section in U.S. Scanner News for The Scanner Journal.

The RCMA membership list will continue to be kept in a separate database and will not be made available to anyone, no exception. New subscribers will have the opportunity to indicate if they wish to be RCMA members so they can have an RCMA membership number or U.S. Scanner News subscribers. None of the U.S. Scanner News writers will be replaced by RCMA writers. The two

publications are separate and will be treated as such. Any rumors to the contrary are just that.

Our agreement with RCMA was to honor all the outstanding subscriptions. The cost to us for including The Scanner Journal in U.S. Scanner News will be minimal since we will replace the 12 to 14 page Frequency Forum with The Journal. The cost of the additional mailing will hopefully be offset by the extra renewals we will receive.

A number of entities had expressed interest in RCMA but it was apparent that all they wanted was the mailing list. We were told we were the only ones committed to continuing The RCMA Scanner Journal in its original format.

It is our hope that the RCMA membership would like to see their magazine continued and we feel U.S. Scanner News is the best platform for this purpose. This will expose The Scanner Journal to over 9,000 new readers generating a new influx of members.

Much has been knocked around about this merger. Our intent was to continue The Scanner Journal and in time bring it back as its own magazine. To help preserve the club we asked RCMA writers to continue providing material as before. Perhaps we were not clear enough and I hope you can now see our intentions.

Thank you for continuing to support RCMA.

Playing court now are we? I always thought it was up to prosecution to
present enough
evidence to prove beyond a reasonable doubt. You haven't presented a thing
other
than second hand rumors. Sounds like you lose.

Seeing you want to seek out truth and justice why so quiet on the lie I
called you on?
You know, where you said I caused problems and had my access restricted to
rec.radio.swap. I even bet you thousands of dollars to put your money where
you
big mouth is. I am waiting for your proof that I have ever been restricted
from any
newsgroup. You can't because it is another of the long string of Mackey
lies.

So here is your chance to defend your lie. Prove that I was restricted from
rec.radio.swap.
As I said before, put your money where you mouth is. Name the dollar amount
and I
will bet that amount that you lied about my restriction. Your turn legal
eagle?

grh

PS, we can get to your obscene illegal activities on my local repeater
after we clear up your first lie. One Mackey behavioral aberration at
a time.

Why leave yourself open to creeps like you John. Did you ever considered he
did it for the same reason people lock their doors nowadays? I know three
users
on my local repeater that chewed my butt for giving you the frequency of
the repeater
I use. One remark was "What kind of an idiot are you to give the frequency
to that guy?".
After your behavior on it as you passed through the area I had no defense.
I
made a big mistake.

> And I would NEVER beg you, I would simply assume a different name
> & get on & you'ld never know (just like Fido).

You seem to be confused John. It isn't your name that gets you on trouble
its your actions, abusive behavior and lies.

I've had my UBC3000XLT for about 3 weeks now. It is the best scanner I have owned. If you're interested in hearing cellular, get the UBC3000. I got mine from Javiation. It arrived about 7-10 days after placing my order. They also throw in a list of the undocumented features that are accessible. It has complete coverage from 25MHZ to something like 1300MHZ with the exception of the block from about 550MHZ to around 750MHZ (It's in the bedroom and my wife is sleeping so I can't get the exact numbers now). My favorite feature, even though it is commonly available on the upper end scanners, is auto-storing of active frequencies within a frequency range. If you want any more specifics, email me.

John

Yea one of the problems we have had in the commercial radio field
is wanna be types calling themselves "engineer" & passing themself
off to hobbyists yet they are not. These individuals can be identified
calling attention to themself in open or public forum, answering EVERYTHING
that even mentions them, making accusations with no truth, feeling they
are or should be a leader, & stating they have credentials but refusing
to disclose. They operate on lies & have to belittle others to feel
right.

Hmmm, like YOU Bill.

As I mentioned in an earlier message in this thread the version of the
PRO-26 sold here in the UK (RS Cat 20-9506) and elsehwere in Europe where
done so does have full 25-1300MHz coverage. The 520-760MHz frequencies
are not "missing".

> believe 520 in UK is near cellular, per a contact in Denmark, 470~ is
> a form of cellular!

Nope (although I can't speak for Denmark). UK Analogue celllular is
915.0125Mhz - 949.9875MHz with the mobile 45MHz lower,
870.0125MHz - 904.9875MHz. Spacing is 25KHz although as the channels start
at a 12.5Khz channel you have to use 12.5KHz increment steps as most
scanners will not do 25KHz steps from a 12.5 Offset.

Sounds like a rolling code inversion scheme. The "code" is constantly changing, and the regular beeps are (as I unerstand it) for keeping all the radios in sync. A simple inversion unscrambler won't be very effective, unless you can swing the knob back and forth with the beat of the rolling code...highly unlikely. I have a demo tape from a company that sells it, and I have fooled with trying to do just that, but I don't have the savvy to build it. Maybe someday, though.....

I have a Radio Shack Optimus (7?). Paid $50 on sale. It is dual-firing - with
a nice tweeter and midrange in black bookshelf enclosure. Audio is
excellent and very good on speech and music.

3134. Restrictions on posting frequencies on the Web

Newsgroup: rec.radio.scanner
Date: 1996-08-30 00:00:00 UTC
From: Cliff and Diana Morrison <morrison@flash.net>
Message-ID: <01bb9632$e19cc720$24cdc2d0@morrison.flash.net>
Source record: 224941

Are there any legal or ethical restrictions on posting frequencies on the Web? I've been thinking of putting up a page about my area with my favorites and my guess at what they are.

The only common sense restriction I could think of is that cellular phone and cordless phone frequencies should not be listed since monitoring them is illegal.

There was a posting a few back about scanner frequencies in New Hampshire. I tried to follow it, but the link pointed to empty webspace. I am left wondering if it vanished because it shouldn't have been up there in the first place, or just because of the usual spontaneous combustion of Web pages.

The other problem that we have is people who clearly have no grey matter whatsoever posting from .edu servers. I swear that 90% of the drivel that hits the newsgroups comes from an .edu server. You would think that the universities that spend our tax dollars to put up such a server would spend a little bit more time watching who they let on to them.

I have been reading on-line serveces for many, many years and I have found thet you get what YOU pay for. The ratio of B/S to good information on services like say CompuServe is much better than on the newsgroups. I think it has something to do with the fact that when it's your money paying for each bit of information comming down the wire you tend to think more of the information that you are sending back over that sme wire.

When you have people on the Net, such as Mr Mackay, who are so cheep that they can't even pay the piddly fees that most ISP's charge then you really do end up with what you pay for.

I for one would like so see him locked in a rubber room somewhere where he can cet the help he really needs. I doubt that this will happen, but I can hope, can't I. :)

>Thanks

Sounds similar to the Cycomm VEM encryption system.

The voice is digitized, stored in memory, then "sliced" into multiple
(16 to 64) pieces per second (like cutting up audio tape, only done
digitally). The voice slices are constantly being re-arranged
according to a high bit order algorithm (with some of them read
BACKWARDS for additional variety) then converted back to analog for
transmission over standard bandwidth radio channels and analog radios.
Added to this is a sync burst of data (once per second) to keep the
units in sync.

Depending on the slice rate, it could sound like "Cousin It" from the
"Addams Family" TV show, or bugs talking to each other.

Good luck... if it is this type of encryption, tracking it and putting
it all back together is NOTa trivial task.

Steve

Hi Richard,

I Had the same problem with my AT&T Netscape but it didn't exist with another providers version of Netscape. So it wasn't the Netscape, it's in the configuration. Mine would say the news group is timed out and it couldn't send the msg.

Funny thing was, it was sending the msg everytime I hit the send button which resulted in multiple msgs. Ditto the E-mail which is Eudora Light. Never had the problem with Netscape E-mail, I could compose offline all the time no so w/Eudora Light.

I was able to make a change in Eudora's mail but it requires me to constantly click on then off the online button in the configuration setting.

Previously all E-mail would go out but the screen would state it was never sent, "do I want to send it now". Click on yes, and it'd insist it couldn't send the mail.

Take a look at your configuration, you might find the problem there. Hope this helps.

Regards,
LGS

John,

Since you have decided to add "Legal Eagle" to your already lengthy
list of credentials, you should be aware of two things:

1. One of the maxims of jurisprudence is "He who comes into court
must come with clean hands".

2. In America, there is the presumption of innocence until one is
proven guilty, in a court of law, beyond a reasonable doubt and
a moral certitude.

So, if you want to make accusations, let's have them. Then let's have
some PROOF. Put up or shut up. Put your money where your mouth is.

Heh - that's funny. I suppose the law listing the frequencies we
can't listen to isn't publicly available either? Or how about the
law granting cellular users the rights to use those frequencies!

I see no problem posting lists of frequencies that you've found to
the net. I think it would be in poor taste, though, to simply take
someone else's list and make it available without giving
proper credit. In some cases, it may even be a copyright violation
(but I'm not a copyright lawyer!)

Tim.

(c) 1996 by Bill Cheek <All rights reserved>

"Frequency" is a periodic repetition of something, in this case radio waves. The unit of frequency is Hertz, (repetitions or cycles per second). A frequency of 100 MHz is a radio wave that has 100,000,000 repetitions per second.

The time of a symetrical cycle is always the reciprocal of frequency. Thus the period of a cycle at 100 MHz is 1/1x10^8 seconds, or 10 nanoseconds. The period of a cycle at 1 kHz is 1/1x10^3 or 1 millisecond. The period of 1 GHz (1000 MHz) is 1-nanosecond. The period of 1 MHz is 1-microsecond.

All that said and done, a frequency counter is a circuit with a reference time base against which is compared the the period or count of an incoming signal. If the time base is accurate, then the resultant displayed output will be accurate. While there are many ways to produce a frequency counter, the typical method is to open a gate as measured by the time base, and triggered by the incoming signal, and then "count" the number of repetitions that occur within that gate interval.

Suppose the gate is 1-ms wide and 150,000 repetitions occur in that interval. The frequency would be 150,000 cycles per millisecond or 150,000,000 Hertz or better still, 150 MHz.

A frequency counter is as good as its time base. The time base is as good as the cost. A hundred dollar frequency counter means a $5 time base.....not a great instrument, though maybe adequate for hobby needs. The next important criterion of a frequency counter is its sensitivity, or how little of a signal is sufficient to trigger the gate that measures the reps over that interval. Cheap frequency counters require an RMS signal of about 0.100v or 100-mV, or 100,000-microvolts.. Decent counters can trigger with as little as 10-mV or 10,000-microvolts, while great counters can trigger on as little as 1-mV.

1-mV is .001v or 1000-microvolts..... which, as weak as it sounds, is a very strong RF signal, when you consider that 1 microvolt is sufficient for most scanners to detect without noise. (Full quieting). Thus, cheaper counters that need 10,000 or 100,000 microvolts require

a goshawful amount of signal.

In a simple word, frequency counters are of very limited value to the hobbyist. A cheap one with a real good antenna on it will detect a handheld radio pumping a couple of watts at a maximum distance of about 20-ft. A good counter might do well to detect it at 30-40 ft.

The primary purpose of a frequency counter remains as a laboratory or electronic test bench instrument, but the advancement of technology has resulted in passable, low cost counters that can be used to some degree of effectiveness by the casual hobbyist after he has a little experience.

Good for miracles? No. Good for detecting the frequency of a stadium security guard's handheld radio? Yes, under certain conditions. Good for detecting the frequency of base station radios? Yes, under the same more or less severe conditions. A 100-watt base station is not likely to trigger an average frequency counter beyond a distance of maybe 100-ft, give or take.

The hobbyist will fail at frequency detecting about 7 to 9 times out of ten. If that rate is tolerable, then a frequency counter can be a fun and effective tool.

Hobby grade frequency counters should never be used to align reference oscillators in scanners and other radios because they are not sufficiently accurate. Hobby grade counters have accuracies of on the order of 1 part in 10^5 or 1 in 10^6. Figuring 1 in 10^6, that means an error margin of 100 Hz at 100 MHz. or 10 Hz at 10 MHz. Most reference oscillators require an accuracy of +/- 5 Hz or less.

Hobby grade counters can be had for roughly $100 while lab grade counters start at $500 and go up. Therefore, it is better for the hobbyist to focus on a good quality scanner and a good antenna before considering the investment in a frequency counter.

There you have it, in a nutshell.

What about choosing none? What about just starting your own moderated
forum or even a moderated list?

>If anyone has worthwhile concerns or opinions about these readers, please post
>them. I want to choose the best people for moderator.

You choose? How do you get to do the choosing? I don't recall a "Tim
Payne" being elected Boss Hawg. When did that happen? Was I asleep
or out to lunch?

>THIS IS NOT THE PLACE TO DEBATE ABOUT THE VALIDITY OR USEFULNESS OF A
>MODERATED GROUP!! (yes, I meant to yell)

OH YES IT IS!!!! (And I meant to yell, too.) There dern well SHOULD
be an open debate/discussion about moderating this forum. Who the
hell are you to slip in the dictatorial tactics? Guess we're fixing
to find out what a moderated forum is all about, judging from your
strongarm approach.

But I still want to know who you think you are, or who annointed you
the Boss Hawg. And in any case, if the move to moderate this
newsgroup is legitimate, then I AM TO BE A LEGITIMATE CONTENDER. I
thought I had made that perfectly clear.

>>>> > to mind)?

There is a system called Tracker that has GPS and a control head that
you can operate to send messages to the dispatcher.

You can scroll to say "Traffic Stop" and press the send button this
would send a message to the dispatcher that you are doing a traffic
stop and would both show your location on the map and print out your
location on the screen.

Tracker is also made to dispatch calls too.

I work for a towing and recovery company and we have used Tracker for
the last few years and found it excelent.

Michael Cunningham (mikenet@earth.usa.net) wrote:
: I plan on using 9913 coax when I put up scanner antenna up. I have read
: some messages that 9913 can be difficult to use because it is so stiff.

It is stiff (its a solid copper center conductor of moderate size).
Whether that's a problem or not depends on whether you need to
bend it, run it into tight places, etc.

: I have recently seen some ads for "flexible" 9913 coax. It says it is
: "9913 foil + 95% braid 2.7 db @ 400 Mhz". Would it be better to pay a
: little more for the "flexible" 9913 or is the regular 9913 really not
: that difficult to work with as long as you don't bend it to much?

I tend to like the flex 9913 coax, but it does tend to cost more.

As other people have pointed out, for short runs 9913 may be overkill,
depending on the frequency of interest.

The September issue of Monitoring Times has an interesting story about scanners in Kentucky on page 6. It's titled "Abandon all radios, ye who enter here...".

From: hpeach@pop.uky.edu
Message-ID: <508dg6$f5f@service3.uky.edu>
Source record: 224770

Last week while traveling a local interstate, I noticed a Ford Econoline van with a fiberglass, extended headroom top. The van was attractively painted, not plain, government issue white and could have been driven by any family of 4 or 5. The only reason I gave it a second glance was it had a black, VHF low band whip on the back bumper and two other non-broadcast band antennas mounted in the middle of the fiberglass top. It was then I noticed that the van had a US Government license tag starting with the letter E (later verified as being a Department of Energy plate). The van had deep tinted windows except in the front and you could not even see the sun through them which I eventually decided indicated there was a "box" of some sort mounted in the van that enclosed everything except the driver's area. Other than driving several miles below the speed limit I did not notice anything unusual and continued on without giving it much more thought.

Several miles further up the road I came upon two Semi trailer trucks (also painted in attractive colors - not government issue white) off in the emergency lane and two more vans just like the one I had passed, but different colors, pulled in at an angle in front and behind them. Several men were out walking around the vehicles. All men were dressed in golf shirts and other street clothes. These vans, the semi's and their trailers all had US Government tags that started with E. As I drove on up the road I came upon yet a fourth similar van with DOE tags also driving below the speed limit, who was ahead of all the others.

The question is, what did I see? Was this some sort of DOE convoy? Was this part of the legendary Nuclear Transportation Safety Network? A brief, hasty attempt to find them on my car's scanner found nothing. The roof-mounted antennas were rather ordinary, but I could not really get a feel for which band they operated on. I would guess one was a 1/2 or 5/8 wave antenna for VHF high band. The other could have been either a loaded UHF or a cellular antenna (less the center coil). By driving below the speed limit it was difficult to stay behind them without drawing attention to yourself - which I suspect was their intent. Any ideas or similar experiences?

In the UK you can buy "DECT" cordless phones which are similar to
GSM phones but for the home. DECT is a European standard so you
may not have it in the States.

Take a look at WWW site under SOHO to see what they are all about.

trunking is a way of giving all departments in a city (or many unrelated users) access to radio resources without assigning each a discrete frequency...they are assigned a talk group or "virtual channel" by the trunking computer...all the parks department may be on "G", while the Police may use "A"....may be on the same frequencies...only the members of the talk group A or G can hear what others in that talk group are saying....the conversations may be heard on ANY of the frequencies in the trunk group...find the data channel then from there you can usually figure out what the othe frequencies are....example 858.7375 is data channel then 856., 857., 858., 859., and 860.7375 are frequencies used by the same system!! you will also hear phone patches on many trunked systems!!

>PLUS, I have a firm size #15EEE boot.

I'd like to suggest a couple of things for the moderator selection:

First, I think that we should select several people who work as a team of peers - NOT a chief and assistants - to moderate this group. This would control the concern that some of us have that having a moderator would create a 'petty dictator' situation.

Second, I'd suggest that each of the interested parties post a short explanation of who they are and why they want to be moderator.

Lastly, I'd suggest to all that the selection criteria should be related to moderating rather than to radio knowledge alone. Certainly, the moderators must understand the content, but their real value is in their judgement and their sense of nettiquette and fair play. The moderator should be someone who stands back from the debate and keeps a rein on things, not an 'expert' who wants to put their 2 cents' worth into particular discussions. A moderator ought to be like a baseball umpire - doesn't say much, just calls 'fair' or 'foul' on each play. I think we should look for people who have a track record of civil, restrained participation, and who favour reason over brute strength, rather than those with technical genius or proven desire to expound to the world.

I'm sorry if this post ought to be in the news. newsgroup hierarchy somewhere. I'd also like to thank the person who wrote the RFD and took action to get us out of this mess.

Regards,
Paul

From the outside, look closely at the store sign. If it is a dealer store, you will see a small "DEALER" in black letters in the lower-righthand corner of the "Radio Shack" sign.

From the inside, it will be even more obvious. An independent dealer will sell other brands of similar merchandise (CB radios, antennas, batteries, scanners, etc.) right along-side of the usual Radio Shack models.

Let me get this straight -- USSN threatens Peter and the University of Arkansas with legal action in a letter from their attorney:

"Unfortunately, the defamatory statements by Mr. Van Horn were republished by the net commonly known as Scan-L. A republisher of defamatory statements is equally liable with the original party, and we believe the law would support claims against Peter Laws, the individual responsible for posting the defamatory statements on the Scan-L net as well as Arkansas."

The letter scares Peter, and he shuts down SCAN-L. Then, out of the kindness of their heart, USSN offers to host SCAN-L:

"You should also know that we offered to let Peter restart scan-l on pacifiers server"

You *got* to be kidding!!!

The extra BNC on the back of the unit is undoubtedly an output for a communications reciever. This was part of the series of mods you describe. It is tied into the input jack of a communications reciever and you then "tune in" the scanner`s output on the communications reciever. Since the scanner`s output is on a fixed frequency, (the scanner`s I.F. frequency) all output from the scanner will appear at one frequency on the comm reciever.

"Storm Chaser" by Warren Faidley.

The critically acclaimed book is now in it's second printing!!!!

Stunning book includes 100 breathtaking, graphic severe weather photographs of tornadoes, lightning, hurricanes, supercell storms and hail. Also features adventure stories, easy to understand explanation of severe weather mechanics, graphics and extensive glossary. Published by The Weather Channel.

Complete data and sample photos at:

http://www.indirect.com/www/storm5/scbook.html

Or order directly at 1-800-544-6206

FOREIGN ORDERS CALL 313-416-0503

(A free catalog of weather videos, poster, etc. is also available at this number.)

Enjoy!

Consensus so far is that he is bluffing, probably because he's hard up
and desperate. USSN can't pay their writers, and to make matters
worse, they took on responsibility for the defunct RCMA's subscription
obligations.

Sounds like a fiddle string playing high "C" to me......

Ah ha ! A taste of ones own medicine !
What's the matter ? Don't like the dictator slant to that
suggestion ?
Welcome to demorcacy as the FIDOnet views it.

The other fellow hit the nail on the head...wake up and smell the
coffee. YOU are the hub of the suggestion FOR moderation .

>But I still want to know who you think you are, or who annointed you
>the Boss Hawg. And in any case, if the move to moderate this

Didn't you know, there's only one Boss Hawg Scannist Extraordinaire :)

>newsgroup is legitimate, then I AM TO BE A LEGITIMATE CONTENDER. I
>thought I had made that perfectly clear.
>Bill Cheek
>bcheek@cts.com

WE all must consider how a moderator would be selected. Considering
that a democratic vote could be heavily tampered with by means of
aliased ballots electronically or manually (letter post), it would be
impossible to control. I can just see a certain person sitting behind
the keyboard for a week casting aliased votes from an anonymous
server.

Furthermore, how do you punish people who do not abide by the
moderated rules ? Your ISP would be hard pressed to shut you down
from a particular newsgroup for lack of your hard earned cash.
And if the ISP DID decide that your money is not worth the
aggravation, it would be as simple as moving on to another local ISP.
There are hundreds of them willing to take my money here in Toronto.

Food for thought about moderation.
I still say, let Cheek and his followers go start another newsgroup
and moderate IT to death.

==========
FINALLY! A SCIENTIFIC APPROACH TO EFFECTIVE
WEIGHT MANAGEMENT & METABOLIC FITNESS
NOW AVAILABLE IN AMERICA!

P H Y T O ~ S H A P E
Because Nothing Tastes As Good As THIN Feels!
==========

Your body has three primary sources of energy -- carbohydrates, fats and proteins. By taking these three energy sources, your body literally "burns" them and creates the energy needed for everyday life. Athletes know this, and often "fuel up" before a competitive meet.

The problem is that not all of the food we eat is needed by the body. When we consume an excess of energy (food), beyond what our bodies need, the remainder is stored as fat.

The good news is that whenever we do not consume enough energy, our bodies burn that excess fat to make up the difference.

The scientific key to creating safe, effective weight loss is to create an environment in which your body's energy balance is in favour of burning fat. Without a synergistic balance of proteins, carbohydrates, phyto-nutrients, anti-oxidants and botanical factors, that would be very difficult to maintain.

The hardest part is that the proteins, essential nutrients and anti-oxidants we need are all fat-soluble, meaning that they don't mix well with water, yet our bodies' transport system is 90% water! Since oil and water don't mix, science has never managed to create such a powerful weight management program without the use of stimulants, such as caffeine, Ma Huang (ephedra) and other ingredients...

UNTIL NOW!

We tend to feel good about ourselves when we are physically, mentally and emotionally balanced. That's why som many people feel better after a day at the gym, or swimming, or yoga.

However, in today's fast-paced environment, many of us have developed less than nutritional eating habits, and few of us have time for adequate exercise.

With this in mind, and thanks to a revolutionary scientific advancement

called Emusol Micellization Plus, LIFETRONIX has developed what doctors and researchers throughout the world are already calling, "THE MOST EXCITING AND SIGNIFICANT BREAKTHROUGH IN WEIGHT LOSS HISTORY!"... and we call this breakthrough PHYTOSHAPE!

Formulated from a select synergistic blend of pure botanicals, vitamins, minerals, essential nutrients, and special ingredients known to enhance the body's ability to restore metabolic fitness-- such as pure grape seed extract, chromium and other botanical factors, this delicious orange beverage packs in a full refreshing supply of WATER SOLUBLE proteins, fibre, and our exclusive oxygen-based delivery system.

The unique combination of phytonutrients, the oldest source of nutrition on the planet, with the botanicals, the herbs, and the other special ingredients creates a synergism that gives PHYTOSHAPE its UNMATCHED potency. the result?

Y O U ' L L L O S E U P T O 1 4 P O U N D S
I N J U S T 1 4 D A Y S -- FOR ONLY $49.95!

SAFELY ~ PERMANENTLY ~ WITHOUT CALORIE COUNTING
WITHOUT SKIPPING MEALS ~ WITHOUT EXPENSIVE CLINICS
NO EMBARRASSING MEETINGS TO ATTEND!

Just look at what people are saying about the program already:

"I feel fantastic, after just two weeks, I've lost 10 pounds, and almost 14 total inches in my waist, tummy, and hips! No hunger pains and the energy is fantastic!"
(Dorothy Raines)

"This is really incredible! I've been on the program for four months now, and have already lost 65 pounds! And now I actually look forward to being around people, because EVERYONE compliments me on how great I'm starting to look!"
(Tracy Black - W Palm Bch, FL)

"As a healthcare professional, I won't take products with herbal or chemical stimulants... they interfere with my sleep patterns. And in my field, one mistake could jeopardise a person's life. On the LIFETRONIX program, I feel great, and have already lost 14 pounds in just 18 days! Without the excessive cravings for sweets, I'm confident I'll reach my weight loss goal finally!"
(Patrick W Kelley - Lake Worth, FL)

"Wow... Finally a way to get that stubborn last five pounds off. But best of all the INCHES I've lost made me, AND my husband really happy with the PHYTOSHAPE PRODUCTS! Thanks LifeTronix."
(Helen Kovner - Huntington, NY)

---------- HOW CAN YOU GET OFF THE DIETING ROLLERCOASTER?----------
Getting started is as easy as 1-2-3! Just grab a pen and jot down

this important number: 1-800-665-4197 (access code 222-3333)...
that's our 24 hour information system, which will go much further
in detail for you if you want to know more about the PhytoShape
product. Then:

1. Email me right away at: Johnf@emi.net
Be sure to include a daytime phone number, so I can
get back with you. That's my home office, and I'll be
able to help you with Step 2.

Be sure to include a daytime phone number, so I can
get back with you.

(Don't try to hit REPLY to this message, since this is one of
our "email on demand" info-bots, and is not answered by a "real"
Personal Health Consultant!)

2. I'll call you, and connect you to our Customer Services Center,
and we'll get you started!

3. In 3-days, when your product is delivered by U.P.S., you'll be
ready to put an end to the diets, the calorie counting and the
PAIN of being overweight for GOOD!

I'll GUARANTEE it!

Your partner in health,

Given the recent penchant for some folks here to post forged messages and off-topic messages, here are some sources of information that anyone merely interested in talking about scanners should find worthwhile:

The first is a Web site with two FAQs on how to trace forged e-mail/news postings, how to set up killfiles and throw water on flames. It also contains useful info on what to do about combatting lowlife-forged-message posters:

digital.net/~gandalf/spamfaq.html
digital.net/~gandalf/trollfaq.html

The second is a Web site with a lengthy FAQ on net abuse, forgery and how to get a little payback. It also contains several links to other FAQs dealing with various aspects of these problems (like spamming):

www.cybernothing.org/faqs/net-abuse-faw.html.

Hello all,

Does anybody know about easy mods to the Radio Shack PRO-36 scanner?
What I'm really interested is:

1. Simple mods, such as adding/removing a jumper and getting
new/enhanced functionality.

2. Computerized scanning and logging of active frequencies. I once
considered connecting a parallel interface from my PC to my scanner
keyboard connector, monitoring the squelch and writing some S/W, but
gave up due to the large amount of work required. If there were an
easy mod for that, without too much cutting inside my scanner, with
some available S/W, that would be nice. Of course, a reasonable cost
is also required...:-)

When responding, we would appreceate a copy to our email
address in addition to posting here, so that no responses are
missed.

Have you tried Tucker Electronics ??? They have a Web page.

Also, pick up a copy of "Popular Communications" magazine. Many smaller companies advertise in the back and they have better prices.

Hi John,

Several of the Fast Food chains in the DC area have move to 469.0125/464.0125

Most of the Roy Rogers and McDonalds have made the switch over to 469.0125/464.0125 in last 6 months.

From: n0ybc@netdoor.com
Message-ID: <50afqh$u7s@axe.netdoor.com>
Source record: 224823

My wife and I just bought a pair of Bearcat BC120XLT scanners. Mine is for storm chasing, hers is for listening in to me chase while she works (she loves to chase too and misses it when she can't go). Are there any mods for this handheld available? I've noticed in both of ours the audio is a little weak, even when using an external speaker/antenna. Any help is apreciated.

Thanks

Michael

From: jon unruh <unruh@tir.com>
Message-ID: <3228D9F7.1ACF@tir.com>
Source record: 224827

I live 40 miles west of a major city and desire to listen to the 450 uhf police system. I have a BC9000XLT and was using a plain discone style antenna with RG6 cable (120 ft) which provided no luck with reception. I then switched to the GROVE scanbeam antenna and aimed it in the direction of the city,, still no luck. Today I replaced the RG6 cable with wiremans CQ4xl cable (low loss, similar to 9913) there are no adapters in this cable like there was in the RG6.... still no luck. There is no major elevation change btw here and the city. I think I have covered all areas. I primarly listen to uhf and 800 band. Does anyone have any suggestions for me??

Please respond to my e-mail address if your able to assist me as I dont get a chance to review this newsgroup on a regular basis.

By the way I have used another scanner on the same set up with the same results so I dont think its the radio. I am able to pick up the PD on my 2 way motorola mobile radio in my driveway, so I do feel its possible.

Thanks,

Jon

The 'serial' data transmitted that is transmitted by the TSC (Trunking System Controller) is converted to 'parallel' format for further 'scrutinizing' by the uP (micro-Processor) in the radio.

The control channel (Mot anyway) contains (disregarding the sync, error correction/detection and parity fields): a 10 bit 'frequency' code, a 16 bit address (used for individual unit/radio ID or group/fleet ID) and a single bit for 'call type'.

:>repeater calling for me. When I didn't answer you called me some obscene
:>names
:>and made other rude remarks. Finally another Ham got on and said he knew me
:>and
:>what you were saying about me was news to him. I received a number of phone
:>calls
:>asking me who this bozo was that was acting like the stereotypical CBer.

Just for the record here, everyone. I can vouch for the fact that there were extensive discussions on a local Seattle-Tacoma repeater about an individual identifying himself as John Mackey and using John's call sign and claiming to be operating from a mobile unit. He repeatedly called for Glenn on that same repeater, one that Glenn and others, (myself included)) are known to frequent. He was described as being antagonistic and abusive and using language that was patently offensive and threatening. Although I did not hear it, I know the ham who did and have absolutley no reason to doubt his veracity. I understand that the matter was the subject of at least a telephone call to the Seattle FCC office 9lot of good that might do!!) and with the repeater owner.

I'd be suprised if they had all in-progress calls in the entire city ..
that would make for one busy channel! It's probably more like one
channel for all calls in a division. Some freqs to try would be

Air support 507.0125 and Air unit calling 154.8300
I have a pretty good list (something like 200 channels) on my
web site now.

Ken Koller wrote:

Brian:
You asked what 73 means. It comes from morse code, and is the sound "dah-dah-dididit dididi-dah-dah". No matter what language is spoken, (English, Japanese, Russiam etc.) those sounds tell a morse code operator "goodbye".
I am a licensed radio ham in Sydney, New South Wales, Australia. I had to learn morse to gain my "full call" license, but many hams have no-code licences, with less privileges. I am just starting to learn my way around the Web and to use the newsgroups... So I'm a bit of a newbie too! :-)

Tom, it's nothing new. Hams have been doing it on 20-meters and up
for over a decade. CB'ers have been doing it for 25 years. It's only
been of recent times that SWL's and scannists have been able to get
together in near-real-time on these public forums...which are not a
lot different from radio......and I suppose it's only a natural
outgrowth of the ham & CB turf wars. Same mindset anyway.......

>It also pisses me off to no end to see people who have contributed
>FUCKING ZERO to the hobby, go off and flame the likes of Bill Cheek,
>who's contributions to the advancement of the scanning hobby deserve
>aclaim.

It really doesn't bother me. It's like this....suppose you were
hoofing it down the sidewalk and trucked by a steaming dog pile as it
hollered up to you that you're an obnoxious scumball? I'm sure it
wouldn't bother you so much as maybe make you curious about the
audacity of that smoking pile to "speak to you". Now, I'd be inclined
to poke that pile with a stick to see if it squeals and maybe shovel
it up and fling it somewhere farther out of the way.

Other folks would just keep on trucking, maybe. That's fine, except
the next guy could step in it if he wasn't watching where he was
going. That's why I'd be inclined to stop and mess with that steaming
pile a little and get it to yelling so's folks can know it's there.
That's the humanitarian side of me.............

> I may not agree with some of the things Bill says,

Of course not. When you and me were born, our birth certificates did
not point out that we had to agree with each other. I'd bet your
birth certificate doesn't mention me at all..... :-)

>but I respect

Last year, ol' Andy Moss was on this forum blowing and going about me and I had e-mail after e-mail from folks wondering why I didn't come out to confront him. So I did. Which frosted a whole new slew of folks. HOW DARE I DEFEND MYSELF? Geezus.....I wondered how THEY dared let HIM stink up the place.....but they apparently enjoyed it.

That experience rammed home to me that a body cannot please all of the people all of the time, no matter what. So now I just do what I feel best and leave it to other folks to do what they think best. Some sure don't like that arrangement because they'd prefer I do what THEY say. But my Paw always said, "Son, don't ever do what another man tells you UNLESS he's a whole lot bigger than you or is willing to PAY PLENTY for your services." Well.....there ain't many that's bigger than me..... so I've grown to not obey all that well.

Which bothers some folks because they take THAT to mean that I'm out to do the ordering around. Now that ain't so, but some folks can only see black and white and not shades of gray. In fact, I'm right down the middle. I don't obey folks all that well, but I don't boss 'em around, either. I just leave 'em alone and and expect 'em to leave me alone. Which gets us back into the vicious circle all over again, and which is why sometimes I just stop what I'm doing and thump a feller for his time and trouble of going out of his way to mess with me when he'd have been better off attending to his own business.

It gets kind of complicated, but you catch my drift there.

>But anyway....<flame mode off>

Yeah, what the heck. Scanners and radio are a lot more fun than shooting flames at people wearing asbestos shields. :-)

>Hmmm, like YOU Bill.

Then, Mister John Mackey, you are one stark-raving, imbecilic, nincompoop of a bedpan changer in a looney-tunes ward. As for "engineer".....oh yes, I am and quite recognized as such by many professional societies and organizations.

The thing that sticks in your craw like a dog gagging on chicken bones is that I don't need or desire to spout any "credentials" to the likes of you and Duff. Why should I? Who the hell are YOU two? Two very sad little boys who got their knuckles barked and butts kicked and have no one to wipe their snotty noses..... poor little fellows.

Do you show off your credentials to pissants? Of course not, and that's exactly why I don't bother citing mine to you and Duff. Now anything who matters knows. And that is plenty good enough for me. You and Duff matter about as much as the village idiot flea on a junkyard dog. If I gave you my credentials, would it make you LIKE AND ADMIRE ME more? Whooooooooooey, thanks, but no thanks, I'll pass this time. I don't need any admiration from you and HIM.

Geezus H. Kriste, I sure don't need your admiration.....!!!

As for calling attention to myself.....do you think I do THAT? Ha ha ha ha ha ha.....you're nuttier than a fruitcake, Mackey. YOU and the Duff call plenty of attention to me. Hells bells, I don't need to do it myself, thanks to you two popinjays. You two PRicks are the best PR in the world, and the hilarious thing is that you work for me for FREE. Ha ha ha ha ha ha ha ha ha ha ..... <giggling uncontrollably>

And belittlement? Ha ha ha ha ha......find me ONE, John Mackey, find me ONE fellow who got belittled by me who didn't start it in the first place. Do it, John Mackey......whip it out! Let's belly up to the measuring stick. Talk about lies! Geezus, you lie like a rug and talk like a possum eating road apples....

Keep it up, John Mackey, and I will tell the good people around here the story of how you were born without any eyelids and what the doctors did to make you look halfway natural.

>
>I don't have my BC2500XLT manual handy, so I can't quote all of the IF
>frequencies... But using that as an example, how do I calculate
>possible image frequencies?

Here's the deal. Most mixers accept two input frequencies and put out four freqs. The Inputs are:

1. From a previous stage of the receiver, or incoming RF from the antenna, and

2. The local oscillator or heterodyne signal.

The outputs are:

1. The RF signal
2. The L.O. signal
3. The sum of 1 & 2
4. The difference between 1 and 2

#3 or #4 will be the IF (intermediate frequency) of the next section of the receiver, Theoretically, that IF section will have a bandpass filter or tuned stages so that the undesired 3 of the 4 signals will not be passed.

Single and dual conversion receivers are especially susceptible to image frequency interference because the passband of the receiver is not able to distinguish between two or more of the mixer outputs that can be so close together as to be within the passband of that section of the receiver.

Fer instance, a common 1st IF frequency is 10.7 MHz. That means that an incoming signal of 850.000 MHz will be mixed with an L.O. frequency of 860.700 MHz or 839.300 MHz. Let's suppose the L.O. is 860.700 MHz for this example:

Incoming of 850.000 MHz gets mixed with 860.700 MHz, resulting in outputs as follows:

1. 850.000 MHz
2. 860.700 MHz
3. 1710.700 MHz
4. 10.700 MHz

Cool. So that output section contains a bandpass filter centered at 10.7 MHz and is say 100 KHz wide. That means the first three freqs get rejected because they are out of the passband, see? But all ain't cool. Let's see why.

Suppose another RF signal besides 850.000 MHz was present, say 871.400 MHz.

Ok, 871.400 also mixes with the L.O. of 860.700 MHz to result in the following four outputs:

1. 871.400 MHz
2. 860.700 MHz
3. 1732.100 MHz
4. 10.700 MHz

Yikes! Your receiver is tuned to 850.000 MHz but it can receive 871.400 MHz just as well! That 871.400 is an image frequency! You are tuned to 850.000 so 871.400 should not be detectable, but it is, thanks to the 10.7 MHz of signal #1 being indistinguishable from the 10.7 MHz resultant of signal #2.

Triple conversion and a careful selection of L.O. fequencies renders image frequencies non-existent for all practical purposes. But triple conversion is found only in the better receivers since it costs more, and the way the scanner bands of interest are allocated, image interference isn't really much of a problem for dual conversion scanners except up in the 800 MHz regions.

Image interference IS a problem for continuous coverage receivers, and even in poorly designed triple conversion units where the L.O. frequencies aren't carefully selected by the designer.

Images are related to ALL stages of a receiver, but by careful design, 1st stage images are rejected in the 2nd stage. And 2nd stage images are rejected in the 3rd stage. And 3rd stage images should be designed to fall outside the passband of the crystal, ceramic, or mechanical IF filter that establishes selectivity for the receiver.

Sometimes intermodulation interference is mistaken for image frequency interference. The two are related in some ways, but are very different in cause and effect.

3250. Antenna Grounding

Newsgroup: rec.radio.scanner
Date: 1996-09-01 00:00:00 UTC
From: mikenet@earth.usa.net
Message-ID: <50dht3$eka@earth.usa.net>
Source record: 224598

I have a question concerning the grounding of an antenna.

Currently I have a Rohn free-standing tower with two large TV
antennas on top of it. The tower is grounded as well as the coax
and the rotator cable.

What I'm going to do is use a side-mount to put up a Diamond D-130J
scanner antenna. I will be using Belden 9913 coax or a similar type.

The question is, Do I need to ground the 9913 or will the scanner antenna
be protected because it will be mounted below the TV antennas and because
the tower is grounded?

It is my understanding that if lightning were to hit the tower it would
take a path directly to the ground rod attached to the tower.

BTW, I've found the Belden flexible 9913 coax a little hard to find. I
have seen coax called "CQ Flexi 4XL811A" being advertised as being the same
as Belden flexible 9913. Has anybody used the CQ? Is it OK?

TIA.....MIke

Does anyone have the new whereabouts of the New Jersey State Police Troop "D" (The New Jersey Turnpike)?? They used to reside on several VHF-Hi frequencies (155.190, 155.580, etc) but have since disappeared. I have tried seaching around the 800mhz band (where I believe they have relocated to) but have found nothing other than Troop "C" (trunked State Police for central Jersey) and Troop "E" (Garden State Parkway).

Any help would be appreciated! I am specifically interested in the frequencies transmitted from the New Brunswick office at exit 9 of the Turnpike..

- E

Please e-mail any reply to eric172@aol.com or eplent@injersey.com

Ken,

Someone else posted your mod for free some time ago.

Here it is:

Subject: AR8000 FILTER MOD DETAILS
Date: Tue, 06 Aug 96 19:19:13 GMT
From: wm8p@infinet.com (Bob Mills)
Organization: InfiNet
Newsgroups: rec.radio.scanner

Hello AR8000 owners,

To my knowledge no one has actually posted a filter mod, here is what
I did. This is my approach and I only know it works well on my AR8000.
Your results may vary. Others may have a different solution that
works better or worse.

THE GOOD NEW:
Is it worth the effort. In my opinion YES!
The search mode is vastly improved on the SW bands. Search stops
on the primary frequency and not 1 or 2 times before and after.
Readability of SW stations is vastly improved. In some receiving
instances it reduces adjacent channel interference noticeably.
On AM receive for aviation frequencies a pronounced improvement in
audio quality is noted. You will be able to select WIDE or NARROW
for AM, NFM, USB, LSB.

THE BAD NEWS:
This is a difficult mod to perform. I have been a ham for over 30 years and have extensive homebrew experience. It took all my skill and a magnifying glass to perform this mod without damaging the radio. IF YOU ARE NOT QUALIFIED DO NOT ATTEMPT THIS MOD!
Find a qualified helper.

There is no way to adequately describe the locations on the circuit board to be cut and soldered too. You will have to buy or borrow a service manual.

Study the electrical mods described below and then using an ohm meter and the service manual find the locations to modify on the circuit board.

WHAT IS MODIFIED ELECTRICALLY:
The 4khz filter (F4) circuit is paralleled by a a jumper that is used to bypass the filter for WIDE reception. This selection process is accomplished by switching diodes on each end of the filter and bypass.

Find U2 pin 11 (AM, FM filter bypass) line. Trace this line to a 22K resistor that connects to the switching diodes (near the F4 filter). The voltage from pin 11 is used to bias these diodes into conduction. Cut through the circuit trace at a convenient location just before the 22K resistor.

Find U2 pin 4 (SSB, CW filter inline) line. Trace this line to TWO 22K resistors that connect to the switching diodes (near the F4 filter). The voltage from pin 4 is used to bias these diodes into conduction. Cut through the circuit trace at a convenient location just before the TWO 22K resistor junction.

Unfortunately there is no way for me to put a schematic in for this next part but if you draw it out on paper you should be ok. You are going to mount a small switch on the radio. This must be a DPST switch.

Connect a wire from the WIDE side of the switch to the single 22K point.

Connect a wire from the NARROW side of the switch to the dual 22K resistors point.

Connect TWO 1N914 style switching diodes together to the switch common.
Connect them with the black band facing the switch.
Connect U2 pin 11 to the open end of one diode and U2 pin 4 to the open end of the other.

What you have done is to install a switch to reverse the normal filter selection of F4. The 1N914 diodes serve to prevent turning on the BFO in the AM mode and to prevent grounding when in the WIDE SSB mode.

If you have questions you may email me but if you post a reply all may benefit. I make no guarantees, your results could vary.

You might not have much fun performing this mod but you
will enjoy the results.

Hi everyone.

I was flipping through the latest (well, the best my newsagent can do!) edition of short wave magazine and noticed several good offers on the AR-2700.

But how good really is this receiver? I was wondering if anyone in this group owned the scanner, and if so could they give me a bit of feedback on it's modes, frequency range, sensitivity etc. etc.

Replies would be prefered via direct e-mail, but I do check this group occasionally so choose whichever is easier!

Thanks in advance!

Subject: RE: Van Horn & USSN

BG> Thanks Bill, we have been looking for a copy of your posting.

==========

Good grief! Get off it, Mr. Gehri. This insane threat of a legal battle is a no-win situation for everyone, most notably the Hobby, to which you are purportedly committed to serve.

It is a no-winner for you. Regardless of what a Court and Jury might eventually decide after years of litigation, the stink and aura of

such action could cause USSN and the Hobby far greater damage than any alleged speculation and discussion by your antagonists.

The distractions of depositions and court processes alone, not to mention the subsequent mountains of legal maneuvers, would surely prevent you from doing the best possible service to the Hobby which you purport to serve. Can you fight a needless legal battle and write a good scanner rag at the same time?

The burden of proof of intent to harm rests upon you and such proof will not be easy or economical to establish, especially when there may exist hard evidence to show USSN brought it upon itself.

Clearly the USSN is on "hard times", unable to pay a substantial obligation to its writers. The USSN's subsequent move to take on a greater burden by assimilating the defunct RCMA's outstanding subscriptions is an extremely questionable move in light that its writers STILL go unpaid. It is as if USSN expects its writers to finance the absorption of the RCMA.

The letter from your lawyers does not reflect what THE WRITERS SAY! Are you prepared to deal with their testimony that could support the statements made by Mr. Van Horn? Several of the writers told ME that USSN did not communicate substance; just bits and pieces over a period of several months. If that is true, then your lawyers' case becomes even more weakened.

As I hear it, the latest word from USSN's publisher, Ken Gilbert, is "that USSN has committed to paying the writers sometime in the 4th quarter of this year." A "Robert Smith" (is that YOU, Bob Gehri?) is known to have said to the SCAN-L List that the USSN writers will be paid "by the first of the year..."

Apparently your lawyers don't have it right since their letter states:

> "..... U.S. Scanner Publications has committed itself to paying all
> writers for services rendered when financially possible."

Whooey, but that sure leave the door wide open, Mr. Gehri! Suppose it is never "financially possible" for your writers to be paid?

Then what?

It is no wonder that people are talking now, some of it seemingly unfavorable to you and USSN. What do you expect - glowing accolades for your humanitarian gesture to the RCMA at the expense of your writers? Were they considered "expendable"?

This threat via your lawyers sure makes it appear as if the USSN is looking for some "deep pockets" somewhere. I think you need to understand that there are no deep pockets on the radio scene right now, and there may never be again. Your apparent move for "creative financing" and free advertisement is bound to lose, in my opinion.

Not only will it accelerate USSN's (admitted) negative cash flow, but it will seal and bury this Hobby before its time. Even if you emerged legally victorious, you could inherit a wasteland.

STOP, Bob Gehri! Call your lawyers off! Get yourself and maybe a backer (Ken Gilbert?) onto THIS Usenet forum (rec.radio.scanner) and meet heads up with Mr. Van Horn & Mr. Grove. Resolve your differences HERE, in the open where there can be no mistaking who says what.

You claimed damages were incurred over the Internet. Well, they can be fixed here, too!

It will be vastly more economical to resolve issues HERE than in Court. Everyone has a chance of WINNING here. No one will win in Court, except the lawyers. They do not belong here.

We do not belong there.

This is a place for hobbyists and those who serve the Hobby. The issues are of wide-spread interest and concern around the Hobby, too. We can't attend Court, but we can attend near-real-time discussions HERE.

That's right, Mr. Gehri, I challenge you to waltz your butt onto THIS forum and openly confront Mr. Van Horn with what you think to be defamatory, inaccurate, or unfair. Give him a chance to retract, clarify, explain, confirm, or deny the accusations. It will cost neither of you anything to take that step. Sure, it could get worse, but the step you and your lawyers are taking are guaranteed to make it worse for all concerned. (Those lawyers just love people's wallets!)

Sure, there will be some heat here! Geezus H. Kriste, Mr. Gehri, I have been taking nothing but heat for the last year. So what? I can hack it. Can't you?

If you want, you can pick and choose the heat to be addressed. You can apply heat of your own and see what the other guy does. Or, you and he can ignore the hell out of everyone else and stick to the issues between you. No one's the "Boss Hawg" here.

Let the Hobby Community be your judges. THEIR decision will be in the best interests of the Hobby, that's for sure. A Court will not decide in that light. A Court will decide for YOU or against YOU. Nothing more.

So are you out for yourself? Or the Hobby? If for yourself, then stay in your ivory tower; go to Court; and may the best lawyer win.

If for the Hobby, then keep it simple and low-cost and show up HERE, ready to face your accusers and perhaps do a little accusing yourself.

It doesn't get any better than right HERE, Mr. Gehri. Do it! Muzzle and leash the law dogs and challenge Mr. Van Horn to meet you here. You and he set the rules. Formal - informal; fight, hug, kiss, bite, stab, cuss, fuss, discuss, moan, snivel, or whine.

But resolve matters HERE.

The community will watch.

>One wonders WHY this moderated newsgroup issue is being rammed down
>our throats. Mr. Gary "Rimfire" Hobart likes to think it is because
>of me.

Your description of Tim's efforts (and I have never met Tim, so I'm
not his shill) is written in rather emotive terms.

Tim is working within the rules of the road for usenet and is
observing the proper protocol and ettiquette. Any one can submit an
RFD; usenet has rules to ensure that the proposal is properly debated
and voted upon. The vote ensures that no one can 'force' a proposal on
a group.

Considering that the issue was raised here, and some support was
voiced, his effort was constructive and appropriate. Whether the
proposal is approved or not is for another day, but there is nothing
wrong with what Tim did or how he did it.

>Mr. Payne seems to infer as much, too. Perhaps Messrs Payne and

>intimidation. Some think that makes me "special". It does not. No
>one is subject to intimidation who otherwise doesn't want to be. No
>one has anything FORCED upon them unless they choose it.

Personally I don't consider you more or less 'evil' than the people
you bicker with, I just want it stopped. And I don't care whether you,
or they, have the satisfaction of getting the last word in. Someone
has to walk away and ignore whatever the other guy says next.

>One wonders WHY, then, this push to moderate the newsgroup. It will
>have the effect of eliminating me and other knowledgeable people from
>freely participating with and among you.

Ah, Shakespeare.....:"Death, where is thy sting?" Enough people who
remain to make the conference worthwhile....you're certainly in the
expert category, Bill, but no one is irreplaceable.

> That's why I threw my hat
>into the ring for consideration as Moderator. I already AM a

>moderator of another forum where it's no big deal to the people who

>Duff, etc, who were evicted for the SAME qualities you see in them
>here. <shrug> It is prima facie, self-explanatory why those people
>were evicted. You won't see their monkeyshines in any moderated
>group.

A great many people here also participate or lurk in the scanradio
conference. Their votes will tell one way or the other.

>Moderation of a Usenet newsgroup differs from how a FidoNet forum is
>moderated. First of all, no one can get "kicked off" a newsgroup. It
>doesn't work THAT way. It's actually more effective, thanks to a
>process quite well known as CENSORSHIP in oppressed societies.
>That's right.....all posts go to a "central authority" who reviews the
>article (in his own good time) and then passes it on for public
>posting, if he feels like it. Or, rejects the post if he wants.
>Plain old censorship is the name of that game, good people. Is that
>what you want?

I share your concern about the repressive aspect of moderation.
However, there are a number of really good people in this newsgroup
and I personally would be willing to place the conference in their
hands. The moderator role is a person who works behind the scenes,
without the 13D Boot technique. Moderator positions can be reviewed
and revoted periodically. I like that approach better than an open
flame season and twit filters approach - but I'm just one voter.

>Supposing that IS what you want, then how about the regression of the
>technology? Oh YES! Extra time will be required for the Moderator to
>read and PASS on the articles to be posted to the group. Where right
>now it is possible to post one minute and get a reply in less than an
>hour, a moderated forum will average 24-48 hours for a post to be
>placed on the forum. GONE WILL BE THE EXPEDIENCY AND TIMELINESS OF
>THE GROUP'S COMMUNICATIONS.

I participate in a number of listservs. Delay is not a problem.
Propogation delays on usenet exceed moderation delays. Most of us are
hobbyists who have to squeeze our internet time into our real lives -
family, work, etc. So what we don't read today we'll catch tomorrow.

>Before you decide, do a real cheap experiment for a minute. Use your
>newsgroup reader to call up the server and download the list of
>21,000+ newsgroups.
>I just did. And found exactly 27 moderated newsgroups out of over
>21,000. TWENTY-SEVEN?

I did another count. I counted how many listservs I read, versus how
many unmoderated conferences I read.
My personal count was 50-50. And when I thought about the moderated
ones and asked myself, "Which conferences are harmed by the efforts of

the current moderator?", I could only think of one.

>Vote for a moderated newsgroup, and get censorship for your time and
>trouble. Vote against it, and retain your freedom to pick and choose
>among that which you read and reply.

>Your vote for a moderated newsgroup should be NO!, even if I am a
>candidate for Moderator. Let Mr. Payne and Mr. Hobart go off and
>start their own moderated forum, if they want one.....but not STEAL
>this one from under your noses.

I personally do not feel that anyone is trying to 'steal' this newsgroup by pursuing the moderator idea. We can all vote on the proposal, and if a moderated group fails we'll all end up reading alt.radio.scanner anyways. Again, I question why you feel you have to use personal invective to make your point.

This post probably belongs in the news. hierarcy, but I looked in news. announce and news.groups and didn't find the RFD or any threads about it. Anyways, I've exhausted my 2 cents' worth, so I'll drop it now. Thanks to those of you who read this far.

Regards
Paul

>despite no support for it, so maybe he has something up his sleeve.

I think it is a given that this group will remain unmoderated (per the origional charter). Those that want a moderated group can go through the required steps to create a moderated group (rec.radio.scanner.moderated) if they are up to the challenge. It would be somewhat easier to make an alt.radio.scanner.moderated to see how much interest there is in the group, and to see if anyone is actually up to the hassle of being a moderator. It seems that most of the talk concerns who would be appointed PLO (Permanent Latrine Orderly, older types will remember the movie). The flame war adds clutter to the group, but with current news readers, you just don't have to read or download the article unless you want to (not reading the flames is right up there with not touching wet paint). Diamond antennas will cover the ranges you are looking for. The cost
of each antenna is around $20. Also any HRO has a full line of
antennas for handhelds.

Yes, it's the AR2900, supposedly available SUMMER/FALL 96, but probably not! It will still be 500 channels, but offers LSB, USB, and CW. I received the EDCO catalog, and it has the AR2900 as a blurb after the AR2700 ad. No picture was offered. Its scan rate is supposed to be 50 channels/sec.

The City of Seattle has finally come out with its Citizen Access guide to the 800mhz trunked system. Basically, this is a short description of trrunking, how much the radios cost, where to get them (call the Motorola Rep, provided), a list of talk groups that will be programmed into the radio by the City's radio shop, the cost for the programming, and forms to sign. If you want a copy of this Citizen Access Guide, call Katherine-Schubert-Knapp at 206-386-1234. Address: Department of Administrative Services, 618 Second Ave, Seattle, WA 98104-2214.

Among the interesting things in the Citizen Access Guide:

15 talk groups for the Seattle Fire Department

5 talk groups for Seatte Police (dispatch only; no tactical talk groups)

This year, they must be leaving it up to the discretion of the individual store managers (now THERE would be a first...Radio Shack Corporate in Fort Worth allowing their managers the ability to decide ANYTHING on their own!)

Or are they?

I just returned from my friendly neighborhood Radio Shack store here in Orlando. I bought approximately $6 worth of parts and requested a catalog. The clerk informed me that he did have to "wand" the catalog, but that there would be no charge. He then proceeded to scan the catalog, but then manually changed the price charged to 0.00! Cool!

Now, the $10,000 question: has Tandy Corp FINALLY seen the light with regards to customer complaints about being charged for their catalogs, or was this just a smart soul who had ingeniously figured out a way around a bad corporate policy that aggrivates his customers?

3282. Hillsborough Moved to Trunk

Newsgroup: rec.radio.scanner
Date: 1996-09-01 00:00:00 UTC
From: dpinero@pobox.com
Message-ID: <3229f9e2.122080027@nntp.ix.netcom.com>
Source record: 224669
Cross-posted to: alt.radio.scanner,rec.radio.scanner,alt.law-enforcement

Well the long awaited move to a trunked radio system by the Hillsborough County Sheriff's office (in Florida) has finally been made. Judging by the comments made by the deputies who are using it, it seems many of them aren't happy. I can't understand why so many public-safety agencies continue to sign onto these things when they are universally regarded as faulty and undependable! I have never heard a good thing about a trunked system by anyone who has used one. As a scannerist, I certainly don't appreciate them, but then I don't have to rely on one to save my life!

The move has good and bad points. Of course it is trunked which means we as hobbiests will not be able to follow individual agencies on an exlclusive basis. Those of you who work as part of crime watch programs or in the media may be able to work something out with them. I understand it is possible to purchase the actual radios the police use but I imagine this is quite a process.

But scanning the HCSO is just as pleasurable as ever if you don't mind not being able to follow a particular district. In fact, the system has opened up several "casual chat" frequencies and a phone-patch system which seems common to all trunked systems. It is now possible to hear the lengthy conversations which can occur between deputies and detectives.

By having listened to such a conversation already, I can tell you that the road deputies seem to be under the impression that scanner hobbiests can not listen in to them. I heard one officer tell another "I think they should trash the whole thing...they (scanner owners?) will just find another way around it." It seems we already have! (eyes rolling). Are trunking reps *still* telling public safety agencies that trunking will secure their communications? Hoo-boy...I feel like such a nasty deviant just listening to them.

Anyway, I don't know the manufacturer of the system...I know you're supposed to be able to tell a lot by this but haven't done that kind of research. The characteristics of this system include a series of high-pitched beeps after each transmission. Normally both sides of a conversation crop up on any frequency in the group...but occassionally an entire conversation will occur on one frequency if the dispatcher keys up in time. In Lee County it was standard for a conversation to take place on one frequency as long each party talked in time to retain the current repeater. But now that I hear HCSO's system, I don't know if this is the rule or the exception.

At this time it appears that a handful of agencies are on the system (city engineers for Tampa?), and also the technicians who tend to talk about the work in progress and offer a few clues as to what we can expect in the future.

Let me know if you want the frequency list for this new system, although I got it someplace of the web myself. Try doing a keyword search on FLORIDA and TRUNKED using your favorite engine. If I can re-find them quickly, I will post them to these groups. I had them but have since reformatted my machine and now only have them in my actual scanner. And I don't feel like typing them up when I know there is an electronic version out there somewhere. This is a BIG system...I will tell you that!

Good for you. As a consumer, one of the only ways to make your voice heard is via your spending.

Does anyone else find it curious that USSN was able to...

- Maintain a web site and offer the use of their server to host SCAN-L
- Purchase the mailing list of RCMA
- Hire a lawyer to draft that ridiculous letter

...all the while they couldn't pay their writers? Smells fishy to me!

My plan of attack is threefold...

- Don't purchase anything from USSN
- Don't purchase anything from anyone who advertises with USSN
- Don't purchase anything from anyone who allows USSN to advertise with them

I urge others with similar feelings to consider similar actions in an attempt to voice your opinion.

: Michael....do your scanner have Search, spelled "search"

: If so MIKE....search the 44.00 to 45.00
: 151.00 to 152.00
: 122.00 to 123.00
: 153.00 to 155.00
: 488.00 to 491.00
: 33.00 to 35.00
: and make note which ones apply....

That won't work, LACoFD is in the 470mhz range, they were using Blue 11
repeater 470.5875 as tactical and Blue 12 direct as command 470.4875, but
that was last week, and they're winding down the operation now.

You'd also miss ANF channels which are 171.575 dispatch, 168.600 tactical,
169.175 tactical, 168.200 tactical, 170.000 air-ground tactical, 169.200
Air ops, plus also miss LACoFD air ops which are 118.925, 118.950 and 119.975

There's nothing in the 33-35 or 44-45 range that would apply here.

Most of the CDF tacticals are in the 151 mhz range though, there's
literally 100 of them, so listing them is impossible.

3288. Democratic Convention Operation Center

Newsgroup: rec.radio.scanner
Date: 1996-09-01 00:00:00 UTC
From: albert britton <absl@nwu.edu>
Message-ID: <50d3uj$mb8@news.acns.nwu.edu>
Source record: 224675

I had recently wrapped up some volunteer work in the Joint commcenter for the Democratic National Convention (DNC) held at the United Center in Chicago. There may be other postings about the 800Mhz truncked system contracted by Motorola for use by all the departments. I was not able to get into Motorola's command post where the trunking brains were located so I don't know the full capability. I do know that we were all using the standard MTS2000 radios. In the commcenter there were base stations set up by the Chicago PD utilizing all the Citywide freqs divided into use for demonstrators, traffic, inside and outside security and the Zone 13 (460.450 PD districts 9,12). Fire and EMS ops were handled by a LT and Battalion chief on the Admin channel (154.220) Il State Police did not have a base set up. Capitol Hill PD were operating using protected mode Sabers but did not know the freqs. It was somewhere in the VHF hi-band (164-?). Secret Service had an advance team set up a six position repeater system and three operators in the protected mode. They had a separate Special Agent cross trained as the "commo" (comms officer) who was field programming the Sabers thru two laptops and a Motorola keyloader. Operating freqs were not obtained but there was nothing to hear anyways. They were all very nice guys. It was pretty interesting seeing what goes into the preparation of such a big event and if you get the chance take it in

That is the question. Who cares is the answer. I, for one, avoid these bombastic little missives about Cheek, etc., etc., and all the narrow-minded anarchistic ideas that are thrown about on this group. I just stick to seeking and answering SCANNER AND SCANNING QUESTIONS. You dudes can rant and rave all you want. Just do it somewhere else, huh.

I've sat in the weeds long enough, tolerated just about all the childish, boorish and moronic behaviour I can handle. Moderating this newsgroup subjects us all to the morals, ideas and ego of the the moderator. That's no good. Not having a moderator simplifies the issues, but exposes us all to you morons who flame one another, for whatever reason. That's not good either.

Maybe we should follow the advice of Bob Dole and find our own self-control:) Nah, that won't work. Any respectable ideas short of character assassination, flame-wars, and just plain stupidity?

My two cents worth re: the moderation debate:

This is one of the few groups that has almost no Spam. The substance to noise ratio is typically fairly high. The volume is not such that much would be gained by someone deciding what I should and should not be reading on this group.

It really is trivial to pass over the whining back and forth between some individuals here. I'd prefer to choose when I want to skip it and when I want to see if anything interesting is there.

The moderated groups that currently exists usually come in to being for a couple of reasons. First, groups that are selected for incredible amounts of advertising spamming. Some of these groups saw the spam actually outnumbering the non-spam posts each day.

The second reason are groups that are targets for childish pranksters or abusers whose life is so trivial that they want to go into something like an alcohol abuse support group and see how "clever" they can be.

I don't see this group having any of the problems that require a moderated group. If someone wants to submit a RFD and then set up a new moderated group, hey, it's a free world. I'll stay here and I suspect many others will also. I suspect that most people who are scanner enthusiasts are inclined to wanting someone else to decide which messages are appropriate for them to read or not, and since r.r.s. doesn't fit in the classic abuse or spam category for a moderated group, that's about what a moderator would be doing.

As an aside, this Attack Cheek/Cheek responds posting is a bit amusing. For those who don't like Bill, why not just ignore him if you dislike him so? (I already know the responses....). For myself, I remember corresponding with Bill back in the FIDO days back when no one had internet access, and I remember Bill giving out a lot of advice and mods, including those from his book, with nothing asked in return. I've had Cheek answer some REALLY stupid questions of mine, back when I was a scanner neophyte, with patience and with follow-ups. Yea, he can be abrasive as hell, and I do think he rather enjoys a good round of verbal bar-room brawling, but the guy is extremely knowledgable and I've never seen him refuse to answer a technical question.

Here are a few tips on searching for school, fairs, circus,etc frequencies...

There are a number of "itinerant" frequencies for nationwide, low power use. Some use these frequencies simplex, others use a repeater. First, try these:

151.625 154.570 154.585 154.600 464.500 464.5125 464.5375 464.550 469.500 469.5125 469.5375 469.550

The above are by far the most common frequencies. Don't be surprised to hear McDonalds & Burger King order windows on 154.570 and 154.600.

Next, try these:

457.525 457.5375 457.550 457.5625 457.575 457.5875 457.600
467.750 467.7625 467.775 467.7875 467.800 467.8125 467.825 467.8375 467.850 467.8625 467.875 467.8875 467.900 467.9125 467.925

Low power walkie-talkies may also be licensed in between (12.5 KHz steps) repeater pairs. A repeater operates at 25 Khz intervals starting at 461.000 for business bands i.e. 461.000 461.025 461.05 ,etc. The walkie talkies can operates on 461.0375 (461.025 +.0125), 461.0625 etc up to 469.9875. The repeater inputs are 5 Mhz higher, for example, 466.025 is the input to 461.025 etc.

Airlines primarily use the 460.650 to 460.875 and 465.650 to 465.875 range. In areas not close to a mjor airport, these frequencies may be assigned to businesses, police, fire, and other users on a shared basis. Don't forget to check out these frequencies and their 12.5 Khz splinters as well.

Fire departments are asigned the 460.525 to 460.625 band and 465.525 to 465.625. Police departments share the 465.5125 to 465.5625 frequencies with fire. Local government operations, which can be police, fire, ambulance, highway, housing authority, parking authority, can operate from 453.0125 to 453.9875 Mhz and from 458.0125 to 458.9875 Mhz. Some low power survailance and vehicle repeaters operate in this region as well as from 460.0125 to 460.5625 and 465.0125 to 465.5625.

There are a number of local frequencies, that is for local uses such as hospital security, mall security, school security, amusement parks, etc. They are: 464.325 464.375 464.425 464.475 464.525 464.575 464.675 464.775 464.825 464.875 464.925 464.975. Input frequencies are 5 Mhz higher.

So, try searching 461.000 to 470.000 and see if you pick them up. I think it possible, but unlikely, that school, etc security is using a trunked system.
If they use low band (unlikely) try 35.02 35.04 33.40 33.14. Some schools use frequencies in the 151.655 to 151.985 range.

Some schools (Ossining, NY HS used to) use CB walkie talkies.

On these itinerant frequencies, you will hear store security, highway flagmen, construction workers, some PD's use them for survailances, a whole bunch of good stuff. Hope you find what you're looking for. In the back pages of POLICE CALL (available at Radio Shack) they list usages for all frequencies on your scanner. It goes into alot more detail than I can provide here. As a last resort, ask to see their FCC license. They MUST, by federal law, have one. It will show the frequencies in use.

Business users may be found on 151.955 and 154.515. Some of these may be low power, others are high power. Special Industrial users such as large construction companies may be found on 151.505 158.40 451.800 456.800.

GMRS users are found on 462.5500 462.5625 462.5750 462.5875 462.6000
462.6125 462.6250 462.6375 462.6500 462.6625 462.6750 462.6875 462.7000
462.7125 462.7250. Input frequencies are 5 Mhz higher. Check out the corresponding 12.5 Khz channels at +5 Mhz of the above frequencies.

Some business/itenerant frequencies are identified by a colorled dot or star. The color codes for these radios is listed below:
BLUE DOT 154.570 RED DOT 151.625 GREEN DOT 154.600
PURPLE DOT 151.955 WHITE DOT 462.575 BLACK DOT 462.625
ORANGE DOT 462.675 BROWN DOT 464.500 YELLOW DOT 464.550
J- DOT 467.7625 K- DOT 467.8125 SILVER DOT 467.8500
GOLD STAR 467.8750 RED STAR 467.9000 BLUE STAR 467.9250

Re: Our Client:
U.S. Scanner Publications
Matter:
Defamatory statements posted on Internet by Larry Van Horn and
republished by Scan-L

Gentlemen:

This firm represents U.S. Scanner Publications in connection
with defamatory statements posted by Larry Van Horn on the Grove Net
Internet as "ST Editor" for Satellite Times. On August 18, 1996, Mr. Van
Horn wrote an extensive letter and posted it to "scanner user groups"
regarding the affiliation between USSN and RCMA Scanner Publications and
the relationship between USSN and its writing staff. The letter also

Subject: Status of US Scanner

(Continued from previous message)

Our agreement with RCMA was to honor all the outstanding subscriptions. The cost to us for including The Scanner Journal in U.S. Scanner News will be minimal since we will replace the 12 to 14 page Frequency Forum with The Journal. The cost of the additional mailing will hopefully be offset by the extra renewals we will receive.

A number of entities had expressed interest in RCMA but it was apparent that all they wanted was the mailing list. We were told we were the only ones committed to continuing The RCMA Scanner Journal in its original format.

It is our hope that the RCMA membership would like to see their magazine continued and we feel U.S. Scanner News is the best platform for this purpose. This will expose The Scanner Journal to over 9,000 new readers generating a new influx of members.

Much has been knocked around about this merger. Our intent was to continue The Scanner Journal and in time bring it back as its own magazine. To help preserve the club we asked RCMA writers to continue providing material as before. Perhaps we were not clear enough and I hope you can now see our intentions.

Thank you for continuing to support RCMA.

Now ladies and gentlemen, are the members and subscribers of RCMA and USSN still anxious to subscribe?

Speaking as one of the writers for USSN (Federal Government column), currently not writing until I am paid, once this mess is resolved one way or the other, it will be a very long time before I decide to write again for a magazine.

Subject: Status of US Scanner

(Continued from previous message)

incorrectly described relations among USSN and its subscribers. Enclosed are copies of a portion of the Internet correspondence, including the original posting to which I make reference.

The statements regarding the treatment of subscribers by U.S. Scanner Publications are entirely false. Mr. Van Horn states that prior subscriptions to USSN were not honored when it was acquired by U.S. Scanner Publications. In fact, the opposite is true. All subscriptions to USSN were honored in full, plus two issues were added.

Mr. Van Horn also states that the writers groups for USSN had been fired or, alternatively, were on strike. Again, this is entirely false. When U.S. Scanner Publications recognized it was unable to pay outstanding obligations to its writers, it promptly informed the writers groups that it was unable to pay for services rendered but fully intended to pay all fees owed as soon as possible. Copies of the correspondence relating to the relations between writers for USSN and the RCMA group are enclosed.

Unfortunately, the defamatory statements by Mr. Van Horn were republished by the net commonly known as Scan-L. A republisher of defamatory statements is equally liable with the original party, and we believe the law would support claims against Peter Laws, the individual responsible for posting the defamatory statements on the Scan-L net as well as Arkansas. These legal obligations also extend to the "Grove Net" as well as Mr. Van Horn personally.

The defamatory statements have resulted in a significant number of calls to U.S. Scanner Publications as well as an ever growing number of individuals who are calling to indicate that they will not subscribe until there is some assurance that their subscriptions will be honored and value received in the form of publications.

WE DEMAND that each of the individuals and organizations named above immediately place full-page ads in U.S. Scanner News Magazine, Monitoring Times and Satellite Times specifically retracting the defamatory statements regarding treatment of staff writers, the characterization of subsequent writers as scabs and the false claim that subscriptions were not honored when U.S. Scanner Publications took over U.S. Scanner News Magazine. The ad should also specifically state that no writers were fired and U.S. Scanner Publications has committed itself to paying all writers for services rendered when financially possible.

We also require that each of the "nets" involved publish on
their home page, as well as on all user group forums, specific
statements retracting all of the defamatory statements referenced above
and encouraging any interested party in contacting each of you to
confirm that the original statements published on the Internet were
false and without factual basis.

Although we demand retractions to mitigate the potential damages
to U.S. Scanner Publications, we are not waiving any claims for damages.
We are in the process of determining the scope of damages and will
advise you immediately once we have made an accurate determination of
the amount, if any, of ultimate financial injury.

Do not underestimate the seriousness of my client's demands. The
unilateral action taken by Mr. Van Horn has and will continue to have
adverse financial impact on U.S. Scanner Publications. It is both
outrageous and irresponsible that such information could be distributed
so freely with the knowledge of the potential harm. We fully intend to
proceed with all of our legal remedies but believe it is in your best
interest to publish retractions promptly. Please deliver copies of the
retractions so we may review them first to ensure they do not contain
additional false statements.

Very truly yours,

Roger A. Lenneberg

Enclosure

GRANT & LENNEBERG
==========
RE: U.S. SCANNER NEWS AND THE RCMA SCANNER JOURNAL

There is a lot of misunderstanding as to the future of the RCMA Scanner
Journal. I hope this letter will clear matters up.

We intend to keep the same format, with the exception that there will be
no Regional Editors only State Editors. There will be a separate section
in U.S. Scanner News for The Scanner Journal.

The RCMA membership list will continue to be kept in a separate database
and will not be made available to anyone, no exception. New subscribers
will have the opportunity to indicate if they wish to be RCMA members so
they can have an RCMA membership number or U.S. Scanner News
subscribers. None of the U.S. Scanner News writers will be replaced by
RCMA writers. The two publications are separate and will be treated as
such. Any rumors to the contrary are just that.

Trade:Pro-2005 scanner with 800 & IF Mods for dual-band radio. I need a 2-meter/70 cm mobile Amateur radio with programmable PL for the car. The scanner is in excellant condition and has NEW Blue backlight. This is a 400 channel scanner 30mhz - 1.3 Ghz with triple conversion, Narrow FM, Wide FM and AM. It has been unblocked for cellular and the IF mod will allow you to use another receiver/transceiver for USB, LSB etc. that the other receiver/transceiver has.

Is my AOR-8000 broken, mis-configured or overhyped. I can't seem to be able to receive on 3.975 or 3.995 mhz LSB or 14.210 USB even when a local HAM gave me a call. I am using a 500ft long wire end fed through 50 ohm coax. Using the same antenna with my HT I can bring up some rather distant repeaters with .5 watt. Any insight would be appreciated. I can hear lots of SSB activity but USB or SSB modes do not seem to work.

I'm just going off memory but it seems to me that:

A 5/8 wave antenna has a 3 DB gain. (This is, of course, DBi)
A 1/4 wave antenna is considered unity (0) gain.

For what ever it is worth, a 1/2 wave has 2.4 DB gain.

9913 isn't much different in stiffness & is only slightly larger than
rg-8. The coax to really go for is rg-213 & rg-214 as they are the only
ones that I am aware of that ARE NOT UV SENSISTIVE. The others wear
down from UV sunlight after a year or two and become VERY lossy. This
is typical of rg- 8, 58, 8x, and 9913.

3310. Open Letter to USSN; Bob Gehri; et al

Newsgroup: rec.radio.scanner
Date: 1996-09-01 00:00:00 UTC
From: bcheek@cts.com
Message-ID: <322889ad.12225306@192.188.72.23>
Source record: 224701
Cross-posted to: rec.radio.scanner,alt.radio.scanner

To: Bob Gehri, Robert Smith, Ken Gilbert, US Scanner News
and the entire Hobby Radio Community:

Please refer to Brian Gould's recent post as follows:

> From: Brian Gould <rmedic@frii.com>
> Newsgroups: rec.radio.scanner
> Subject: [Fwd:]
> Date: Thu, 29 Aug 1996 15:15:55 -0600

> Message-ID: <3226088B.6351@frii.com>
> Reply-To: rmedic@frii.com
> NNTP-Posting-Host: ftc-3.ppp.frii.com

which conveys Mr. Bob Gehri speaking through a law firm on behalf of the US Scanner News, and which appears to make or imply a thinly veiled threat of legal action against the following persons and entities:

Mr. Larry Van Horn; Editor, Satellite Times Magazine
University of Arkansas; origin of SCAN-L
Mr. Robert Grove, Publisher; Monitoring Times & Satellite Times
Mr. Peter Laws; Moderator/ListServer SCAN-L

for alleged "Defamatory statements posted on Internet by Larry Van Horn and republished by Scan-L".

Though it seems to have gone nowhere, you also made a thinly veneered threat against me, as follows:

==========

From: Bob Gheri[SMTP:ussn@pacifier.com]
Sent: Friday, August 23, 1996 7:38 AM
To: Bill Cheek
Subject: RE: Van Horn & USSN

BG> Thanks Bill, we have been looking for a copy of your posting.

==========

Good grief! Get off it, Mr. Gehri. This insane threat of a legal battle is a no-win situation for everyone, most notably the Hobby, to which you are purportedly committed to serve.

It is a no-winner for you. Regardless of what a Court and Jury might eventually decide after years of litigation, the stink and aura of such action could cause USSN and the Hobby far greater damage than any alleged speculation and discussion by your antagonists.

The distractions of depositions and court processes alone, not to mention the subsequent mountains of legal maneuvers, would surely prevent you from doing the best possible service to the Hobby which you purport to serve. Can you fight a needless legal battle and write a good scanner rag at the same time?

The burden of proof of intent to harm rests upon you and such proof will not be easy or economical to establish, especially when there may exist hard evidence to show USSN brought it upon itself.

Clearly the USSN is on "hard times", unable to pay a substantial obligation to its writers. The USSN's subsequent move to take on a greater burden by assimilating the defunct RCMA's outstanding subscriptions is an extremely questionable move in light that its writers STILL go unpaid. It is as if USSN expects its writers to finance the absorption of the RCMA.

The letter from your lawyers does not reflect what THE WRITERS SAY! Are you prepared to deal with their testimony that could support the statements made by Mr. Van Horn? Several of the writers told ME that USSN did not communicate substance; just bits and pieces over a period of several months. If that is true, then your lawyers' case becomes even more weakened.

As I hear it, the latest word from USSN's publisher, Ken Gilbert, is "that USSN has committed to paying the writers sometime in the 4th quarter of this year." A "Robert Smith" (is that YOU, Bob Gehri?) is known to have said to the SCAN-L List that the USSN writers will be paid "by the first of the year..."

Apparently your lawyers don't have it right since their letter states:

> "..... U.S. Scanner Publications has committed itself to paying all
> writers for services rendered when financially possible."

Whooey, but that sure leave the door wide open, Mr. Gehri! Suppose it is never "financially possible" for your writers to be paid?

Then what?

It is no wonder that people are talking now, some of it seemingly unfavorable to you and USSN. What do you expect - glowing accolades for your humanitarian gesture to the RCMA at the expense of your writers? Were they considered "expendable"?

This threat via your lawyers sure makes it appear as if the USSN is looking for some "deep pockets" somewhere. I think you need to understand that there are no deep pockets on the radio scene right now, and there may never be again. Your apparent move for "creative financing" and free advertisement is bound to lose, in my opinion.

Not only will it accelerate USSN's (admitted) negative cash flow, but it will seal and bury this Hobby before its time. Even if you emerged legally victorious, you could inherit a wasteland.

STOP, Bob Gehri! Call your lawyers off! Get yourself and maybe a backer (Ken Gilbert?) onto THIS Usenet forum (rec.radio.scanner) and meet heads up with Mr. Van Horn & Mr. Grove. Resolve your differences HERE, in the open where there can be no mistaking who says what.

You claimed damages were incurred over the Internet. Well, they can be fixed here, too!

It will be vastly more economical to resolve issues HERE than in Court. Everyone has a chance of WINNING here. No one will win in Court, except the lawyers. They do not belong here.

We do not belong there.

This is a place for hobbyists and those who serve the Hobby. The issues are of wide-spread interest and concern around the Hobby, too. We can't attend Court, but we can attend near-real-time discussions HERE.

That's right, Mr. Gehri, I challenge you to waltz your butt onto THIS forum and openly confront Mr. Van Horn with what you think to be defamatory, inaccurate, or unfair. Give him a chance to retract, clarify, explain, confirm, or deny the accusations. It will cost neither of you anything to take that step. Sure, it could get worse, but the step you and your lawyers are taking are guaranteed to make it worse for all concerned. (Those lawyers just love people's wallets!)

Sure, there will be some heat here! Geezus H. Kriste, Mr. Gehri, I have been taking nothing but heat for the last year. So what? I can hack it. Can't you?

If you want, you can pick and choose the heat to be addressed. You can apply heat of your own and see what the other guy does. Or, you and he can ignore the hell out of everyone else and stick to the issues between you. No one's the "Boss Hawg" here.

Let the Hobby Community be your judges. THEIR decision will be in the best interests of the Hobby, that's for sure. A Court will not decide in that light. A Court will decide for YOU or against YOU. Nothing more.

So are you out for yourself? Or the Hobby? If for yourself, then stay in your ivory tower; go to Court; and may the best lawyer win.

If for the Hobby, then keep it simple and low-cost and show up HERE, ready to face your accusers and perhaps do a little accusing yourself.

It doesn't get any better than right HERE, Mr. Gehri. Do it! Muzzle and leash the law dogs and challenge Mr. Van Horn to meet you here. You and he set the rules. Formal - informal; fight, hug, kiss, bite, stab, cuss, fuss, discuss, moan, snivel, or whine.

But resolve matters HERE.

The community will watch.

Bill Cheek
Scannist Extraordinaire

3317. PROBE Software / 2035 - OPTO535 Concerns - HELP!

Newsgroup: rec.radio.scanner
Date: 1996-09-01 00:00:00 UTC
From: dconti@carroll.com
Message-ID: <Dx16Ft.4BG@news2.new-york.net>
Source record: 224708
Cross-posted to: alt.radio.scanner,rec.radio.scanner

I have been using the latest version of PROBE software with my Radio Shack Pro-2035 - OPTO 535 setup with much success....

HOWEVER, I understande that there is a code available for the PROBE software that would unlock the cellular portion of the 800 Mhz band.

Being a law- abiding person, and also entering many numbers into the program dailty, I'm concerned that I might accidently enter this code, and therefore break the law.

SO, I would appreciate it if somone could E-Mail me this code, so I will be sure to make note of it, and stay clear of it in my endeavors.

I ask for E-Mail as I would not like some unscrupulous party to see it and break the law.

Any and all help offered in this matter will be appreciated, and my thanks in advance.....!

I write a newsletter which is read by 10,000 professional engineers throughout the US. I do this as a volunteer for a non-profit organization, yet the work involved for one person to publish a sixteen page journal or even one good article in a quarterly period is a tremendous amount of work. I am also in private practice and rely on payments for my work to subsidize my privilege to eat and maintain a roof over my head.
As Mr. Cheek so aptly stated in his post " It is as if USSN expects its writers to
finance the absorption of the RCMA." Very Apt! This is the same as a client who once told me that he would be late with his payment to me inasmuch as it did not leave him enough available funds for his upcoming three week vacation and that he would take care of what he owed my upon his return or soon thereafter.
Imagine the gall to admittedly owe for work already completed and to use the funds for another investment rather than help the writer meet their obligations!!!

This is enough for me. I don't have a subscription to USSN, but I have purchased it each and every month for the last two years. But no more!. Not because of the remarks made on the Newsgroup, but by the admissions made by Mr. Gehri in his legal letter to the forum.
This is akin to the problems that this country faces when the worker must suffer to allow the corporations to gain greater problems. Mr. Gehri should handle one problem at a time.

Can anyone else suggest a new Scanner Mag - USSN has seen better days on my shelves.

A former reader!

Ocean City Police and Fire use a trunked system.

They're using the following frequencies:

851.2875
852.4375
853.9625
855.4625
855.2375
856.7375
857.7375
858.7375
859.7375
860.7375

I know this response is a bit late but I just got the 1997 Radio Shack
catalog and on page 42 is the PRO-2046. The description is as follows:

"New Mobile 100-channel scanner with 800 Mhz and VHF-air band
PRO-2046. Great for travel-just touch buttons to explore preset VHF
police, weather, DOT, highway, and 800Mhz police/fire frequencies.
Also provides band search in 12 preset frequency ranges and
HyperSearch direct search-up to 300 steps per minute. During search,
data skip and 20 programmable search skip frequencies help prevent
lockups on undesired signals. Mounts under dash with included bracket
or in the "DIN-E" stereo opening in many vehicles(some dash adaptation
may be required). (TSP) 20-149.....229.99

Frequency Coverage: 29-54, 108,174, 406-512, 806-823.9375,
851-868.9375, 896.1125-956Mhz. Power: 12VDC neg. gnd. or AC adapter
(not included) Jacks: external speaker, antenna(BNC), power. Size 1
15/16x7 1/16x7 3/8"."

Tim,
Why not let everyone be their own moderator. By that I mean that each
of us can set up our own twit filter list and exclude whomever we like
(or don't like as the case may be).

I fully agree that some moderator is needed here, the crap is getting
rather deep. But I think a personal electronic one is in order rather
than a global "wet ware" version.

After all it's the actions of a certain wetware moderator on a to be
unnamed BBS predecessor of the Usenet news groups, that have all these
folks panties in a wad and the heated exchange of stupid messages.

How can we hope to agree on an appropriate moderator? Besides, the
benign dictator paradigm scares the hell outta me.

Isn't it interesting how aggresive a certain person got when they
thought that they were being discounted for the proposed position of
moderator !? It's those (and I quote) "size 13EE boots" that you'll
get up your 'patooty' if you don't speak the right FIDO 'its my way or
the highway' language...
The attitude sort of ruins the mood.

That basically of sums it up when you get down to the question of "how
did this mess get started anyway ?"

Just the type of person we need to be "moderating" a newsgroup with an
impartial attitude (NOT !!!).

http://www.rdrop.com/users/billmc

FCC License Data Sources
Bill McFadden
bill.mcfadden@tek.com

Changes preceeded by "|". Please e-mail corrections and additions to me.

INTRODUCTION

This is a list of FCC license data sources available to scanner hobbyists. The FCC master contains a wealth of data about every non-government license in the United States (over three million records). Most of the sources listed contain a subset of this data, although a few contain all or nearly all of it. Government licenses are not administered by the FCC, and the data is not available to the public.

Prices are rounded to the nearest dollar and include shipping, if known.

C.E.T.

CET sells records of all stations inside a 30-mile radius for $80. (Major cities cost extra.) A 70-mile search costs $178. The data is provided on floppy disks and is available in ASCII columnar and comma-delimited formats.

CET does not provide data for licenses that do not contain specific geographic coordinates (i.e., mobile-only systems) or specific operating frequencies (e.g., amateur radio).

To do the search, CET requires the latitude and longitude of the center of the 30-mile radius. I calculated mine from a USGS topographic map I obtained at a local nautical supply store. Alternatively, you can obtain the coordinates for your town from the University of Michigan's geographic name server. Run "telnet 141.212.99.9 3000" and enter your zip code. For my area, the server returned the coordinates of the main post office.

CET can be reached at 800-445-0297.

GROVE

Grove sells FCC data on CD-ROM and floppy. The CD-ROM covers the entire US and is available with or without mapping support. The mapping version brings up a map with the requested station plotted on it. The regular version is $104, and the mapping version is $174.

Floppies are available by state for $44 per state (add $10 for CA, FL, TX). The disk comes with a database search program. Grove Enterprises can be reached at 800-438-8155 (voice) or http://www.grove.net/ (WWW).

MICROFICHE

The Bearcat Radio Club sells the FCC master by state for $15. Bearcat Radio Club can be reached at P.O. Box 291918, Kettering OH, 45429.

PERCON

PerCon sells FCC data on CD-ROM. The Spectrum CD covers the entire US and comes with a simple database search program. Regional CDs cover subsets of the US but come with a more powerful database manager and provide more detail about each license. Also available is a Ham callsign and repeater database CD.

| Spectrum costs $37, and the Ham and Repeater Database is $22. Regional CDs are $137 for the first CD, $102 each additional CD ($560 for the entire 6 CD set). Data is updated twice a year. PerCon can be reached at 716-386-6015 (voice), 716-386-6013 (fax), support@perconcorp.com (email), or http://www.perconcorp.com (WWW). The Spectrum database can be searched free of charge via Percon's WWW page.

POLICE CALL

This is probably the most cost-effective source of public service license information. The detail is limited, but the information that is there is often more useful than the FCC master. For example, an entry in Police Call that reads, "Portland Police, Net 3, North Precinct," reads, "Portland, City of" in the master.

Police call is available in 9 volumes covering different regions of the US. It can be purchased at Radio Shack stores for $10 per volume.

RADIOMAP SERVICE

Developed by long-time Usenet contributor Bob Parnass, this service provides a custom report of frequencies, callsigns, and licensee names for a specified area in any of the 50 states. Coverage areas of 4 to 256 square miles will be chosen by Bob depending on transmitter site density. The report includes a color plot with transmitter sites marked.

To create the report, Bob requires the latitude and longitude (or nearest street intersection) of the center location. Reports are $26 each. Write to Bob Parnass at 2350 Douglas Rd, Oswego, IL, 60543, or call him at 708-554-3839 between 6-10 PM central time.

SCANWARE ASSOCIATES

ScanWare Associates sells a PC-based database program called the FCC Frequency Retrieval System V2.x. It comes with FCC data for one state, covering all services and all frequencies. Data is updated approximately every six months.

Cost is $35 for the first state and $20 for each additional state. Updates cost $30 per state. (Add $5 for CA, FL, TX, NY.) Quantity discounts available. Fully working shareware copy (FCC215.ZIP) downloadable from their BBS at 360-871-4228 (below 9600) or 360-871-4591 (9600-28.8k). ScanWare Associates can be reached at 360-698-1383 (voice), 360-698-8207 (fax), scanware@sincom.com (e-mail), and http://cutter.sincom.com/~scanware/index.html (WWW).

US SCANNER PUBLICATIONS

Similar in style to Police Call, this series of directories covers ALL radio services between 30 MHz and 2 GHz. Each volume covers one state and costs between $14 and $29, depending on the state. The volume for California is 820 pages. Contact US Scanner publications at 800-890-6999 (voice) or 503-233-5176 (fax).

APPENDIX

Here is table of data fields in the FCC master. Fields provided by various products are indicated by "#" or the field length, if known.

>ten times worse than it *was*.

Why do you think that? Moderating is a mechanical job. You just enforce the rules. You approve on-topic posts and reject off-topic ones. What's so tough about that?

> I don't think it would do any good.

Well, yeah, I think Payne's move to get this group moderated isn't very bright or well conceived.

> ISP don't care what is going on as long as they are getting their money!
> We have seen that already. So what good will it do?

You don't understand. Moderating a newsgroup differs a little from moderating a FidoNet forum. Here, it's just plain censorship, where all posts go through a moderator FIRST before being put on the group. ISP's have nothing to do with it. The "*.moderated" tag gets added to the newsgroup name which then forces all posts to a designated moderator for censorship. So if I were Moderator of this group, I'd be as decisive and stuck to the rules as anyone could be. If John Mackey and Hugh Duff wrote scanner articles, I'd pass 'em. If they tried to slam-dunk me (or anyone else), I'd take 'em down and pee on 'em and make 'em smell like a man. <shrug> Wouldn't you?

If people don't want censorship, then just say NO! on the vote. And we'll find ways to deal with problems.

> I for one feel that if
> we *all* grow up and act responsible we can get back to normal. I am
> sorry for the flames I caused here and will try my best to keep my
> opinions to myself.

That is contrary to the spirit of a public forum. We should not keep our opinions to ourselves. We should voice them. But about issues; not about people. As far as I can tell, you NEVER once tried to discuss any issues with me. Or voice any opinions. You went on the attack from the git-go over nothing that had anything to do with you and me.

Rethink THAT, if you will. But do not keep your technical opinions to yourself.

>Uhmmmm!
>Have I read this wrong, or did you read it wrong. I thaught he
>did want to know, and he was asking.

No, that's Hugh Duff, a poor, misguided, unfortunate bucktoothed fellow who doesn't like me very well. I evicted his sorry ass from another forum about a year ago for bad behavior and he's been on a "mission" ever since to rid the world of me.

About 6-7 years ago, I 'fessed up in one of my books that I didn't know the purpose of the 30v DC-DC converter in the PRO-2004/5/6 scanner series. I hadn't bothered to study it since it drew almost no attention unless you stumbled onto it by accident.

This 30v DC-DC converter just doesn't figure in to any hack attacks or even a half-serious engineering analysis of the scanners. But Mr. Duff wishes to use what I admitted years ago, as a propaganda tool in his war against me now. He wants to establish superiority over me and "show me up". The poor wretch is forced to dig into the distant past.

> My Pro 2006 doesnt have a 30Volt Dc.

Oh yes it does. Take a look at the circuit of T-9 and Pin 3 of CN-2. It's a 30v power supply for a FET (Q317) in the scanner's PLL circuit. This special signal amplifier has to be extremely clean and noise-free. The JFET device and 30-volts are how these specs are established. It remains an unobtrusive, uninteresting circuit for most people most of the time. It works fine. It is not subject to any special failure modes. There are no "mods" associated with it. This circuit is of little interest to the techno-scannist.

6 or 7 years ago, I was like you....not really aware of it.

Andy Moss and now Hugh Duff tried to make a big deal out of my ignorance of it years ago. It's propaganda and bullshit; nothing more. There was a time when I didn't know Ohm's Law, either. Moss and Duff were born knowing about that 30v DC-DC converter, though. :-))

Trouble is, they STILL don't know shit from Shinola.

3340. Open Letter About Moderating This Newsgroup

Newsgroup: rec.radio.scanner
Date: 1996-09-01 00:00:00 UTC
From: bcheek@cts.com
Message-ID: <32293a7d.57495603@192.188.72.23>
Source record: 224731

To all:

Mr. Tim Payne wants to force moderated status on this newsgroup. He talks as if it is a preordained conclusion. Supposedly there is to be a vote on the matter. Once wonders if such a vote can be rigged and faked? Admittedly, I don't know all there is to know about creating or changing the status of a newsgroup. But one wonders.....

One wonders WHY this moderated newsgroup issue is being rammed down our throats. Mr. Gary "Rimfire" Hobart likes to think it is because of me.

Mr. Payne seems to infer as much, too. Perhaps Messrs Payne and Hobart feel that I am evil personified. Clearly a few others think along those lines. Why? Maybe because I am not subject to their intimidation. Some think that makes me "special". It does not. No one is subject to intimidation who otherwise doesn't want to be. No one has anything FORCED upon them unless they choose it.

One wonders WHY, then, this push to moderate the newsgroup. It will have the effect of eliminating me and other knowledgeable people from freely participating with and among you. That's why I threw my hat into the ring for consideration as Moderator. I already AM a moderator of another forum where it's no big deal to the people who ARE there. The only people to whom it is a big deal are those few who are not there any longer; people like Andy Moss, John Mackey, Hugh Duff, etc, who were evicted for the SAME qualities you see in them here. <shrug> It is prima facie, self-explanatory why those people were evicted. You won't see their monkeyshines in any moderated group.

Moderation of a Usenet newsgroup differs from how a FidoNet forum is moderated. First of all, no one can get "kicked off" a newsgroup. It doesn't work THAT way. It's actually more effective, thanks to a process quite well known as CENSORSHIP in oppressed societies.

That's right.....all posts go to a "central authority" who reviews the article (in his own good time) and then passes it on for public posting, if he feels like it. Or, rejects the post if he wants. Plain old censorship is the name of that game, good people. Is that what you want?

Supposing that IS what you want, then how about the regression of the technology? Oh YES! Extra time will be required for the Moderator to read and PASS on the articles to be posted to the group. Where right now it is possible to post one minute and get a reply in less than an

hour, a moderated forum will average 24-48 hours for a post to be placed on the forum. GONE WILL BE THE EXPEDIENCY AND TIMELINESS OF THE GROUP'S COMMUNICATIONS.

Before you decide, do a real cheap experiment for a minute. Use your newsgroup reader to call up the server and download the list of 21,000+ newsgroups. Yes, it will take a few minutes, but the results will be worth it. Once you have the list, use the newsreader's FIND feature and search for the keyword, "moderated".

I just did. And found exactly 27 moderated newsgroups out of over 21,000. TWENTY-SEVEN? Whoooooaaaaa, hoss! Something is wrong with that picture. If moderated newsgroups are all that valuable, why just 27? And here are the moderated groups that I found:

alt.2600.moderated
alt.atheism.moderated
alt.conspiracy.jfk.moderated
alt.dads-rights.unmoderated
alt.journalism.moderated
alt.magick.moderated
alt.meditation.moderated
alt.music.pat-metheny.moderated
alt.sex.stories.moderated
alt.skinheads.moderated
alt.support.non-smokers.moderated
comp.lang.c.moderated
comp.lang.c++.moderated
linux.test.moderated
misc.entrepreneurs.moderated
misc.health.injuries.rsi.moderated
misc.legal.moderated
misc.taxes.moderated
misc.test.moderated
moderated
rec.arts.sf.tv.babylon5.moderated
rec.photo.moderated
sci.archaeology.moderated
sci.military.moderated
soc.culture.kuwait.moderated
soc.culture.russian.moderated
soc.history.moderated

Draw your own conclusions. Do your own search. The newsgroup list I searched was several weeks old. The number of 27 could differ by a couple either way, I suppose. But so what? What difference would it make if the number of moderated groups were 10 or 50? My point is succinctly pregnant: in order for a moderated newsgroup to be valuable, it must either be an extremely far-out, weird, flaky subject like the "skinheads" (to prevent kibitzing), or extremely serious and focused like most of the rest as shown above.

FWIW, I don't see REC.RADIO.SCANNER falling in either extreme.

Vote for a moderated newsgroup, and get censorship for your time and trouble. Vote against it, and retain your freedom to pick and choose among that which you read and reply.

Your vote for a moderated newsgroup should be NO!, even if I am a candidate for Moderator. Let Mr. Payne and Mr. Hobart go off and start their own moderated forum, if they want one.....but not STEAL this one from under your noses.

Bill Cheek
Scannist Extraordinaire
(Voicing his own damn opinions)

PS: Mr. Rimfire Hobart doesn't like my "Scannist Extraordinaire" signature. Geezus H. Kriste, aren't we ALL "scannists extraordinaire" ? Perhaps Rimfire is an exception........

>So this will be a moderated group, without a vote of all those who
>participate, with a moderator selected from a restricted list of
>cantidates? Sounds like Washington, DC to me.

David, I don't think it can be taken to a moderated status without a legitimate vote, but whether or not such a vote can be faked, I don't know. Mr. Tim Payne appears confident that it will go moderated, despite no support for it, so maybe he has something up his sleeve.

Just between you and me and the doorpost.....taking this group to a moderated forum will be a very bad thing.....no matter WHO is the moderator. For one thing, we'll lose near-real-time capacity. It might be DAYS before a post on one side of the globe reaches another point on the planet.

Talk about regressive genes, minds, and tendencies.....this notion is plumb dumb. If Mr. Payne wants a moderated forum, I don't see why he doesn't just start one.

Maybe he is afraid if he gives a party, no one will come.....????

IMHO,

Bill Cheek

Impressive! Absolutely, utterly, unparalleled! The most impressive radio-related Web Site I have ever seen! Words are not sufficient to convey the impact and pleasure of visiting your site.

The background MIDI tunes are perfect, too. In fact, I went into Internet cache after the site visit and pulled out the AGNSTWND.MID file for routine playing from my desktop. That tune got into my blood with the first few notes! So much so that I gotta ask ya for the full name of it, if you happen to know. Enrapturing!

Darn nice job on the site, guys! Well worth the visit!!! You outdid yourselves, hands down. There's no place else to go. It's time to retire and go to the great Web Site in the Sky. Your earthly work is done.

Hi Dave,

Think I can answer this one....(just)

> I have heard Javiation does not sell Yupis any longer.
> Any body know about this?

In one word: Rubbish

MVT-7100's are available.
MVT-7200's are available again.
MVT-7000's are still available.
VT-225's are still available (Civil and Mil airbands only).
VT-125's are just about all gone afaik.

As of January 1996 all scanners sold within European Community (EC) member countries have to be CE approved. This is rather like FCC approval (although no restrictions apply to frequency coverage). To obtain CE approval which is very much to do with EMC/RFI some sets have had to have additonal internal screening around components on the RF boards.

Sets such as the MVT-7100 and AR8000 were unavailable for sale here within the UK and Europe for some time as they initially failed CE approval. The AR8000 does now carry the little "CE" badge, externally just the same but internally the RF board has gone through a number of changes to that fitted in an AR8000 six months ago, the inside of the case is also sprayed.
The MVT-7100 also has CE approval.

Honestly and open minded ? Very difficult to believe.

>If John Mackey and Hugh Duff wrote scanner articles, I'd pass 'em.

I've written a some that quite a few people thought were
interesting...Are you interested in reposting some to FIDO or using
them elsewhere ?

>If they tried to slam-dunk me (or anyone else), I'd take 'em down and pee
>on 'em and make 'em smell like a man. <shrug> Wouldn't you?
/\
(More indicators of how childish this person can be.)

And if a democratic discussion related to the NG (or FIDO echo) was to
initiate just like this very topic, it would be squashed and the
involved parties would be evicted. (Did someone say "Dictator"?)
ie..."What are the repercussions of Conflict of Interest when a
certain individual whos business it is to profit from the users of a
BBS echo moderates the same ?" which seemed valid and on-topic
enough to me but resulted in instant expulsion.

You USED TO be able to TALK ABOUT such issues before Cheek took the
helm on the FIDO Scanradio echo. Now, if the message doesn't have the
words "scanner". "Mod Books", "CE-232", "Mr.Cheek, you're great !"
or the like, it is deemed to be off topic and for those that don't see

eye to eye with Mr.Cheek, (disagreeing doesn't instantly make you a rebel) they will be the losers...ie..A "size #13EE Boot" across the patooty !

It is noteable how Mr.Cheek appears to be having great trouble dealing with the fact that SOMEONE ELSE is taking the helm of this ship and ordering up the administration.

I WILL agree (if you can believe it) with Mr.Cheek in saying that moderating this NG would do it more harm than good and be extremely difficult to maintain due to the nature of the newsgroup network. Not so I (or others) can spout off about Cheek, but simply to uphold the integrity of freedom of speech on issues even just related to scanning.

Discussion of this issue is healthy and justified but lets poop or get off the pot and get on with things.

I have one and it compares favorably to the PRO2006 that I used to own as far as its performance goes. I installed the OS535 and have a Scantenna antenna attached.

What I do like in particular (aside from the computer control capability which is what I consider to be the significant advantage over the BC9000) is the rotary tuner , 100 monitor memories and auto store functions. Anything that makes it easier for me to capture, store and manipulate frequency banks is a big plus.

Downconverter Devices:

i recieved this info on this device and would like to install one on my bearcat 350A for recieving 800-900MHz signals. does anyone have and practical experience with them?????

Please respond...

Begin here.....
Ramsey Electronics makes a device known as a "Scanner Converter Kit" or what is referred to in electronics circles as a Downconverter. The device converts the frequency that you want to listen to into a frequency that your scanner can receive. The SCN-1 alows you to listen to frequencies that are downconverted by 400mhz. That means that the 800-950mhz band can be received on most programable scanners that receive 400-550mhz. It comes in kit form ($50) or fully assembled and tested ($90).

Weather Frequencies in the Greater Baltimore area are as follows:

162.4 Baltimore, broadcasted from Pikesville, MD. (originates out of Sterling, VA.)

162.55 Washington; originates out of Sterling

162.55 State College, PA. I can access this if I point my scanner antenna towards the north, especially at night.

Otherwise, if you are from the Balto. area, the SHA has zone fcsts on a low band frequency.

The BC300 is one of the best scanners ever made, in my opinion. It may, however be in need of re-alignment. If you have a good radio shop in your area, see if they can tune it up for you. It should measure about .2 uv for 12 db SINAD on low and hi bands, a bit less on uhf. I have one I bought used about a year ago, and it did need a bit of tweaking. Once I tuned it up, though, it puts my PRO-2035 to shame. Good luck.

: Why moderate at all? Just say no.
: The alternative is CENSORSHIP.....not moderating.

Have to agree with Bill on this one!

If folks want to have a moderated group I'd suggest that they set up a Scanner-Listserve@somewhere.com. Then they could mail moderated posts to subscribers from the two scanner newsgroups and could cull the duplicates. IT would be a quick solution their problem of high S/N postings that they consider off-topic or from a person that they deem offensive.

Weekly postings inviting subscribers could be posted in rec.radio.scanner and alt.radio.scanner. The question of moderation would be moot because those who wished to participate in a moderated list could while those of us who wish to be responsible for our own access to news, information, or flames would be able to continue in the unmoderated forum.

It is up to you what you will read or not. When people begin to think that THEY need to determine what other people read, we are all subject to their preferences and beliefs. These are just stop signs on the "information superhighway". If you want to read it, read it. If you don't, then don't. No one who posts articles should have to have them delayed and evaluated by someone who would inevitably misuse his or her position. No moderation please!

>the tower is grounded?

Let's put it this way.....20-yrs ago I put up a 100-ft tower with all sorts of antennas on it. Several years later, I took it down and found several of the Belden 8214 coax runs would not budge. Following the run up the tower, I found where the shields of the coax were "welded" to the tower leg at many spots along its length.

Obviously, it had been hit by lightning a time or two and the pulses travelling down the shields arced through the outer insulation to the tower leg, thereby bonding the shield to the tower. Fortunately, the coax was not otherwise damaged, and my station never suffered any harm. I always was real hot and heavy on grounding, anyway.

Shortly thereafter, I learned that it is good egineering practice to artificially bond coax shields to the tower at about 10-ft intervals down the tower. Commercial kits are available for this purpose, but I always made my own thereafter, except for industrial sites, of course.

>It is my understanding that if lightning were to hit the tower it would
>take a path directly to the ground rod attached to the tower.

It will take a number of paths. Even though the tower is well grounded, and even though the coax may be grounded to the tower via the antenna at the top and to earth at the station entry point, the shield is not necessarily at the same potential of the tower along its length. Hence, a difference in potential of some magnitude develops and arc-over can occur when lightning hits. And it will, just because the resistance, inductance, and distributed capacitance of the tower legs and the coax shields will be different. So voltages developed across them will differ. A 5kV difference in potential will arc through most coax outer insulation.

>BTW, I've found the Belden flexible 9913 coax a little hard to find. I
>have seen coax called "CQ Flexi 4XL811A" being advertised as being the same
>as Belden flexible 9913. Has anybody used the CQ? Is it OK?

I don't know anything about that. But since 9913 is more or less a
reference standard of quality, you should be cautious with all
pretenders and claimants of "equality"......like you're doing here.

Rgds,

Bill

I can't arrange it. I've not been hired to arrange it. But I sure
can CALL for it as an option or alternative to a long, stinky lawsuit
that serves only to take BOTH parties' minds off the objective of
publishing scanner news and information for the Hobby.

Moderating? How? I have no authority. One side or the other can
laugh at me; call me names; and tell me to stick it. What can I do
about it? Nothing. Doing a little potshooting, are you?

My nose certainly does *belong* in this issue. First, I am well
acquainted with some of the USSN's writers. I am a writer, too. I am
not keen on a precedent being established where obligations to writers
come last on the list.....especially by force.

I can't speak for Mr. Van Horn. I don't know his position, or even if
he knows of this newsgroup. But I did send HIM a copy of the article
just as I sent one to Bob Gehri. They're both free-born men. They
can look at the ideas I presented and adopt or reject them as they
please.

I do know that USSN elected to hire an expensive attorney, thereby
making it all the more difficult to pay their writers. Before that
situation gets out of hand, I would like for the writers to get paid
their due and for the stink of a pending lawsuit to be eliminated.

If YOU have better ideas on how this can be done, why don't you take
the time and trouble to compose them instead of resuming your old
tricks and silly personal innuendo at me.

> Still sore about all those bad reviews in USSN?

All? No. But I would like to see it addressed how USSN could, in good conscience, let an anonymous writer (Andy Moss?) do a smear job in their supposedly honorable pages. That question has never been addressed, but it pales in importance and goes far down on the list of things that need to be addressed now.

In my opinion, I think USSN has done a number of odd, questionable, flaky, hokey, illegal, and/or immoral acts down through their history. So, my sympathies for them are certainly NOT evoked. But before I'd see them go down the tubes, I'd prefer they resolved their problems in the best interests of the Hobby and get on with the business of publishing scanner news and information.

I'll live with USSN not liking me very much, just as I live quite happily with you, Mackey, Hobart, and Duff not liking me too much.

I'll manage. But the USSN writers are not getting their due, and the Hobby is in jeopardy of taking a porking. Please try to see the REAL issues and avoid resuming your personal attacks. You will note that I have left you out of negative issues of recent times. No?

The sooner everyone realizes there IS NO SOLUTION, the better.

America is losing its freedoms at an alarmingly increasing rate
because everyone believes in Freedom and Liberty ONLY for himself, and
wants to restrict it for everyone else.

The Internet *IS* an anarchy, and there is no solution other than to
put it under government control or other means of force. But does it
NEED a solution, and if so, WHY? Please address that.

Otherwise, the first sentence of your last paragraph *IS* the answer.
Control your own computer; establish your own virtual domain; and
reign supreme over it. Be MASTER of your world. All of it.

That is as good as it can possibly get. It goes down hill from there,
pal. You were FREE to post your opinion. It appears that you are not
receptive to others exercising the same FREEDOM in a manner contrary
to yours. And if not, then we are not talking about freedom, are we?

Just remember, your above post would not have been permitted in a
moderated forum. You may say it wouldn't have been necessary. True.
But then you'd never know what the moderator(s) reject, including the
good along with the bad.

But THIS is virtuality, pal. This is where the bad isn't bad. It's
no worse than a game of shoot-em-up, blood-and-gore DOOM with
passwords. You can CHOOSE to be hurt or not. You can CHOOSE to win
or lose. You can CHOOSE every angle and every turn.

It -= can't =- get any better than it already is. And all the emotional, highly charged appeals to reason and sanity in the world won't make it a lick better. But spewing even one invites some sicko to inquire about your mother and her uncle and his pet lizards and their chromosomes.

This is virtuality. You CHOOSE everything that happens to you. YOU are free.....limited only by the extent of your imagination, education, upbringing, ancestry, and..... ability to make choices.

But it bothers you that the next guy is also free, eh?

This is one of the neat things about the American Way. We get to
"vote" in many ways at many different times. But.....

Before I'd blandly go along with the above, I'd be more interested in
USSN's representatives getting on HERE in this forum to give a public
accounting of themselves and the issues. I think it to be vital in
the best interests of the Hobby and the Community that they drop this
legal action and get in here WITH us to resolve matters where they
began and in front of those who are most deeply impacted.

So what's my logic? Well, USSN purports to serve the Hobby community,
right? The Hobby community is well represented HERE in this forum.
Suing or threatening to sue another member of our body *IS* a matter
of public concern.

I am highly supportive of your plan of action, IF there is no other viable solution. But first, I'd like to see if the issues can be peacefully and effectively resolved. Even if USSN were libeled, it appears to have been brought on by an illegal or immoral action on USSN's part, possibly rendering the alleged libel as TRUTH instead. The issue is sticky and stinky, and going to court will only smear the stink on the community.

So it could be BETTER for USSN, their targets, and the community to resolve or attempt to resolve matters here first.

>A 1/4 wave antenna is considered unity (0) gain.

WHO "considers" that? CB'ers? Hams (heaven forbid)? Or just you?

For the record, the gain of a 1/4-wave groundplane *at least* equals
that of a dipole (2.15 dBi). But because of "flattening" of the
doughnut pattern caused by the ground plane, the gain will actually be
more than that of a dipole......pretty much right at 3-dBi.

>For what ever it is worth, a 1/2 wave has 2.4 DB gain.

Now you're just "trolling" or being silly or being downright nescient.
"2.4 DB gain" over what, pray tell?

Radio Shack PRO-43 Modifications FAQ
< Last modified March 8, 1996>

CONTENTS

1. Introduction
2. Which units can be modified for extended frequency
reception?
3. Companies that will modify the PRO-43 for extended
frequency reception
4. The modifications
extended receive 800 MHz (original mod + solderless)
* extended receive 6-1000MHz
keypad beep delete
improved audio
attaching an S-meter
400 memory channels
extended receive (30-68MHz for European model)

---

1. Introduction

As long as there is a continuing demand for it, this mini-FAQ
about PRO-43 modifications will be posted every month or so.
In large part, it is the file PRO43.MOD from
pub/hamradio/mods/tandy at oak.oakland.edu .

The FAQ now includes mods for

(1) extended receive (800 MHz:
original mod + solderless)
(2) keypad beep delete
(3) improved audio
(4) attaching an S-meter
(5) extended receive (30-68 MHz for European model)

There is also a mod for 400 memory channels, but, to quote
its author, it is very complicated, should only be attempted
by someone with moderate to advanced electronics experience,
and is not for the faint of heart or the "weekend technician."
A brief description is included at the end of this FAQ. If
the mod were included in its entirety, the size of the FAQ
would be increased four-fold.

---

2. Which units can be modified for extended frequency
(800 MHZ) reception?

Note: In the United States, it is against the law (Electronics Communications Privacy Act of 1987, public law 99-508, amended 1994 by public law 103-414) to listen to cellular or cordless telephone communications. However, it is not illegal to own equipment that can receive or can be modified to receive such communications, even though it became illegal as of April 1994 to manufacture or import equipment that could be easily modified by the user to receive cellular communications. Equipment manufactured before the cutoff date can continue to be sold until stocks are exhausted. While businesses are forbidden from importing cellular capable scanners for resale, the question has been raised whether an individual can legally import such equipment not intended for resale. The issue is not explored here.

Which PRO-43 units can be modified for extended receive?
The best information is that units sold in the US and Canada can be identified by the following scheme

Modifiable | Nonmodifiable
|
serial number no A in # | begins with A
FCC-ID AA020-300 | AA020-300A

There have been rumors that the correspondence between serial number and FCC-ID may not be perfect, that is, there may be some units judged modifiable by the serial number and nonmodifiable by the FCC-ID, and vice-versa. Anyone with a such a unit should send a message to gdallal@world.std.com so that the information can be incorporated into this FAQ.

Date codes: Inside the battery compartment is a paper label containing the date of manufacture in the form "month A year". For example, 5A3 is May, 1993. The cutoff date after which units could no longer be modifiable is April, 1994 (4A4). So far, the earliest reported date of manufacture of a nonmodifiable unit is 3A4 (March, 1994). There have been *no* reports of a modifiable US 3A4 unit. However, there have been reports of a modifiable Canadian 10A4 unit; it did not have an A in the serial number.

Until the rumors surrounding imperfect correspondence between serial number and FCC-ID can be settled, it is better to check the FCC-ID. But be careful. All units have A's in the FCC-ID. Only nonmodifiable units have an FCC-ID that ends in A.

THE PRESENCE OR ABSENCE OF A FINAL 'A' IN THE FCC-ID
IS A DEFINITIVE WAY OF DETERMINING WHETHER A PRO-43
CAN BE MODIFIED FOR EXTENDED FREQUENCY RECEPTION.
IF THE FCC-ID IS 'AA020-300', THE UNIT IS MODIFIABLE.
IF THE FCC-ID IS 'AA020-300A', THE UNIT IS NOT MODIFIABLE.

It has been reported that some units currently being made for sale overseas can be modified for extended 800 MHz reception. However, it is not known whether this applies to all overseas units or, if not, whether there is a way to distinguish modifiable units from nonmodifiable units.

The PRO-43 was produced under two brand names. My 3A3 unit carries the Realistic name; my 12A3 unit carries the Radio Shack name. At the moment, it is not known whether this represented a changeover or whether both types were produced side-by-side for a time. It is also not known whether their electronics are different.

There are no software modifications for the PRO-43. It is not possible to extend the frequency range of the radio by pushing buttons on the keypad. Such modifications are possible with other models, such as the PRO-51, but *not* with the PRO-43. The PRO-43, made by GRE (General Radio Electronics) of Japan, is one of Radio Shack's few triple conversion units. Radio Shack scanners with software mods are double conversion units made by Uniden.

Modification procedures for other radios are available by anonymous ftp from the pub/hamradio/mods/<manufacturer> subdirectories at oak.oakland.edu.

There is some debate about whether step (5) of the extended receive modification is worthwhile. According to Bob Parnass, from his "Improved Audio Mod", below:

"Now that I have a schematic, I see that the European version of the PRO-43 has different coils and capacitors in the low (mid) band front end filter. That explains why the 75 MHz sensitivity isn't stellar after adding diode D3 to enable 30-88 MHz coverage."

So, if you trash the diode in step 4 or want to quit while your ahead, don't lose sleep over it. On the other hand, quoting ray_reese@tscnet.eskimo.com (Ray Reese),

When I purchased my PRO-43 and did the mod for adding 54-88 Mhz, using the removed cell. diode, I wanted to be able to listen to the sound carrier for the tv channels 2-6 as well as the 72-76 Mhz band. It is worth the trouble to make the mode and it does work well in my area, despite not having the correct coils for that band area. Do the mod anyway, but [if you've trashed your original diode], use a 1N4148 fast-switching diode. Perhaps a 1N914 might do the job also. They can be found at Radio Shack for a cheap price.

---

3. Companies that will modify the PRO-43 for extended

frequency reception

If you'd rather not do the modification for extended
frequency reception yourself, Cellular Security Group, 106
Western Avenue, Essex, MA 01929 (508/768-7486) will do it for
$40, which includes insured UPS return postage. However, CSG
will not move the diode to extend the low band to 88 MHz; they
only remove the diode to unlock the 800 MHz frequencies. When
CSG is mentioned on the net, two types of comments follow:
testimonials from satisfied customers and comments from those
with the technical skills claiming that the service seems high
priced for just removing the diode. But, there have been *no*
reports of shoddy work or damaged radios. (They've modified
two of mine.) Units are processed within 24 hours of receipt.

Grove Enterprises' newly advertised Repair Service will
perform the mod for $40 plus shipping. They will move (rather
than just remove) the diode in units that can benefit from it,
but state that there is no way to tell whether the diode
should be moved without looking inside. They claim that the
determination can not be made from the serial number, FCC-ID,
or date of manufacture. For further details, call Grove at
704/837-7081. In order to get a unit modified, a service
order number must be obtained from the same telephone number.
Packages without a SO# will be refused.
---
4. The modifications

From: armille@afterlife.ncsc.mil (A. Ray Miller)
Summary: cellular (870-890 MHz) and low band (51-88 MHz) restoration for PRO-43

A few people have mentioned the cellular mod for the PRO-43; it turns out
you should not remove but MOVE the diode. Doing so allows cellular coverage as
well as low band (up to 88 MHz) coverage.

Acknowledgments to Grove Enterprises; this information came from them.
They are selling the PRO-43 for $300 which is $50 less than Radio Shack.
I have no connection with them other than as a satisfied customer.

PRO-43
Cellular Frequency Restoration and Low Band Expansion

Note: It is not lawful to monitor cellular or conventional mobile telephone
conversations.

The following procedure requires familiarity with microcircuit soldering and
will violate your warranty. Grove Enterprises assumes no liability resulting
from its attempt, nor will accept the modified scanner for return under any
condition.

TOOLS NEEDED: Fine point, low power soldering pencil; solder wick or a
desoldering tool; pointed awl, hemostats or pointed tweezers; small Philips
screwdriver; solder.

1) Remove the battery, antenna and back cover (held in place by four screws).

2) Remove the six screws holding the top circuit board in place. Carefully unsolder the two antenna connections from the board. Bend the antenna ground tab fully up from the board. Carefully lift the board, unplugging the black connector at its base, and lay the board out of the way on its bundle of colored wires.

3) Remove the two screws from the next board and lift it, carefully unplugging the white connector at the bottom of the board. Lift it up and lay it aside on its brown wire (which can be unplugged if necessary).

4) Unsolder and remove the metal shield from the final board, revealing the microprocessor; note the row of diodes labeled D1-D5 above it. Only diodes D1, D2, and D4 are present; assisted by a pointed tool, unsolder and remove D4, the lone diode (this restores cellular frequencies which will be searched in 30 kHz steps).

5) Resolder the removed diode carefully into position D3 to extend low band coverage to 88 MHz.

6) Reassemble the boards, paying particular attention to the alignment of the plugs. Test the radio by entering any frequency between 870 and 890 MHz (cellular) and 51-88 MHz (low band).

From: IN%"savage@dg-rtp.dg.com" 2-FEB-1995 17:55:07.31

BTW, I did something similar [to the mod that follows] but MUCH easier... No soldering, removing antennas, PCBs, etc..

Just open up the Pro 43 and look down on the bottom PCB from where the batteries usually lie. You'll see the diodes there. Simply take an xacto knife and and break the solder on the D4 diode (left-most on mine) on the side facing you. I just cut back-and-forth for a bit. Once the solder (it's surface mounted) is weak enough, I just bend up the diode a bit from the PCB. Presto. I left mine hanging on the one side with solder. If you continue to work it a bit, you can probably remove the whole diode.

--Ed

From: springel@umich.edu (Jason G. Springel)
Subject: MODing a Pro-43 without soldering

I just purchased a new Pro-43 to replace my Uniden 200XLT after reading many of the praises for the Pro-43 on this newsgroup. I decided to try and MOD it, but don't have a lot of experience with a soldering iron. After examining the scanner's innards, I found it was quite easy to "fix" with nothing more than a minature philips screwdriver and some small needlenose pliars.

********** Standard Discalimer from other MODs:

1-It is against the law to monitor cellular or mobile telephone calls.

*****2-Procedures outlined below [DO NOT] require knowledge of
microcircuits, soldering and assembly techniques.

*****3-You will [NOT] need a low-wattage soldering iron, solder and
other various tools to help in the procedure.

4-The following procedure will void your warranty.

****
Here is my new MOD:

Step 1

Remove the battery, antenna, and back cover which is held in place by
four screws. Place the scanner keypad-side down on your working surface.

Step 2

Remove the six screws holding the top circuit board in place.

Step 3

Using a VERY small screwdriver (I used one from a Radio Shack kit),
remove the two screws from the lower circuit board. Looking down at
the unit, you will see that the screw on right side of the lower
circuit board can be easily removed. Remove the screw on the left side
by by sliding the screwdriver between the top circuit board and the
metal frame which holds the two boards together.

Step 4

With these two screws removed, you can now lift the entire top panel
(antenna, volume, and squelch knobs) along with the top two circuit
boards as one unit. The two circuit boards will be connected to the
final circuit board (the one attached to the front section of the
scanner) by several wires. Simply set the top panel/circuit boards
alongside the front section of the scanner and you can leave these
wires connected.

Step 5

The microporcessor is located under the large metal shield on the final
board (the front section of the scanner with the display and keypad).
If you look under metal shield from the side closest to the bottom of
the scanner, you should see the row of diodes labeled D1-D5.

Only diodes D1, D2 and D4 should be present.

Use a small pointed tool to break off D4. You actually don't have to
remove it completely (unless you want to use it to restore additional
frequencies as explained in other MODs), you can just lift one side so
it dosen't make connection and then put a small piece of tape or heat
shrink over it, so it won't. Make sure it's not lifted to high or the

boards will not fit.

This will restore Cellular Frequencies in 30 kHz steps.

Step 5

Reverse the process to replace the top panel/circuit boards and the two screws that connect the lower circuit board. Replace the 6 screws from the top board. Replace the cover, etc.....

...the diode positions on the cpu board, of which only three are filled look like this. Where X equals a diode soldered in place.

D5 D4 D3 D2 D1

O X O X X Normal configuration

O O O X X Cellular modification(D4 removed)

O O X X X Lo-Band modification(D4 in D3's place)

These directions were based on an original MOD design whose origins I do not know. My thanks go out to the original author of that MOD! Hope this helps those of you who do not own a soldering iron!

PRO-43 Shortwave & Extended Receive
Al Mellon N8KLI

(This modification is only possible on radios able to be modified to receive the full 800 MHz range.)

Scope and nature of the modification: To allow the PRO-43 to receive frequencies from 6 MHz to 1000 MHz. This is accomplished by setting the PRO-43 to non-standard splinter frequencies, the CPU will then step the radio beyond the normal band edges. To derive the non-standard splinter frequencies it is necessary to change the diode configuration matrix, and to use the monitor-search function. The hardware modification should take about thirty minutes. The remaining programming / search will take as little as 45 minutes (depending on how interested you are in the signals you encounter during the 806 MHz to 30 MHz search to be run).

I made a few attempts to make deals with various radio mod shops. Most felt the time needed to make key pad entries was too long to make a profit.

< This is a lengthy modification. It can be found in its entirety in /pub3/hamradio/mods/tandy/pro43swl.zip at oak.oakland.edu >

From: ross@novax.llnl.gov
Date: 19 Aug 92 16:51:08 GMT

Here is my keypad beep delete mod for the RPO-43:

1. Remove battery.
2. Remove back cover (4 screws).
3. Remove top board (6 screws, desolder two antenna connections and bend

antenna ground lead up out of the way). Be careful of black connector at bottom of board. Flip board over and lay aside (wire connectors need not be disconnected).
4. Remove middle board (remove 2 screws and wire connector). Be careful of two multi-pin connectors along underside of board. Set middle board aside.
5. Locate 10 pin connector on side of bottom board (labeled CN3). Note that one end of connector has pin 10 labeled as such. Count back to pin 6 and bend pin 6 ninety degrees towards the large RF shield. Make sure the bent pin clears the RF shield.
6. Reassemble and your done OR do the cell mod since you are so close.

Have fun. Gary Ross >usual disclaimer>

Subject: Improved audio for the PRO-43 portable scanner
From: parnass@cbnewse.cb.att.com (Bob Parnass, AJ9S)
Date: Wed, 2 Dec 1992 01:15:35 GMT

IMPROVED AUDIO FOR THE PRO-43 SCANNER

by Bob Parnass, AJ9S

The Radio Shack PRO-43 scanner audio is too bassy.1 The lack of treble makes it difficult to hear the PRO-43 in noisy situations, especially while listening in a car or truck. Louis Shirley sent me a schematic and suggested I remove C341, a tiny 0.015 ufd surface mount capacitor.

I'm glad to report that removing C341 made a great improvement. The audio is now much "crisper," more like the Uniden 200xlt, although still not quite as loud. Turning the volume control up still overloads the PRO-43's small, internal speaker, but there's less need to do that once C341 is removed.

The PRO-43 contains 3 printed circuit boards, and the middle (second) board contains the audio circuitry. Finding C341 is difficult, as it is neither marked with a value nor a component designation. It is located on the foil side of the middle board, under IC304, an LM386 amplifier IC. C341 is in parallel with, and physically next to, R350 (33,000 ohm). R350 is slightly larger than C341 and is marked 333. Both R350 and C341 are connected between pin 2 of the LM386 and ground.

A Note About 50-88 MHz Reception

Now that I have a schematic, I see that the European version of the PRO-43 has different coils and capacitors in the low (mid) band front end filter. That explains why the 75 MHz sensitivity isn't stellar after adding diode D3 to enable 30-88 MHz coverage.

Subject: S-Meter for PRO-43
From: schuster@panix.com (Michael Schuster)

Found this on the Fidonet scanner echo:

=====begin quoted text=================

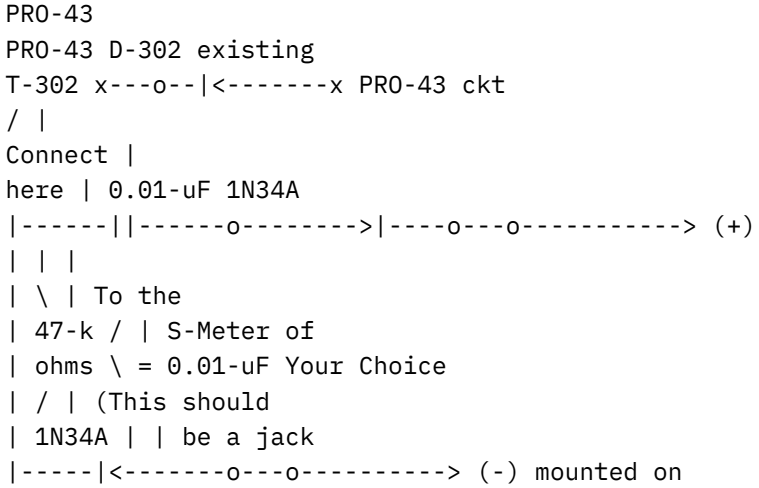
Date: 02-06-93 00:24
From: Bill Cheek
To: All
Subject: PRO-43 S-Meter!

Greetings Scanner Fans!

It had to happen! The fundamentals for an S-Meter exist alive and well in the PRO-43! Only a simple circuit and your choice of meter, analog or LED, is required for a jim-dandy S-Meter function!

The key point in the circuit is the cathode of D-302 located on the bottom (solder side) of the AF Board (middle board). You will need the Service Manual for the PRO-43 to find it as it's not marked and it would take me 10,000 words to guide you to exactly where it is located. Call Tandy National Parts at (800) 442-2425 to order your manual: approx $10. Now here is the deal:

Locate D-302 and either build the following circuit right there on the back of the AF board in the vicinity of D-302, or solder a wire to the cathode of D-302 and route it to somewhere else more convenient to feed the below circuit. This wire ought not to be very long, though, say not more than a couple of inches. Refer to the ASCII schematic diagram as follows:



^ PRO-43 Ground^ the case of
Legend: the scanner.
|
1. ---||--- and = are 0.01-uF capacitors; disk, mylar, monolythic, chip
|

2. --->|--- and ---|<---- are germanium diodes, 1N34A
| is cathode
< is anode

3. o means a connection, preferably soldered

4. The 47-k resistor is self-explanatory, I hope.

5. -------- and | are wires/conductors.
|
|

6. x is existing PRO-43 circuitry

If you use an analog meter, preferably a real S-Meter like salvaged from an old junked CB rig, then rig it as follows to connect to the circuit above:

```
5-k Trim Pot
(+) --------/\/\/\/\---o--------|
| | |
This should |-------| |
be a plug of +
some sort to The S-Meter
connect to the Terminals
mating jack on -
the scanner |
|
(-)----------------------------|
```

You can also build the 10-segment LED S-Meter as shown in Volume 2 of my SCANNER MODIFICATION HANDBOOK, available from leading mail order radio dealers everywhere. ISBN 0-939780-14-3 published by CRB Research Books, Inc. Commack, NY.

After connected and working, locate the PRO-43 very near a known strong transmitter, perhaps a ham transmitter, a police cruiser, your favorite security guard's handheld or right next to a cordless telephone, or anything else known to transmit a strong signal. Tune the scanner to the frequency, and adjust the 5-k trim pot above so the meter reads exactly full scale. All other signals will read proportionally lower to yield "relative signal strength" measurements! A hell of a circuit here, boys & girls! Have fun!

Subject: PRO-43 w/400 CHANNELS HERES HOW!

IT IS NOT FOR THE FAINT OF HEART however.

PRO-43 ENHANCEMENT
MEMORY EXPANSION & "FADE-AWAY" LIGHT
Brett Bennett 4/12/94
bbb@kuhub.cc.ukans.edu
Copyright 1994 B&D Electronics All Rights Reserved

INTRODUCTION

The following document details two enhancement modifications that are possible on the Radio Shack PRO-43 scanning radio. The first modification doubles the factory standard memory capacity, allowing you to enjoy an additional 200 channels of memory, plus 10 more monitor memories. After completing the first modification, it is a fairly simple matter to add a 7 to 10 second delay feature to the LCD back-light lamp circuit. I designed and performed these modifications on my PRO-43 and they do work. As I understand it, there (has been/is being) presented in WORLD SCANNER REPORT a similar memory expansion. I have not seen this modification and for all I know it is a better way of doing it. What is presented is a 'clean-room' design of my own that to the best of my knowledge is the only one to also offer a time-delay for the LCD back-light. Having said that, let me say:

I ASSUME NO RESPONSIBILITY FOR ANYTHING THAT MIGHT HAPPEN TO YOUR RADIO SHOULD YOU OR ANYONE ELSE ATTEMPT THESE MODIFICATIONS. WHILE REASONABLE CARE HAS GONE INTO THE PREPARATION OF THE FOLLOWING DOCUMENT, I CAN NOT GUARANTEE THAT THERE ARE NOT ERRORS.

The procedure described below is very complicated, and involves the soldering and desoldering of very tiny components and the cutting of printed circuit board traces. While the procedure is not irreversible, it will leave permanent scars inside your scanner. It should only be attempted by someone with moderate to advanced electronics experience. I don't think it should be attempted by, to quote someone else, a "weekend technician." If as you read through this you feel intimidated by the jargon and required procedures or if an electronic schematic looks like a strange piece of modern art to you, then this might not be the 'mod' you are looking for. The following document will assume you have obtained the materials listed below, especially the Service Manual, and you have studied the circuit in some detail. I will not describe

in great detail where every component is or where every solder point on the logic board should be placed. Having the Service Manual, and having studied the drawings therein will allow you determine to where it is I refer.

REQUIREMENTS

1 - PRO-43 Service Manual. (Tandy Parts # MS-2000300 - approx. $6.00)
1 - CD4053 - Triple - SPDT analog switch - Surface mount package (DigiKey #CD4053BCM-ND - approx. $1.50)
2 - 93C67 EEPROMs (Tandy Parts # MX-8050 - approx. $13.00/each)
1 - 100k x 5 resistor network. Common lead type. (DigiKey # Q5104)
1 - UN2111 PNP transistor (Q1 on Logic PCB. Tandy Parts #)
1 - 1 uF 16v capacitor.
1 - 10 MOhm 1/8-1/16W resistor.
Misc.:
Wire wrap wire-30 gauge. (Radio Shack)
Grounded soldering iron with approx. 1/32" tip or smaller.
Desoldering Equipment.
Digital Volt Meter. (Used to double check your VCC and Ground connections, pre-check switching assembly)
Utility knife with fresh sharp small blade. (Needed to cut traces.)
Strong hand held magnifying lens. (Needed to check solder joints.)
+5-10 Volt bench power supply. (Used to check switching assembly.)
Anti-Static work place and grounding wrist band.
Very fine needle nose pliers, wire cutters.

Actually, I think we need to see all this for what it is: a bunch of
children poking an old dog with sticks.
Bill Cheek plays the part of the old dog quite well; he presents no
problem until he's poked with a sharp stick. Then he turns into a snarling,
yelping, biting whirlwind.
Some children have discovered this, and get great joy out of seeing ther
transformation from cuddly dog to whirlwind. They poke just to see it.
When it's pointed out that if they's put the sticks away, there'd be
no problem, they immediately tell us the dog's rabid.
Well, 'tain't so. Bill responds the same way most of us would respond
if poked the same way.
Those who do the poking need a little prodding to grow up.

I have the same unit with about the same number of years on it. My Uniden charger puts out 12.7VDC with no load @ 120VAC. The NICAD pack when charging is 9.7VDC and 8.5VDC when fully charged (both figures are with no load). I haven't had to replace the battery pack yet but your approach should work. It sure is bettery than paying $35-40 for a new NICAD pack. I didn't measure the internal resistance of the battery pack. Whose NICAD's did use use?

Only if it has a date code of 2A4 or prior. The date code is a little white sticker inside the battery compartment.

If you got the PRO-43 new after March, 1994, then it probably will not be modifiable for cellular.

Well, to some folks, they might be better than nothing. But don't
expect mircles. Downconverters are not all that sensitive, and they
will decrease the dynamic range of the receiver. You'll hear all
there is to hear and more. Lots more........ :-(

Best bet is to put your money toward an 800 MHz receiver and let it go
at that. But it might be a learning experience to build the kit and
see for yourself. Maybe you can sell it for what you got in it after
you've cut your teeth and learned on it.

I don't use 'em and wouldn't unless there were no other way out.

>Right, like you know anything.

I don't give a hoot where you were born. WHERE doesn't matter. I'm
not even sure it is recorded into history. Where you were born is
greatly overshadowed by HOW you were born.

>Bill, it's to bad you can't deal with life honestly.

Ok, we will deal with it honestly, then. Poor little ol' YOU were born without any eyelids. A birth defect, maybe due to thalidomide, maybe to something else - who cares. Even that doesn't matter, in comparison to WHAT the doctors did for you that became a legend in its own time for the medical books.

Your being without eyelids was a major concern to the doctors, who knew you'd be blinded in only a short time unless they could do something. So they did something. Seems they wheeled you into the operating room and gave you an old fashioned circumcision, lopping off a bit extra for what came next.

They cut that sorry ol' foreskin right down the middle and grafted each piece onto the areas just below your eyebrows. A stitch and a graft of muscle tissue gave you working eyebrows. How ingenious!!! But what about eyelashes?

Those came fifteen years later after you had sprouted some pubies. The good docs plucked 'em all and grafted them curly little suckers right onto your droopy eyelids to make you the cutest little papoose on the entire reservation.

What they failed to discover in time to fix was how your optic nerves got crossed up with your rectal nerves giving you a shitty outlook on Life.

But at least you got eyelids and eyelashes, huh, John Mackey?

You sho 'nuff is one brown-eyed, blinkin', squat-to-pee, fool that all the fellas call, "Baldy", I'll tell ya what.

Poor fellow.....

I have some 20-yr old Belden 8214 and 9913 still in service. The UV problem, if there is one, is not a concern. As for RG-213 and RG-214, both are very lossy at UHF and are quite unsuited for scanning. RG-8 and RG-58, of course, are also unsuited for scanning, but you got those right.

Agree 0n 2045 purchase. I just picked up a 2036 at a RS Tent sale on
clearance, so I suspect they are being phased out. I paid $149 for
it. I didn't need a primary scanner as I have a 2006 that I really
like. The newer model will meet your needs and probably prove to be a
generally better piece.

Best to you

As Ken said, some of the reviews are full of fertilizer! <g>

I have an MS-8 with my R8 receiver, and I love it. I think it's an excellent speaker, and would buy another one in a heartbeat, if I need it.

For your information, the old Drake MS-4 is excellent as well.

The main place I have seen negative press about the MS-8 is where the reviewer doesn't have a clear understanding of the difference between a "hifi set" and a communications receiver... <g>

I had a BC200XLT for a number of years before it took a dump and died on me. I loved it and I really want to get it fixed, what I like about that scanner is that it has the seperate battery pack so you can buy a extra one or two and swap them out when needed, I dunno if you can still get them though. Also, I really liked the fact that the first channel of each bank is a priority channel when the bank is activated, and channel 1 is always a priority channel regardless. It also has the instant weather channel button which if you're in an area prone to weather calmities, it's great. It also has the standard search features.

Some of the drawbacks of that scanner is that it's big, compared to the newer handhelds at least. It only has the ni-cads so when the batteries die, and you don't have a charger handy, unless you have an extra pack, your S.O.L. I'm a press photographer and I beat the crap out of it, and it held up well, and it's easy to work on yourself.

After that one died I went and bought a PRO-60, which has been a love-hate relationship. I just got mine back from repair for the third time, the A/C jack input broke twice then I had a problem with the volume knob. I haven't had the thing in my hands since May when I put it in, luckily Rat Shack let me borrow a loaner till I got it back.

The things that I like about it are it has programmable priority so you can select any channel to be the priority fequency. This helps alot in my line of work becuase I can just switch over from Ventura Fire to Oxnard to LACoFD to whatever I need. It also has military a/c capability which is cool, it's nice to have at airshows and if you're close to a miltary base like I am. It's also nice and small, really compact. And it runs on AAs, which is nice when the thing dies in the middle of the night on a brushfire and you just dig into the bag and grab 6 more. The scan speed of 50 per second is nice too.

On the bad side, you can only have one priority channel, which for me is one of those catch 22s. I like to set the FD response channel as one priority and their dispatch as another. I hoping mine is just a lemon or else it doesn't take much abuse. It also is kinda complicated in the search mode, there's a couple different ways to do it, but I don't use that much so maybe it's just me. All in all, though not a bad scanner.

Howdy,
Trying to see what I can get in the military satcom arena...
specifically traffic heading out to Hawaii /Guam/Iraq (I'm on the west
coast).
Is anyone out there actually hearing anything on the milsatcoms?
I have a multitude of mil freqs. (they are in the new 5th edition of
ArtSci's "Federal Government Frequency Assignments").
A superb reference manual (with CTCSS tones) ..... but there are so many
freqs that they far exceed the capacity of my 9k.
Any help would be greatly appreciated.
Temp
P.S. A big thank you to Mike Mattel, LAX scannist, who told me about the
ArtSci pubs.

The Los Angeles Police Department has one frequency that is utilized for all the "HotShot" calls in the city. That is Tac-1 (154.830 Mhz) . This tac is monitored by the airunits. All " HotShots" [Code 2-High, Code 3 (Calls in Progress)] are broadcast on this freq by the EBO (Emergency Board Operators in Communications)and simulcasted on the approprorate area frequency of occurrance and the surrounding areas that boarder. Also all Officer Needs Help , Assistant , and Back-up requests in the city are simulcasted on Tac-1 along with vehicle pursuits .

There is plans to replace the Tac-1 with the new freq (507.0125 or 507.1125)[unknown which at this time, I read conflicting information in different scanner freq books which one will be used] in the near future. But as of August 1996 these freqs are not operational until the new repeaters are in place at which time the entire expanded LAPD frequencies will be in use. This will also include each division will have it's own dedicated base channel instead of sharing .

By the way Excellant Web Site Tracy....

Any more questions about LAPD, feel free to e-mail.

Jon

3429. Pro-34 800Mhz problem.

Newsgroup: rec.radio.scanner
Date: 1996-09-02 00:00:00 UTC
From: Steemer <stanl@primenet.com>
Message-ID: <50gigu$1qb@nnrp1.news.primenet.com>
Source record: 224570
Cross-posted to: alt.radio.scanner,rec.radio.scanner

My Pro-34 for the longest time has had a strange problem. While listening to anything in the 800Mhz section the audio has a bad problem. There is a lot of crackling and stactic noise. If I squeeze or move the radio around the problem get worse. If I set the radio on a table or something that is still, everything seems fine, unless the volume is up too loud. Just the sound coming out of the speaker while receiving is enough vibration to induce the problem. If I use an external speaker or keep the volume low it's fine.

The entore problem seems like a loose connection or something, but I have tried many times looking inside for bad or loose connections, rubbing plates or sheilds and other things that could cause this, but I have found everything to be perfect.

Why would this problem only exist only in the 800Mhz section? Why would this problem exist at all?

Stanl

Monitoring police channels in an English town brought out this gem:

It was chucking out time for the pubs, and there was a large fight brewing in a rough area. Police were dispatched, and as suspects were chased, backup was drafted in. A WPC and the dispatcher had this to say:

Dispatcher: 489, could you describe your suspect...?

WPC: <Panting heavily while running> He's big, Irish and is waving an axe!

It's hard to believe you weren't getting reception. The only possible
reason I can think of is if everyone is useing 2 watt hand-helds,
which of course makes no sense either.

What was/is the antenna height? Could a nearby high power transmitter
be washing out reception? With any of these set-ups, how low could
you set the squelch before you got hash?

Mark

The truth as I perceive it to be.
Your perception will be different.

L1: Approximately 30 turns about a say, 2 1/2 inch diameter form
You can vary the inductance via an alligator clip

C2: Variable capacitor, say, 365 pf from a BC band receiver

Start by varying L1 with C1 fully meshed; then adjust C1

To mod or not to...that is the umption

Here we have a small squeaky voice of
dissatisfied slurpers drivelling their
distate before us.

Here we have a small "you cannot please
me anytime, anywhere, anytime, anyhow...
but I will tell you your business by
being the mod...."

Here we have people who now are building the
jail, allowing the miniscules who want to be
important become the mod and then in unison
giving the combination of the "locks" to the
malcontents who now will take their place
and Jail all who go against their answers.

Here we have "official" administers of what
is allowed or not...with no real need to be
so controlled by anyone else by one's mind
and what the fingers do and don't do when
one chooses which thread to read.

It's always the case: the ones who cannnot
live with ideas from all are the ones who
then want to control the ideas from all...
and nominate themselves because no one else
wants them.

You create your misery when you allow your
freedom to extoll be cut off in mid-thought.

then we will have a cry for a NON-moderated
group.

ideas are anarchy...they have no limits.
From this outpouring of all ideas one will
always discover that the shit eventually
allows a rose to grow.....

To ken....

You are the Bakersfield guy, right? we contacted last
year.....

the reason I put those freq's in to Search was due to
the fact that they are where the STATE freq's are and
Dept of Forestry and more....those state-wides could be
in use down there....and if they are, then probably some
good traffic would come out on those little-used ones in
LA area....

Evidently you don't play the scanner game as a pro videog-
rapher does when searching out "answers" to get more info
as to what is going on in the locale he is going into....

you listen to all and maybe discover a "opening" which will get you there faster....or know more about ti because the talk is freer and less "guarded".....

that was my idea. I don't have the Los Angeles Basin book, but what works up north may work down south due to the amount of traffic going on which creates an outlet for more detailed talk.....

People in this business have to learn that "what is obvious is that you assume too much as being on your wave"....there are others. There are no perfect waves....but they do exist in someone's mind.....

No you aren't John, you are dancing like a fool. You said "Your ISP told
me they were going to
restrict your access after you made so much trouble AND were soliciting
for young
gay boys on rec.radio.swap."

Quit lying and dancing. When your were sniveling and lying to my ISP the
forged posts
had not even been written. Now why would they bring up something that

hadn't happened?
Why do you lie John? Maybe I should make up a whole bunch of things
your ISP told me and then do the dumb John routine, " Uh, maybe I was
wrong but that's what they told me. uh huh, uh huh."

> >> Only a few days later you SUDDENLY stopped
> >> ALL postings & never returned.

I have been there numerous times John, another lie.

> Maybe your ISP never told you taht, but they did tell me that. Maybe
> they were lying, who knows.

You and I know you are doing the lying. You record still stands. Now you
are blaming your lies on my ISP. That is good John.

> >Is this another I forgot thing again? We discussed it before and you

> to me about inappropriate activity on his repeater.

Well it was verified by another user on here yesterday. I never mentioned
the repeater
operator getting involved John so his lack of knowledge of the incident
means nothing.
It's the truth John. You haven't denied it you just blow your typical smoke

screen and avoid responsibility for your actions.

> >Bottom line John, you are a sad guy that posts BS to try and stir
trouble

> few facts, son.

Lies again John. I only responded to your E-mail and posts. I didn't play your E-mail-bomb tricks I responded to YOUR posts and E-mail. You couldn't take it and started to cry. You are pathetic. You wouldn't know facts
if they were thrown in your face.

> >OK John, are we on for the bet? $2000 says you are lying about what my ISP
>
> As a rule for myself I NEVER bet or even buy lottery tickets. I sure
> wish I didn't live by that standard right now.

What a liar. You lied saying "Your ISP told me they were going to restrict your access after you made so much trouble AND were soliciting for young
gay boys on rec.radio.swap." You can't back it up and even your facts are chronologically wrong. Are all in your family liars or did you just develop the characteristic
on your own?

interesting...i got a flyer in the mail from RS last week with a coupon for a free catalog.

perhaps RS, which i generally like, has discovered that its past policy has caused it more harm than good, and is changing.

perhaps it also will re-evaluate the policy of asking customers for their names, addresses, etc. some (myself included) consider this an invasion of privacy, and a waste of time.

To any and all concerned,
I, for one, have no desire to see this newsgroup moderated. Nothing personal, but many of the people I see stepping forward for the duty/honor/burden, are the biggest flamers. It seems no more than a petty attempt to secure absolute power to vanquish there enemies.

One poster put forth the wonderfully simple idea of growing up, and staying on subject. Lets try that, as simple minded as it makes me for also suggesting it. It used to work here.

Some of the biggest flamers here are also very knowledgeable people, whose postings on SCANNING I find informative and useful. However I, and no doubt most people in this group, have NO interest in your past or present problems with each other. Lets stay on topic, and we want need a group boss. No offense and thanks. 3466. Scantenna Performance Problem?

Newsgroup: rec.radio.scanner
Date: 1996-09-02 00:00:00 UTC
From: ay901@torfree.net
Message-ID: <Dx39z7.91t.0.sheppard@torfree.net>
Source record: 224628

Hi,

I just installed a Scantenna (from Grove Enterprises) and find the reception to be poor to okay. Poor on the low VHF end (around 118-142 Mhz) and about equal on 400-900 Mhz when compared to the buil-in antenna rod on the PRO-2006. Scantenna is mounted on Tv mast 30 ft above ground via coax RG6/U (45 ft) and coax shield is grounded at receiver.

With the antenna connected, reception on low VHF is greatly improved by installing the buit-in antenna rod.

What gives? I am both baffled and disappointed by this result.

I welcome your comments and suggestions to help solve this problem.

Thank you in advance.

Well.....not only does it appear THIS group is his target, but he
actively, blatantly *discouraged* discussion. Geez, his motive and
his actions have been.....ummmmm....."emotive".

>Tim is working within the rules of the road for usenet and is
>observing the proper protocol and ettiquette. Any one can submit an
>RFD; usenet has rules to ensure that the proposal is properly debated
>and voted upon. The vote ensures that no one can 'force' a proposal on
>a group.

So when's the vote? Who are the nominees? There is nothing being
communicated about it, to speak of. And it looks like Payne picks and
chooses the nominees.

>Considering that the issue was raised here, and some support was
>voiced, his effort was constructive and appropriate. Whether the
>proposal is approved or not is for another day, but there is nothing
>wrong with what Tim did or how he did it.

Maybe not technically. But do you like lawyers? If not, it's
probably because they know the rules so well they can use them to
their advantage and to others' disadvantage. Payne appears to be
working along the same lines.

>Personally I don't consider you more or less 'evil' than the people
>you bicker with, I just want it stopped.

Don't you have enough control over your own computer without having to
bother with trying to control others?

Who are YOU to "want" anything of that nature? The power is already
in your hands. Why do you want more? You can STOP it with your own
fingers anytime you want to.

> And I don't care whether you,
>or they, have the satisfaction of getting the last word in. Someone
>has to walk away and ignore whatever the other guy says next.

And you want to do the commanding of which one, more or less?

>>One wonders WHY, then, this push to moderate the newsgroup. It will
>>have the effect of eliminating me and other knowledgeable people from
>>freely participating with and among you.

>Ah, Shakespeare.....:"Death, where is thy sting?"

Ummmmmm....sorry, but try Jessica Mitford: "O death, where is thy sting? O grave, where is thy victory? Where indeed?..........."

> Enough people who remain to make the conference worthwhile....
> you're certainly in the expert category, Bill, but no one
> is irreplaceable.

Of course not. That is the way of Life, itself. My point was less personal and more technical. I will not waste my time composing material that "might" or "might not" be "allowed" by a moderator who wants to read into what I say. Other people whose time is valuable could tend to think along the same lines.

The inescapable conclusion is that those who push for a moderated group want to have their own sacrosanct podium.....their own gavel and sword......their own worshipful, obedient congregation. The good Reverend James Jones was the epitome of this syndrome, but it exists to lesser degrees everywhere.....even here.....especially here.

>A great many people here also participate or lurk in the scanradio
>conference. Their votes will tell one way or the other.

-= IF =- they get to vote, yeah.........

>I share your concern about the repressive aspect of moderation.
>However, there are a number of really good people in this newsgroup
>and I personally would be willing to place the conference in their
>hands. The moderator role is a person who works behind the scenes,
>without the 13D Boot technique. Moderator positions can be reviewed
>and revoted periodically. I like that approach better than an open
>flame season and twit filters approach - but I'm just one voter.

You don't like controlling your own computer and leaving others the hell alone to control theirs?

>> GONE WILL BE THE EXPEDIENCY AND TIMELINESS OF
>>THE GROUP'S COMMUNICATIONS.

>I participate in a number of listservs. Delay is not a problem.
>Propogation delays on usenet exceed moderation delays. Most of us are
>hobbyists who have to squeeze our internet time into our real lives -
>family, work, etc. So what we don't read today we'll catch tomorrow.

But that's YOU speaking for YOURSELF. And you are speaking of a listserver, not a moderated group where the posts pile up until the moderator chooses to release them.

>>Before you decide, do a real cheap experiment for a minute. Use your
>>newsgroup reader to call up the server and download the list of
>>21,000+ newsgroups.
>>I just did. And found exactly 27 moderated newsgroups out of over
>>21,000. TWENTY-SEVEN?

>I did another count. I counted how many listservs I read, versus how
>many unmoderated conferences I read.
>My personal count was 50-50.

We're not talking about listservers and mail lists.

>And when I thought about the moderated
>ones and asked myself, "Which conferences are harmed by the efforts of
>the current moderator?", I could only think of one.

Hardly a scientific approach. I noticed how you satcheted around the ratio of 21,000 unmoderated newsgroups to 27 moderated ones. Obviously, moderation has a lot against it.

>I personally do not feel that anyone is trying to 'steal' this
>newsgroup by pursuing the moderator idea.

Maybe not. But then why don't the ring leaders of those who want the moderator conrol just trapse off and start their own? It would be so easy that way!

>We can all vote on the
>proposal, and if a moderated group fails we'll all end up reading
>alt.radio.scanner anyways. Again, I question why you feel you have to
>use personal invective to make your point.

Explained above. The concept was launched on personal invective. It was an emotional, highly charged atmosphere into which the idea was born, propagated, and ..... shoved down our throats. All in the name of righteousness and maybe even a deity or two. Reminds me of the Crusades of the medieval times. Made a nice excuse to rape, rob, pillage, loot, and burn.

>This post probably belongs in the news. hierarcy, but I looked in
>news. announce and news.groups and didn't find the RFD or any threads
>about it. Anyways, I've exhausted my 2 cents' worth, so I'll drop it
>now. Thanks to those of you who read this far.

So is the move to "steal" this newsgroup legitimate or not?

If that is so, then GREAT! That would be an example of the American Way.....the exercising of freedom. As it is, I didn't see Payne calling for any discussion or being very specific, so questions loomed accordingly. Natural questions.....

>If that is not the case then I agree totally with what you are saying.

That's the basis on which my reservations are premised. No one could argue or object to the starting of a separate group. At least, I don't see how.....

>This is the internet, not fido-net. Censorship is what we need to be
>fighting against instead of trying to promote moderation.
>If I want want moderation I will go to Fido-net.

Exactly. Though I have to add that Fido moderation is a lot looser than Usenet moderation. Fido's is just that: moderation. Usenet's is CENSORSHIP. A few people are making a mountain out of a molehill with respect to the Fido SCANRADIO forum. Without being "exact", I'll submit that there have been maybe 3-4 admonitions and one eviction in that forum in the last 60-90 days. It really isn't as bad as Duff and Mackey would like to have people believe.

But.....it is moderation, and that means a definite constraint. But that is the way of Fido. All forums HAVE to be moderated with rules, else the forum is not permitted to exist.

The Usenet is certainly a viable alternative, and I see pluses on each side. With rare exception, though, I don't see any pluses for a moderated Usenet group. One exception is for people who WANT it and who don't deprive others when they first set up such a group. Another exception would be for very special purpose groups, perhaps involving medicine, health, religion, sex, and politics...with the purpose of eliminating spamming and kibitzing. That sort of thing.

My immediate concern is for if Payne wants to take THIS group. He really hasn't set up a discussion, and in fact, has actively discouraged it. To me, that has stink all over it.

IMHO.

3469. Needed: Scanner Template

Newsgroup: rec.radio.scanner
Date: 1996-09-02 00:00:00 UTC
From: grebbler@cris.com
Message-ID: <322a84c6.287129609@news.concentric.net>
Source record: 224631

Greetings,

I found an old scanner in my junkbox and would like to get it going again. I beleive it is a Realistic Pro-33, 200 channel handheld.

I need a picture of the front of this unit (as the front button decal is missing) and the basic programming information.

Please don't suggest going to Radio Shack as they are notorious for "losing" part and info orders (filing them circularly and laughing in the manner of Gingis Khan just before invading a neighboring territory) around here.

Any help much appreciated.

Edward.

Have a PRO-2006 scanner connected to an M-400 decoder. Looking to find the ACARS frequencies in the Syracuse-Rochester (NY) areas. MY antenna is about 75' so should have little trouble receiving anything. Getting tired of just the digital pager traffic (very boring). On the ham side, I have a KAM+, and enjoy the digital modes alot. Maybe on the VHF/UHF side things just aren't that exciting?

Any info. or suggestions appreciated.

Mark, N2WTD

Unfortunately, in a comparison of RPOBE, SCANCAT and SCANSTAR computer controlling software, I find that PROBE is the only one requiriing a PASSWORD, before you can enter the code.

You guessed it....of the three, I have PROBE!

If anyone out there using PROBE has this password, I would appreciate getting it via E-MAIL only, please.

Do not suggest getting it from PROBE'S author, as I already tried that, and was unsuccessful.

You might want to try listening to Los Angeles County Fire Department. They're in the 470 MHz band. I've been doing a search between 470.4125 MHz and 470.6625 MHz on my Pro-2006. Your next best bet would be to purchase a copy of Southern California Scan Fan frequency directory or a copy of the lastest Southern California Expanded Edition of Police Call. The first directory is a must for every scannist's radio room. Happy Monitoring...Brian.

Some comments I have heard this morning from deputies indicate that
they are having some bugs with the system and that it may not go 100%
operational as planned Tuesday morning.

The HCSO is still being heard on the old VHF frequencies but I don't
know how long they plan to simulcast.

Also, I have not heard Hillsborough County Fire or EMS on the new
frequencies yet. They will probably make the switch when the system
does go fully operational. Can anybody else shed some light on this?

Re: Our Client:
U.S. Scanner Publications
Matter:
Defamatory statements posted on Internet by Larry Van Horn
and republished by Scan-L

Gentlemen:

This firm represents U.S. Scanner Publications in connection with
defamatory statements posted by
Larry Van Horn on the Grove Net Internet as "ST Editor" for Satellite Times.
On August 18, 1996,
Mr. Van Horn wrote an extensive letter and posted it to "scanner user
groups" regarding the
affiliation between USSN and RCMA Scanner Publications and the relationship
between USSN and its
writing staff. The letter also incorrectly described relations among USSN
and its subscribers.
Enclosed are copies of a portion of the Internet correspondence, including
the original posting
to which I make reference.

The statements regarding the treatment of subscribers by U.S. Scanner
Publications are entirely
false. Mr. Van Horn states that prior subscriptions to USSN were not
honored when it was
acquired by U.S. Scanner Publications. In fact, the opposite is true. All
subscriptions to USSN
were honored in full, plus two issues were added.

Mr. Van Horn also states that the writers groups for USSN had been fired
or, alternatively, were
on strike. Again, this is entirely false. When U.S. Scanner Publications
recognized it was
unable to pay outstanding obligations to its writers, it promptly informed
the writers groups
that it was unable to pay for services rendered but fully intended to pay
all fees owed as soon
as possible. Copies of the correspondence relating to the relations between
writers for USSN and
the RCMA group are enclosed.

Unfortunately, the defamatory statements by Mr. Van Horn were republished
by the net commonly

known as Scan-L. A republisher of defamatory statements is equally liable with the original party, and we believe the law would support claims against Peter Laws, the individual responsible for posting the defamatory statements on the Scan-L net as well as Arkansas. These legal obligations also extend to the "Grove Net" as well as Mr. Van Horn personally.

The defamatory statements have resulted in a significant number of calls to U.S. Scanner Publications as well as an ever growing number of individuals who are calling to indicate that they will not subscribe until there is some assurance that their subscriptions will be honored and value received in the form of publications.

WE DEMAND that each of the individuals and organizations named above immediately place full-page ads in U.S. Scanner News Magazine, Monitoring Times and Satellite Times specifically retracting the defamatory statements regarding treatment of staff writers, the characterization of subsequent writers as scabs and the false claim that subscriptions were not honored when U.S. Scanner Publications took over U.S. Scanner News Magazine. The ad should also specifically state that no writers were fired and U.S. Scanner Publications has committed itself to paying all writers for services rendered when financially possible.

We also require that each of the "nets" involved publish on their home page, as well as on all user group forums, specific statements retracting all of the defamatory statements referenced above and encouraging any interested party in contacting each of you to confirm that the original statements published on the Internet were false and without factual basis.

Although we demand retractions to mitigate the potential damages to U.S. Scanner Publications, we are not waiving any claims for damages. We are in the process of determining the scope of damages and will advise you immediately once we have made an accurate determination of the amount, if any, of ultimate financial injury.

Do not underestimate the seriousness of my client's demands. The unilateral action taken by Mr. Van Horn has and will continue to have adverse financial impact on U.S. Scanner Publications. It is both outrageous and irresponsible that such information could be distributed so freely with

the knowledge of the potential harm. We fully intend to proceed with all of our legal remedies
but believe it is in your best interest to publish retractions promptly. Please deliver copies of
the retractions so we may review them first to ensure they do not contain additional false
statements.

Very truly yours,

Roger A. Lenneberg

RAL/kkf
Enclosure

GRANT & LENNEBERG

==========

RE: U.S. SCANNER NEWS AND THE RCMA SCANNER JOURNAL

There is a lot of misunderstanding as to the future of the RCMA Scanner Journal. I hope this letter will clear matters up.

We intend to keep the same format, with the exception that there will be no Regional Editors only State Editors. There will be a separate section in U.S. Scanner News for The Scanner Journal.

The RCMA membership list will continue to be kept in a separate database and will not be made available to anyone, no exception. New subscribers will have the opportunity to indicate if they wish to be RCMA members so they can have an RCMA membership number or U.S. Scanner News subscribers. None of the U.S. Scanner News writers will be replaced by RCMA writers. The two publications are separate and will be treated as such. Any rumors to the contrary are just that.

Our agreement with RCMA was to honor all the outstanding subscriptions. The cost to us for including The Scanner Journal in U.S. Scanner News will be minimal since we will replace the 12 to 14 page Frequency Forum with The Journal. The cost of the additional mailing will hopefully be offset by the extra renewals we will receive.

A number of entities had expressed interest in RCMA but it was apparent that all they wanted was the mailing list. We were told we were the only ones committed to continuing The RCMA Scanner Journal in its original format.

It is our hope that the RCMA membership would like to see their magazine continued and we feel U.S. Scanner News is the best platform for this purpose. This will expose The Scanner Journal to over 9,000 new readers generating a new influx of members.

Much has been knocked around about this merger. Our intent was to continue The Scanner Journal and in time bring it back as its own magazine. To help preserve the club we asked RCMA writers to continue providing material as

before. Perhaps we were not clear enough and I hope you can now see our intentions.

Thank you for continuing to support RCMA.

Bingo! You figured it out already. Wrong diode. And you
don't move ANY. Just clip or remove D-11. Don't do
anything else to the remaining diodes or empty spots.

>for these frequencies?

Loss in coax always goes up as frequency goes up. Fer
instance, you can use RG-58 for 100-kHz through 10 MHz with
little or no loss. But you lose everything in RG-58 at UHF
frequencies.

Radio Shack has a passably decent coax for casual-to-serious
scannists who attend to details. RG-6 Satellite Cable!
It's decent stuff. Flexible. Acceptable loss figures,
provided you use the gold-plated F connectors, and install
them correctly. And the RG-6 is cheap enough to not send
you to the Salvation Army Soup Kitchen.

Belden 8214 is about the next best to 9913, but between the
cost and the rigidity and the size, it makes no sense to opt
for 8214 in lieu of 9913. So the best downward compromise
is RG-6 satellite cable, IMHO.

What you were most likely hearing was a training drill for civil
disturbance responses that was held in the parking lot at Dodger
Stadium.

The LAPD training Division has used the Dodger's parking lots many
times in the past for training purposes. Mostly, they use it for
felony traffic stop training, but they have had an in-service
training program for tactics dealing with civil disturbances sine the
1992 riots.

Hope that helps.

>I'll second that! Bill has my vote.

Thanks guys, but really.......we don't need a danged ol'
moderator. Everyone is a moderator over his own domain, and
can be more decisive and merciless than I could ever be.

And again, in these newsgroups, a "moderator" is really a
censor. All he can control is what gets posted to the
article queue.....i.e. CENSORSHIP.

Frankly, it would kill my soul to censor. I'd do it ONLY as
a last resort.

Rgds,

Bill

First thing I would check is the attenuation switch on the back. It has bit
many a person with the Pro-2xxx series. If that isn't it I would ask Bill
Cheek
for his thoughts.

>will go on line?
>
>Rick Prelinger
>footage@well.com

Is this 800 trunked system allocations?

If this is the first time they have appeared locally
in print it means that they have been allocated these
channels for future use.

The operateive phrase is "for future use"....

All this means is, if it's 800's, is that they are in
process of setting the system up, someday.

San Fran just began installing their new Motorolla "state
of the art" 800 system at a cost of around $31Million.
The allocations were given to them over two years ago.
A few more police agencies in the ARea have same...the
channels have been allocated and are in the books.

One Problem: they have to find money to pay for the
system....that is why it takes so long to get on-line and
ready to install, which can take a year or two once the
money flows....

Then there is the mandatory 6 mos. "try it-you'll like it"
scenario where the bugs are ridded from system....

payner@millcomm.com (Tim Payne) wrote:

>Ummmm, excuse me for interupting the flame war that I am somehow being blamed
>for starting, but would any of you like to read all the posts before jumping
>into the fray?

I don't see where you are blamed for starting a flame war.
And to read "all the posts" is a bit preposterous for those
on limited time. You should have been communicative and
inclusive of each and every issue of this moderation thing
in ONE POST. But you left much open to doubt and
uncertainty. I couldn't follow your trails or determine
exactly where you were coming from. Could everyone else?

> Hence, Bill and all the others, I am starting a new group!

I am glad to see that said. Thus, I have no quibble or
further input on the matter. I support "To each his own."

>Again, if you had read the charted to the moderated group,

Where is it?

> it says that the
>duty of the moderator is to make sure that all posts apply to the group topic,
>scanning. That's it. Nowhere does it say 'only approve those posts that meet
>your personal agenda'. If your post is for some reason rejected, there will
>be multiple moderators to review it if you request it, and you can go to the
>leaders of Usenet if you still feel that the post was on topic.

Mumbo-jumbo there. It is censorship, period. And few
people have the time and resources to pursue redress.
That's a form of beating around the bush, even though what
you said may be true in its purest essence. The "appeal"
process in all walks of like is fraught with negativity,
time, and often, tangible cost. People don't do it if they
can avoid it.

>Now, as far as self moderation, that is not possible. As the last 2 months
>have shown, there are many people here that simply cannot contain themselves
>for taking pot-shots at others. Read almost any thread and there is an attack
>somewhere.

So what? It goes with the turf, I guess. People are, or
should be, FREE to pick and choose what they want to read.
Choices are limited under conditions of CENSORSHIP. And
there is grave potential for abuse, as John Mackey and Hugh

Duff are so fond of elucidating.

>If there are other questions that you would like addressed, please keep it in
>e-mail. I always put my e-mail address on my posts.

Why the scurrying to e-mail over issues of widespread and
public interest? E-mail is one-to-one and is MOST
inefficient when it comes to a discussion of matters that
impact everyone.

I have nothing to hide. Not anywhere about me. No
skeletons. No closets. Let's be OPEN about matters that
pertain to many people.

>And now, maybe, back to scanning!!

Maybe.

So long as you are wanting to start a new group, and not
impact THIS one, then there will be no problem from me. I
will NOT be a part of such a group, however, and I will not
moderate it, either.

If I am asked to vote on it, my vote will be "NO!" because I
am against censorship and FOR the freedom of speech. This
is to say that I am FOR John Mackey's and Hugh Duff's right
to say what they please, even though I do not like it.

I think you and a few other people are missing the BIG point
of this forum when you quibble, snivel, moan, whine, and
gnash your teeth over the flames and attacks. Sure, they're
not fun in the purest sense.

But I *am* a scanner person, and one who has left his mark
indelibly carved into granite and basalt. Therefore, I am
subject to their innuendo and bullshit whether I like it or
not. And it *is* a scanner issue, and it *is* very much ON
TOPIC and not against the spirit of this forum.

If I were a green weenie newbie and got attacked for asking
a weird question, THAT would be against the spirit and
unwritten rules of the forum. But I am NOT a newbie, and I
have stood to be counted; paid my dues; and fought back when
I felt it appropriate. THOSE ARE scanner and scanning
issues, whether you and I like them or not.

Other major scanner personalities do NOT participate here.
A few come and go. Most stay gone. Do you ever wonder WHY?
It is VERY MUCH an issue ON TOPIC why they are not here.
Same as it is an issue that *I* am here.

Whether or not I ever write another scanner book may be in
the balance on this very forum. That IS a scanner issue.
The good, the bad, and the ugly are a part of the foundation

that will determine if I ever write another book. It might impact other writers, too.

ALL that is happening, whether we like it or not, IS very much on-topic and IS of widespread interest. This is not to demean your efforts to start a new group, but rather to highlight your REASONS and why you may be either premature or slightly off base.

More power to ya so long as it doesn't impact THIS group.

Kind regards,

Bill Cheek
Scannist Extraordinaire
(Voicing his own damn opinions)

Beyond putting thought into the strategic placement of local
oscillator and IF frequencies during the design stages,
you can't do much about the location of the mirror image 2 x I.F.
regardless of what frequency it is.

So what CAN be done ?

Quality radio equipment designers add tracking notch filters in the
front-end tuned to the mirror image frequency (ie frequency + twice

the IF...21.4 MHz) to attenuate the offending signal 60-70 db down or better.

The other thing to note is that the IF image (opposite injection frequency) is used to our advantage in many scanner designs since the mixer difference is used for one band and the difference for another using the same local oscillator. ie..PRO-2004/5/6.
So you don't necessarily want to permanently design in a high or lowpass filter (depending on whether low or highside injection is used).

Beyond putting thought into the strategic placement of local
oscillator and IF frequencies during the design stages,
you can't do much about the location of the mirror image 2 x I.F.
regardless of what frequency it is.

So what CAN be done ?

Quality radio equipment designers add tracking notch filters in the
front-end tuned to the mirror image frequency (ie frequency + twice

the IF...21.4 MHz) to attenuate the offending signal 60-70 db down or better.

The other thing to note is that the IF image (opposite injection frequency) is used to our advantage in many scanner designs since the mixer sum is used for one band and the difference for another using the same local oscillator. ie..PRO-2004/5/6.
So you don't necessarily want to permanently design in a high or lowpass filter (depending on whether low or highside injection is used).

I heard the Snowbirds using 272.100 this year for their air-to-air comms. They only use it to coordinate their movements during a performance, therefore you wouldn't hear it in use at the airport. 245.750 was inactive. 123.600 is interesting to listen to. Some of the acrobatic teams use this frequency to broadcast to the PA system for the audience at Ontario Place. As well, you hear the announcer talking back. Great if you don't have the privilege of a front row seat!

Ok, Bill, you win.

I hereby withdraw any and all statements made regarding a new group or moderating. I now realize that Bill is the way, and that all others are liars.

For those of you that felt perhaps moderation was a good thing, I'm sorry. Perhaps someday things will change for the better. I doubt it though...

And for all of those out there who think I should crawl under a rock and die, I shall. I have learned a lot from the group, and have even contributed a few things along the way (although no one will admit it). I'm sorry I ever pressed the POST button.

Goodbye and good luck!!

Shoot, 150' of Tandy RG-58 would have been darn near a perfect
dummy load and cost less.

Hint - a perfect dummy load would have a very large return loss.
For a piece of coax terminated in an infinite SWR (either shorted
or open), the return loss is twice the coax attenuation. So, if
the coax has 15dB of attenuation, it has a return loss of 30dB which
gives an SWR of about 1.06:1. Shoot, that's pretty good for a dummy
load.

DON'T JUNK THAT OLD BEARCAT BC-300

Copyright 1989 by Bob Parnass, AJ9S

[Notes: This is a reprint of an article published in the
June 1989 issue of The Radio Enthusiast and August 1989
RCMA Journal. This article may not be reproduced in whole
or in part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author.]

Although the Bearcat BC-300 scanner is no longer available,
it occupies a fond place in my collection. I exercise lit-
tle self control when I see a used BC-300 for sale cheap,
and have adopted two broken units. They make fine radios
after repair.

The BC-300 was the forerunner of today's 760XLT. It was a
50 channel feature laden scanner, introduced around 1979,
back when Bearcat was part of Electra. Retail sales of the
BC-300 continued until 1987, when it was discontinued by
Uniden.

Although Electra offered the pricey BC-350 as a step above
the BC-300, firmware bugs and a batch of bad power
transformers doomed the 350, and the 300 remained the jewel
of Bearcat line.

It's easy to see why the BC-300 model was offered for
several years. It boasted premium features like a clock, a
carrier operated solid state relay for tape recorder activa-
tion, a transmission counter, and a Service Search of 11 ROM
banks of preprogrammed channels. For memory, the BC-300
used EAROM (electronically alterable read only memory), so
backup batteries were not necessary. The Dog House, a radio
shop in Fairfax, Virginia, at one time offered the DH 1000,

a 1,000 channel adapter for the BC-300! Unfortunately for federal band listeners, the BC-300 lacked coverage of the 138-144 and 406-420 MHz bands.

While outwardly impressive, internal construction was typical of Electra hand wiring in that era -- a bit messy. BC-300 schematics show at least 100 components changed between earliest and later units. The scanner went through many circuit design changes, but rather than changing the printed circuit board, new components were tack soldered on the foil side in different positions.

Electra stamped all of its scanners with a manufacturing date code on the rear of the cabinet. The code is comprised of a single character (C = Cumberland, Indiana, P = Puerto Rico), followed by four digits denoting year and week the radio was built. For example, "P2284" denotes the radio was made in the Puerto Rico factory during the 22nd week of 1984.

Switching power supply failure was common in early units due to insufficient capacitance. Electra responded by increasing the value of capacitor C98 from 22 ufd/16 v to 47 ufd/25 v, but I recommend 47 ufd/35 v. If your display is getting abnormally dim, C98 is probably the culprit, as it was in five Bearcat scanners I fixed.

Squelch preset potentiometer R81, mounted on the radio circuit board, was misadjusted in new units, requiring readjustment after the components aged.

In one radio, I replaced Q9, a small signal PNP transistor. Its failure caused the BC-300 to become deaf on all but the UHF band. Failure of squelch gate transistor Q15 caused the squelch to remain open at all times.

Cold solder joints, especially on the wires and ribbon cable connecting the radio board to the logic board, have been responsible for other failures.

I have seen serious IC failures in three BC-300s built around 1984. These include CPU chip IC201, memory chip IC202, and IC203, not in stock at your your local Radio ShackO.

The BC-300 circuitry, especially on the radio board, is very similar to the circuitry in the the BC-220, BC-20/20, BC210XL, and BC-350, so some of the previous remarks may be applicable to these models as well.

I can neither furnish schematics nor repair your radio. If you come across a broken BC-300, obtain a schematic from Uniden and spend some time troubleshooting. If you give up,

your BC-300 can be fixed by Electronic Repair Centers in
Franklin Park, Illinois, (708)455-5105. I'm told they do
good work. The BC-300 is a classic scanner and worthy of
your efforts.

I have for sale a very clean Pro 2022 base/mobile receiver. It has 200 channels (10/20). It also has full celluar mod done and also a speed mod for search and scan (replaced xtal oscillator). Has two new front knobs, new feet, and new antenna from Tandy Natl Parts. Also comes with manual, external speaker, and AC adapter. VL/A/VH/U/8. Also has very nicely repainted case (gloss black, quality job).

$150.00 for everything COD... I'll pay shipping

If you live in the SF Bay Area I'll drive half way..

>a great scanner, except the audio output is low @ 100mW?

It has great RF ability and is more resistant to intermod than most handhelds. The downside is the scan resume will not "resume" until at *least* two seconds have passed. This makes 800 MHz trunked scanning almost useless. There is virtually no technical support available. My unit has drifted off frequency (UHF-low and below) about 5Khz to the low side while 800MHz and above has drifted to the high side. I don't have a schematic but I decided to open it up anyway and see if I could tweek something. It is easy to open and there are only two adjustments you can make without tearing the whole unit apart. It was easy to tweek the frequency back where it should be....but....when the unit is opened, ALL 1000 MEMORIES are lost. :-(

Overall, I'm pleased with it. It would be near perfect if the damn 2-second delay *feature* weren't there.

Bill,

Just program the frequency you want to listen to. The scanner will change
it to the closest frequency it can receive (only 2.5 kHz away). You will
hear absolutely no difference in reception quality.

Dave

3523. BC3000XLT Manual

Newsgroup: rec.radio.scanner
Date: 1996-09-03 00:00:00 UTC
From: mikenet@access.usa.net
Message-ID: <50ioop$nho@earth.usa.net>
Source record: 224434

I recently bought my first scanner, a BC3000XLT, and have found a couple of things in the manual that aren't explained clearly. This may help other first time owners.

1) Manual Programming (pages 10 and 11). The example frequency it shows to enter is 460.150. However if you try to enter"460150" it won't work. What you have to do is enter "460" then press the "SFT" key and then enter "150". You can also do this when entering upper and lower frequencies for a search.

2) Unlocking All Channels after doing a search (page 31). While doing a search you may lock out several frequencies and then want to unlock all of them after the search. The manual says to stop the search by pressing the "SRC" key and then press "L/O" for 2 seconds. What I've found is that you need to press the "HLD" or "LMT" key to stop the search and then the "L/O" key for 2 seconds.

As I said this is my first scanner so please let me know if I am giving out bad information.

Mike

Could someone explain virtual down conversion to me,
I have a pro 26 and understand this process can be done to my unit
but not sure what it does!
thanks....Gary

3527. Legal and ethical restrictions on freq postings

Newsgroup: rec.radio.scanner
Date: 1996-09-03 00:00:00 UTC
From: n9jig@TheRamp.net
Message-ID: <n9jig-0309962352320001@news.TheRamp.net>
Source record: 224438

It is perfectly legal to post frequencies that are illegal to listen to, such as cellular (BTW, cellular freqs range from about 869 thru 894 MHz, with the inputs 45 MHz below). Knowledge of how to committ an illegal act such as listening to cellular radio is not illegal. I also know how to shoot someone, steal his car, or burn his house down, but I can not be arrested for that knowledge.

While I am distressed that we have lost the right to monitor in our own homes radio signals that are beamed in uninvited, I enjoy knowing that ECPA violations are rarely (if at all) prosecuted, and probably wouldn't get very far.

AS far as ethics, that is up to you. Would I post surveilance freqs, or others that may be sensitive? In my books, I don't publish unlicensed freqs that an agency has asked to remain secret. With the easily programmable radios that are out there now, these are so changable, that by the time the books get to the publisher, they can change the freqs a dozen times. The decision should be on a case by case basis.

Actually it's 100 "channels" on an Escort.

> know someone who does, these are the best prices I've seen.

I would NOT recommend the Escort based on my experience with the 9600
that I have had for about 8 months.

The Escort uses direct sequence spread spectrum. Despite what the
proponents of direct sequence will say, it is much more suseptable to
annoying interference than most frequency hopping spread spectrum
devices. In fact, I have two frequency hopping devices in the house
with my Escort, a Ricochet wireless modem and my room mates phone. When
both of those devices are on the air, my Escort DSSS phone is
practically unusable.

This was not always the case. When I first got the phone last winter it
worked great. The range was excellent. I could walk several hundred
feet from house and maintain calls. The range is now about half that.
I can only attribute this to my theory that more and more 900 MHz
devices are making their way into my neighborhood and "raising the noise
floor".

The Escort 9600 DSSS phone does have better sound quality than any of
the FHSS phones I tried - however sound quality doesn't mean squat when
your handset can't sync up to the base unit.

As far as which phone is more secure... Freq hopping and direct
sequence are both very secure form any type of casual monitoring.

The Escort phone has, essentially, two layers of coding. Your voice is
digitized to a 64 kbs stream (PCM), then convolved with a 32 bit "PN
code" that is unique to the base/handset. So any one that wanted to
eavesdrop would have to be able to crack the 32 bit PN code (on a wide
band receiver since the radio signal from an Escort is about 5 Mhz
wide), run it through a correlator, then decode the PCM (which I think
is also encrypted - remeber that encrypting the digital portion of a

analog-to-digital-to-analog process is really pretty easy so I wouldn't put it past CNMW to have it)

Freq hoppers are required to use at least 50 channels in there hop list. They also digitize your voice (usually into a 64 kbs PCM or 32 kbs ADPCM) which could be easily encrypted. That signal is sent over a radio system that is continuously changing "channels" during the call. The requirement for a 900 Mhz freq hopping phone is that they must use at least 50 different "center frequency channels" in the hop list. Freq hoppers stay on one center freq channel for no more that 400 milliseconds at a time. Each channel can be up to 500 Khz wide (20dB bandwidth). The base and handset sync up on a unique hopping sequence.

Both are VERY secure. Your neighbor will not be able to listen to your calls... unless your neighbor is with the CIA or something...then it really doesn't matter if you have a cordless or not, now does it? ;)

Regards

9913 WAS some of the best low loss cable at a reasonable price a few years back. However it was surpassed by Times Microwave LMR-400 a couple years ago. 9913 by its mechanical features has a few serious flaws that surface with age, the most obvious is moisture accumualtion. This happens from the heating and cooling of the cable, the dialectric is partialy air, recalling basic science you will remember water is a part of. Over the years you WILL have water accumulation, no matter how much tape or goo or anything else you try less pressurization of the cable. Other mechanical problems are in the bending of the cable, the loss factors are based on STRAIGHT cable not one with bends.
I can go on, however I suggest a serious look at the LMR family of cable.
Airtouch Cellular along with other carriers have begun to use LMR style cable for monoploles and other stuctures that require tight turning radius with loss levels similiar to Andrew LDF6 or LDF7.

They claim it is a secure phone with "65000 digital codes"...but in
reality, anyone with a 900Mhz scanner can pick up the signal. (it is not
spread spectrum).

==========

IT'S ABOUT TIME !! WINRADIO IS HERE - OH YES !

Rosetta Laboratories of Victoria, Australia (of all places!) throws their hat into the ring of olympic scanning with WINRADIO, the first all-band receiver-scanner on a PC card for the hobbyist!

Television on a PC-card has been old-hat for a couple of years now, but WinRadio is the first serious PC receiver I've seen, and is it ever hot stuff!

And just in the nick of time, too, I might add. WinRadio offers a whole new approach to scanning and monitoring that promises to lend a real infusion of life to the wallowing, floundering hobby radio scene. And does it ever do it in style, too! WinRadio is cool. But enough of the blubbering and slobbering for a minute. Let's get down and dirty and see what WinRadio is really all about.

WinRadio is a world-caliber radio on a standard AT card that plugs into an expansion slot on an IBM-PC/compatible computer with 386 or higher processor. Operating system requirements are MS-DOS 3.3 or higher or Windows 3.1 or higher, including Windows 95.

A minimum of 640-k RAM is required for DOS, but 4-Mb is minimum for any Windows environment. Your computer must have a vacant 16-bit slot and you have to supply your own plug-in speaker or headphones. This completes the mandatory requirements.

Now let's talk specs in plain English. WinRadio covers 500 kHZ to 1300 Mhz continuously except in some countries where certain bands may be omitted in order to comply with government regs. For the USA, that means the cellular bands are not available. At this writing, I don't know if a cellular hack is possible, but I will try to find out.

Tuning Steps are user selectable from 1 kHz to 1 MHz, and a BFO is provided to enhance tuning of SSB or CW signals in +/-5 Hz increments.

Four modes are available: AM, NFM, WFM, and SSB/CW

Rated sensitivity is 1-mV (nominal). Audio output is 200-mW into an 8-ohm load. The board is about 11.5"L by 4.5"W. Thickness, including the shielded radio compartment is 18mm or 0.71".

Weight of the WinRadio card is 565 grams, and I'm here to tell you it's a hunk! Heavier than any PC card you ever stuck in a computer! I'd submit it to be about like a handheld scanner, though. Despite its weight, WinRadio is very secure in its slot after the hold-down screw is tightened. At first, I was a little concerned, but not anymore, and mine was installed in a tower case where the card is horizontal. It would be even more secure in the common desktop case where it would reside in the vertical position. Basically, the specs and physics of WinRadio are sound and there are no glaring showstoppers to merit the jaundiced eye. The rest of this article covers it all; the good, the bad, the ugly, and the beautiful.

INSTALLATION & SETUP

WinRadio is a snap to install and set up. The nearly 3/4" thickness of the board calls out and begs for an empty slot to be adjacent to it on the component side of the board. My computers never have empty slots, though, so I installed mine in Slot 1, closest to the RAM and power supply. If you don't have a choice, you can slip a thin cardboard or a couple thicknesses of plain paper between it and the adjacent card in order to avoid shorts.

THE WINRADIO PC CARD

Setup consists of an easy software installation and one, count `em, one jumper on the card. There are eight jumper positions, the default one of which is likely to work fine

for you, but if not, it's easy to make a change and try again. This jumper setting is for the port address of the card, the selectable range of which is 0180h through 01B8h.

SIMPLE SOFT / HARDWARE SETUP

There are only two external jacks on the metal mounting strip of the WinRadio card: a BNC jack for the antenna and a phone jack for the external speaker.

Speaking of which, one of the worst downsides of WinRadio is the need for an external speaker, preferably the amplified kind, since the stock 200-mW output is about like that of a handheld scanner. It's petty weak and won't drive a speaker very loud. Radio Shack's #21-541 or #32-2040 are good amplified speakers for this purpose. This "wart" (low speaker volume) is understandable and tolerable because you don't want to pull any more power from the PC than necessary. If your PC has a Soundblaster or other sound card, you can patch the WinRadio audio out to the LINE-IN jack on the sound card. Otherwise, use headphones, or an efficient or amplified speaker.

SOFTWARE CONTROLLED

WinRadio is, of course, controlled by software, of which you get a version for MS-DOS and one for Windows. I hadn't tested the DOS version by this first report, but the Windows control program is slick , wicked, and a real beauty!

The Windows radio graphic appears full screen on the monitor after WinRadio has been fired up. In other words, you're sitting in front of a "virtual" radio. Physical control is as follows:

1. Mouse point & click, or

2. Keyboard commands, hotkeys, or

3. Various means of automation or semi-automation.

Almost every area of the above graphic that appears on your screen is active, either as a control or as an indicator. These areas are sensitive to context HELP, both as "Quick Tips" when the mouse cursor pauses on a control or an indicator, as well as context F1 help. For quick help on a particular panel feature, press Shift+F1 and click on the feature.

Basically WinRadio works and is controlled like any radio, except that you're in front of a monitor screen instead of a metal front panel with physical controls. Now for the business end of WinRadio.

NOISE AND BIRDIES

Computers are notoriously noisy and counterproductive to good radioing. Odd, but I don't see any real pronounced problems here - none that aren't in an ordinary radio. Birdies aren't all that profuse and computer noise seems to be eliminated or reduced to very tolerable levels. My testing is very tentative at this point, but I think that birdies and noise from the computer are not reasons enough to avoid buying a WinRadio.

MECHANICS AND PHYSICS

WinRadio comes on a 3/4 form factor plug-in AT expansion card about 1-1/2"-2" shorter than the maximum length of a full-size card, and is just under an inch (23mm) higher than the hold-down screw hole on the back panel. The height is probably max, but overall, the WinRadio card should fit comfortably in any standard tower or desktop computer case.

The 11.5" length of the 16-bit WinRadio card means that it will not fit into some expansion slots. Certain older PC's have one or more short 8-bit slots that will not accept WinRadio, period.

The above drawing of a PC card shows the general idea of 8-bit and 16-bit ISA cards and the tolerable size limits. The opening of an 8-bit slot is 80-mm long, much shorter than a 16-bit slot. WinRadio requires a 16-bit slot, period.

Now don't be confused by other types of slots, including VLB, PCI, and EISA. Regular 8 and 16-bit cards will fit and work fine in VLB and EISA slots, as well as the conventional ISA slots. The only slots that can't accept WinRadio are 8-bit ISA slots and all PCI slots.

There is another physical constraint that you need to consider. WinRadio is a "thick" card that takes up just about all the available space that exists between standard cards. There is a chance that the WinRadio card could short against the back side of an adjacent card. Be aware of this, even though the surface of the WinRadio compartment appears to have an insulated layer. Ideally. WinRadio will be installed next to an empty slot, or in Slot #1 so that this can't be a problem. If you can't use Slot #1 and have just one spare slot, don't worry. Just be aware and solve any problems in advance.

The WinRadio card is shorter than the maximum allowable, but it is long enough to overlay and touch the CPU, which is adjacent to the ends of a couple of slots in many computers. The problem is compounded if the CPU has a heat-sink and/or fan. This is to warn that WinRadio might not fit in those one or two slots. Also, in one of my Pentium computers, a

pair of RAM SIMM chips are located near the ends of two slots. These SIMMs protrude high enough that could prevent WinRadio from being installed there. I didn't try, but words to the wise. This information is to enable you to plan and allow for potential showstoppers.

ELECTRICS & ELECTRONICS

Ironic, but I can't tell you much about the electronics of WinRadio just yet. Maybe by next issue. I know that WinRadio uses triple conversion with IF AGC, bandpass filters and a doubly-balanced mixer to round out a pretty darned nice receiver. My observations thus far don't disclose any glaring performance deficiencies, either.

Rosetta Laboratories says that service manuals are not available for two reasons: (1) service is never done in the field (units are replaced if and when there is a problem), and (2) the design of WinRadio is proprietary, and there is a concern that foreign manufacturers may plagiarize the design if schematics and normal service data were available.

HACKABILITY ???

For reasons that I don't wish to disclose at this time, I think WinRadio may prove to be very "hackable" in terms of adding some of the more esoteric features we have come to love and demand. I am confident that key access points can be found; points such as AGC, FM discriminator outputs; AM detector output, and maybe....just maybe the address/program lines of the CPU. Maybe more....maybe lots more. For now, we have to deal with WinRadio as it stands on its existing merits. Let's go!

PRELIMINARY OPERATIONS

WinRadio, under Windows, (3.1 or 95), multitasks very well! That means after starting a session, you can minimize or "window" the operating screen (running program), and go on about other work. WinRadio goes on with its business, requiring little or no attention. There are three user selectable screen sizes, large, medium, and small, to fit just about any preferred "window"! Here is the initial setup and control panel:

I won't bother to explain the obvious, but a few comments are in order. On the above screen, you see a setting for "Frequency Display Offset". This is cool! Suppose you use a down-converter to receive bands not within WinRadio's capability, like satellite or, heaven forbid, cellular. This setting permits calibration of the main display to show the actual frequency being received; not the receiver frequency. A very nice flourish!

The next two settings have to do with the main power switch status when WinRadio is fired up or shut down. These setting are a nice touch since the power "switch" actually disengages power to WinRadio. Not just for looks! The rest of that screen is self-explanatory.

Next we have a panel from which to control the display of time and date. Nothing unusual, just good design!

Now let's look at some real meat `n taters. The next dialog box allows you to set up and configure the Auto-Stepping function. You can configure the step size for many ranges of frequencies, including the default mode to set the receiver.

For example, say you configured two auto-step ranges, one for AM broadcast from 530 kHz to 1620 kHz with a step size of 10 kHz and the AM mode and the other range for the FM broadcast band from 88 MHz to 108 MHz with a 100 kHz step size, setting the FM-W mode.

If you are tuned to 144 MHz (2m ham band) in FM-N, the step size will remain the same as set for fixed stepping. If you now type in 1500k, you will see the step size automatically change to 10 kHz, and the mode will reset to AM. If you step outside the range, the step size will be set for the new range you entered. If no range is specified for the new frequency, WinRadio i will default to the fixed step size.

You can also configure auto-stepping to skip frequency ranges that are not specified. If, using the example setup, and step above 1600 kHz in the AM broadcast section, WinRadio will automatically jump to 88 MHz setting FM-W and a 100 kHz step size.

Note: If you are at the lowest or highest range specified, and tuned to the lowest or highest frequency in that range respectively, you cannot step lower or higher if you have the "skip specified ranges" option set. If you manually type a frequency in a non-specified range, WinRadio will try to step to a specified range. If no range is specified in the direction you are stepping, the frequency will not change.

Next, we have the Memory Recall panel - much like a database viewer. Only a few frequencies are shown here, but 1000 per memory files are possible.

The memory recall dialog box allows you to recall a frequency from a list of all available frequencies, search for a frequency, edit and delete frequencies.

There are a number of ways to recall a frequency into
the display:

+ Use the memory recall/view dialog box
+ Type a number in the memory number display
+ Type a number while holding the control key
+ Use a hot-key
+ Memory stepping
+ Use the 300,000 frequency WinRadio Database

To recall a frequency from memory, either click the R
button or press the R key on the keyboard. A dialog box
will pop up, showing all stored frequencies, including mode,
call-sign and comment.

To type a number directly in the memory number display,
either click in it with the mouse button, or press Ctrl+M.
Type a number between 0 and 999, and press <Enter>. If a
frequency exists at that number, it will be recalled. After
a little practice, you get real good at this!

The quickest way to recall any frequency is to type the
memory number in directly, while holding down the Control
key. For example, you want to recall memory number 367,
just hold the control key down, type 367, then release the
control key. (CTRL+367)

A hotkey can be assigned to a frequency (selected from a
list of available ones). To use it, simply press the
function key, and the frequency associated with the function
key will be instantly recalled!

One other way to recall a frequency, is to use memory
stepping. When in memory stepping mode, simply step to the
frequency you want to tune into.

Editing memory is very similar to storing a frequency
into memory, except you cannot change the memory number. To
edit memory, you have to initially recall a frequency from
memory by clicking on the R button or pressing the R key.
Next select the item you want to edit, and click on the
Edit... button. When finished editing, click on Ok. To get
back to the station you were listening to, click on
Previous. You can also modify a series of memory entries by
clicking on the Next button.

Rosetta Labs offers an optional WinRadio World Station
Database Manager and database of worldwide frequencies that
can also be used to tune WinRadio instantly to a desired
station! More on this great database next issue.

BASIC OPERATIONS

The most fundamental operating mode of WinRadio is, what else, scanning. There are many ways to scan, some of which we are accustomed to calling SEARCH. I don't think we will be using the term, search, all that often with WinRadio. Scan is much more relevant, though the effect may well be the same. It's just that Searches are so easy to set up and use with WinRadio in contrast to scanners. Bear with me as I use the terms inter-changeably and alternatively.

Immediate Scanning mode most closely resembles "Direct Search" in the scanners we know. This is the simplest scanning method. Click on either the Scan Up or Scan Down buttons, or press [or], and WinRadio mmediately starts scanning from the current frequency. This scanning mode uses the current stepping mode too, so it can also double as a simple memory scanner. Note that if your stepping mode is set to Memory step and the memory contains no frequencies, no scanning will take place.

Memory scanning is the scan mode with which you are probably most familiar. Memory Scanning provides an extension to immediate scanning in Memory Step mode. In addition to the basic stepping through the memory frequencies, it allows you to specify a subset of memory frequencies to scan by selecting a range of memory numbers, modes and a group. Click on the Scan button to start scanning, or click on the Close button to exit the dialog box (your settings will be remembered). When the scanner reaches the end of the memory range, it loops back and starts the range again.

A feature provided with memory scanning allows you to assign priority memory number. When this is used, every second memory number scanned is the priority memory number.

Then, we have "Frequency Range Scanning", a mode much like Limit Search in scanners as you know them. Frequency Range Scanning offers an extension to immediate scanning in Fixed Step mode. It allows you to specify a number of ranges of frequencies to scan. You can enter the start and end frequencies and the step size for the scan. You can also add this range to a list from which you can pick the ranges you want to scan at a later date.

The Frequency Range Scan dialog box allows you to scan a range (or several ranges) of specified frequencies. It also allows you to write frequencies into memory. Click on the Scan button to start scanning, or click on Close button to exit the dialog box (it will remember your settings and ranges).

When scanning in this mode, and the scanner reaches the end of the current range, it either goes to the next range

selected, or loops back to the start of the first range selected. In the above example, only the 400-420 MHz range has been selected.

The range list allows you to add and remove ranges, and you can click on one or more ranges to select them for scanning. If no ranges are selected in the list, the range specified in the entry panel on the left will apply.

Range scanning also allows you to automatically store frequencies in the memory. To use this feature, enable AutoStore, and specify the first and last memory numbers you want to store frequencies in. Select Confirm Writing if you wish to be prompted before a frequency is stored into the memory.

Manually entering a frequency - If you know what frequency you want to tune into, simply type the frequency in! For example, if you want to tune into 144.30 MHz, type 144.3M. To select different frequency units (kHz, MHz and GHz), type K, M or G respectively, while entering a frequency. You can also use the mouse to select all or part of the current frequency in the frequency display, and then edit the frequency.

Stepping - Three methods of stepping among frequencies are provided: Fixed, Auto, and Memory Stepping. To select a stepping method, press the Select button in the Stepping group until the desired stepping method is shown. You can also press the T key to the same effect.

To step through frequencies, press the Page Up or Page Down keys to step up and down respectively. The effect of these keys will depend on the stepping method selected and the setup for that method. You can also use the mouse and click on the up and down arrow buttons next to the frequency display.

Other methods of stepping through frequencies can be achieved by using the Fine tuning control and the Duplex Separation.

Duplex separation provides a quick way to switch between the transmit and receive frequencies belonging to a two-way transmission. The duplex separation can be specified up to 100 MHz. To step up or down using the duplex separation, press the Home or End keys respectively. Enter the frequency separation in the box provided (shown below) and click on OK to accept it.

CONTROLS AND DISPLAYS

The major controls and displays in WinRadio include:

Receiver Frequency display - consists of the digital frequency display and an analog scale below. To set the frequency, simply type a number in or, using the mouse, click on the display and edit the number. The value shown in the frequency display is affected by the frequency display offset set in the General options dialog box (selected from the Configure menu). This offset is added to the actual receiver frequency and shown in the display. The frequency offset can be used if you use a down-converter for very high frequencies (such as satellite transmissions) not normally covered by WinRadio.

Just below the frequency display is an analog frequency scale. The tuned frequency is shown like on a classic communications receiver. You can zoom in or out on a frequency using the left or right arrows, located to the right of the scale. Next to the frequency display are the stepping buttons.

Fine Tune control - Click on the knob with either the left or right mouse buttons to adjust the tuned frequency in the smallest practical increments. In all modes except FM-W, the increment is 1kHz, while in FM-W it is 10kHz.To use it from the keyboard, use the Up and Down cursor keys. To speed up the tuning, hold down the Shift key for a 10x speed up, or the Ctrl key for a 100x speed up. This works with both keyboard and mouse.

Stepping display - varies according to the stepping method selected. There are three possible methods: fixed step, auto-step and memory step. To change the stepping method, use the Select button. When Fixed Step is selected, the display shows the step size in kHz. To change the step size, you can either click on the display with the mouse and edit the step size, or press the F key and enter a new step size.

When Auto-Step is selected, the display shows the current step size according to the auto-step configuration. If you are tuned within a defined auto-step range, you wont be able to change the step size by clicking on the display. You will still be able to edit the number, but this will only change the fixed step size - after you press Enter, the display will revert to the original defined step size.

When Memory Step is selected, the display shows the callsign for the current memory frequency that the receiver is tuned to. In this mode, the display cannot be edited. If the receiver isn't tuned to a memory frequency, the display is blank (and so is the memory display). To change the frequency using the step size, use the Page Up/Down buttons.

Memory display - The memory display shows the memory number that the receiver is tuned to. If the receiver isn't tuned to a memory frequency, the display is blank.

The display can be used to recall a frequency. Simply click on the display or press Ctrl+M, and type the memory number to want to recall. If the memory entry contains a setting, the settings will be recalled, otherwise nothing happens and the display is blanked.

When you are using memory stepping, the call-sign of the memory entry is shown in the stepping display.

BFO Offset display - The BFO Offset is used when tuning into SSB mode. It can be set from -3000Hz to +3000Hz in 5Hz increments. To change the BFO offset, you can press Ctrl+B and type in the new BFO offset. You can also adjust it by using the numeric keypads + and - keys (which can also be swapped in the General Options dialog box). To quickly set it to zero, either click on the reset button under the display or press the asterisk key on the numeric keypad.

Using the mouse, you can click on the up/down buttons to the right of the BFO offset display, or use the slider button located in between the up/down buttons.

Sensitivity controls - If a signal is too strong (causing overloading and distortion), click on the Local button with the mouse, or press the L key to reduce the sensitivity. For the highest sensitivity, click on the DX button or press the D key.

Volume control - The volume control, consisting of the volume display and adjustment buttons on the middle-right side of the panel, controls the audio volume coming out of the speaker jack on the back of the WinRadio card. There are several methods to set the volume to a desired level:

From the keyboard, type V and enter the volume number from 0 to 31; or use the Left and Right arrow keys to decrease and increase the volume respectively.

Click the mouse in the volume display and enter the number; or use the up/down buttons to the right of the display. Click on the up arrow to increase the volume and the down arrow to decrease the volume. Use the slider button located in between the up/down buttons to quickly set the volume.

The Mute Control quickly silences the audio output. It's easier than setting the volume to zero, and doesn't change the actual volume setting. To use the mute control, simply click on the button, or press Ctrl+U.

Squelch control - is used to mute the audio output when the received radio signal strength is too low. Squelch is always active, even when scanning. Squelch only activates if the signal strength remains below the squelch value for the time specified in the Squelch delay in the General options dialog box. When the signal strength increases above the squelch value, audio is immediately restored.

To adjust the squelch control, first tune to a frequency that produces only noise. Increase the squelch until the green Sqlch light at the bottom of the panel goes red. You can change it at anytime to suit conditions.

To enter the squelch value, press the Q key and enter a value between 0 and 100. Using the mouse, click on the up/down arrow buttons to the right of the display, or use the slider button, located in between the up/down buttons, to quickly set the squelch.

Power switch - The power switch, located at the bottom-right corner of the panel, labelled On/Off controls the radio receivers power. When the receiver is off, all controls are disabled (except the power switch). From the keyboard, Ctrl+O switches power on & off.

Signal strength indicator - The S-meter, located below the volume, squelch and mute buttons, shows the relative strength of the received radio signal. Full scale is equivalent to 100, and the value is used for squelch control and the scanning threshold. You can see the numerical value of the signal strength when you click on the Setup button. This value roughly corresponds to dB (decibels).

Miscellaneous indicators - There are three indicators located at the bottom-right area of the panel. These include the Sqlch (squelch), PLL (Phase Lock Loop) and Power.

The Sqlch indicator shows whether the squelch is active or not. If it is green, the signal strength is above the squelch value, and the audio output is not muted. If it is red, the signal strength is less than the squelch value, and the audio output is either about to be muted (with a delay set in the general options) or is muted.

The PLL indicator displays the status of the Phase Locked Loop. The PLL is the heart of the frequency synthesizer of the WinRadio receiver. If green, the PLL is functioning normally. If red, then the PLL is not tuned to the specified frequency, and usually indicates a hardware problem.

The Power indicator indicates whether power is on or off.

World Time and Local Time displays - located at the bottom-left corner of the panel, indicate the current time and date. The leftmost World Time display shows the UTC (Universal Coordinated Time), also known as GMT (Greenwich Meridian Time), which is the time standard used for long-distance radio communications around the world. The Local Time display is provided for convenience.

The format of the date and time is configured from the Windows Control Panel and also, to a lesser degree, from the WinRadio Configure Date and Time dialog box. The time zone you are in can also be configured in the date and time dialog box.

SUMMARY OF WINRADIO

I'll review WinRadio's performance and fine points in the next issue. My tentative judgment until then is that there are no showstoppers or glaring performance issues, all things considered. Clearly, there is room for improvement, like for instance, WinRadio desperately needs at least two BNC antenna jacks with an internal automatic switch to select between A and B, with A for 500 kHz to 30 MHz and B for 30 MHz to 1300 MHz.

On the other hand, what affordable radio has this feature? WinRadio needs a user-accessible output interface like for auto-tape recording, spectrum displays, CTCSS tone decoding, and other useful things. Fortunately, I think WinRadio will prove to be very "hackable" to this extent, and so many of its shortcomings may only be temporary. In a word, I like WinRadio

PRICE

I am told the LIST retail price of WinRadio is $699.00, but I think the US distributors have it out for $649.00

Have an ATT 9100, 900 Mhz cordless phone. Sold at Service
Merchandise or Sam's under $200. When I tried to listen in on the Icom
R7000 all I could get was a very small S meter reading that would not
even break the squelch !(tried all Modes) With the squelch turned down I
could hear a small rushing sound in the background spread out over 15-20
Khz. Base and handset where in the room with me.
Coverage of this phone at this location is around 1500 ft. Raising
the base antenna or connecting an external antenna should produce even
greater range.
Battery life is around 4 hours. This phone has a much larger
battery than a standard 46/49 mhz phone. I would guess that spread
spectrum and extended range takes more current. Audio quality is
excellent plus there is no interference from electrical devices that
usually affect the 46/49 mhz phones.
This is really a nice phone. Just don't tell my neighbors - it
might get too dull around here if they all had spread spectrum 900 Mhz
phones.

Gary

I can repost them too John, I made copies. The FBI office in Seattle also
has copies, you can also contact them. Shall I repost the messages
from you admitting you have a drug and drinking problem? I saw them
on the net so they must be true, right?

It is amazing what lengths you will go to trying to cause trouble John.
Well maybe not for those of us that have watched your antics in the
past eight months or so. You've developed quite a bad reputation on
the radio newsgroups.

I am still waiting for you to explain the error in your statement;

"Your ISP told me they were going to restrict your access after you made
so much trouble AND were soliciting for young gay boys on rec.radio.swap."

The forged post happened long after you talked to my ISP and I agreed to
there request to ignore you. Lie you way out of that one John. I am sure
with your skill at creative truth fabrication you can come up with
something.
You always do no matter how outrageous it sounds. First you said maybe you
were
wrong, then you said my ISP lied to you (yea right). What is your next
excuse (lie) for the chronological error you made in the statement above??

Better yet John, why not just pass on some of your technical expertise to
this
group? You brag about your great skills, licenses, certification and such
one would
expect you would have plenty to contribute. A review of your last 8 months

postings seem to show only flames and insults coming from you. Go figure.

Glenn

The RG58 would be my first guess as to the problem though not because
of the kind of coax it is because of the short run. It should still work
better
than the whip. Sounds to me that the cable either has a short
in it or a open section. If you have a VOM check it for continuity.
Main culprits are the connectors. Good luck.

3543. LAPD Strike Teams ?

Newsgroup: rec.radio.scanner
Date: 1996-09-03 00:00:00 UTC
From: hh357@aol.com
Message-ID: <50glnv$j23@newsbf02.news.aol.com>
Source record: 224454

Some kind of disturbance occured last Sunday, outside of Dodger stadium at about 2 in the afternoon as I recall. Some supervisor (W unit?) came on the air and wanted dozens of units, with helmets, batons and shotguns to amass at an intersection outside the park. It was all very exciting to listen to for about a half hour, just him Frantically requesting help for "only 40 minutes or so.."

The only conclusion I could come to was a potential gang fight or some type of political disturbance, and that the shotguns were to show they meant business.
Nothing else happened, and as usual, it wasn't on the news.

My question regards his request. He asked for a Mobile Field Force to be setup, which I have heard before, but he also asked that the units arrive in "Strike Team Formation".

What is a Strike Team at the LAPD and what is a S.T. Formation.

cheers

Given that 9913 is the best coax to use, what is the next best? My
interests are 400 and 800mHz. Does Radio Shack make a decent coax
for these frequencies?

Thanks for the input.

Jim..

Moderator? Absolutely not! We don't NEED a moderator here. I'd rather

flip through and/or filter out all the nonsense here in the interest of
getting timely, uncensored information on this newsgroup.

But if the powers-that-be decide that we simply MUST have a moderator, my

vote goes to Bill Cheek. It's a no-brainer, really. The man has done
more to advance the scanning hobby than everyone else put together.

The RCMP here in Saskatchewan (Canada) have just recently changed to a Central dispatch system. If there are any other Sask. scanner buffs out there that may have the most recent list of their "10 Codes", I'd sure like to hear from you. I have an older list, but doesn't always match what I'm hearing now.
RCMP appear to be using the same freqs that they have been using for years here in Sask. However, I have heard some transmissions on "Fleetnet", & assume that they will soon be changing over completely.
Any comments or ideas re: this changeover?

TIA

Brusletto <bruslet@rof.net> wrote:

>What is a frequency counter for?

Condensed version:

Used to indicate the frequency (cycles per second) of an AC signal.

Commonly used as test and alignment instruments used to calibrate
oscillators and other circuitry that generate an AF or RF signal.
Can be used to test the 60 or 400 Hz on a power line.
Also used as a signal detection device when incorporated with a
sensitive amplifier, can pick out radio signals from the airwaves and
indicate the frequency...ie, standing in the near RF field of a Taxi
or Police car while they are transmitting.

From: pauls@faribault.polaristel.net
Message-ID: <50haj1$mjj@cronkite.polaristel.net>
Source record: 224471

I own a six year-old Realistic Pro-2006 scanner. The diode has been clipped to restore cellular (although of course I NEVER listen to cellular or other private communications in violation of the ECPA).

Recently the scanner seems somewhat less sensitive. Is this atmospheric or should I send the radio to the Service Center to be tuned and tweaked? Are there components inside the radio which might have fatigued over the course of six years (capacitors which may have started to go sour, etc.?) I have taken very good care of the scanner; it has never been subjected to either climatic or electrical (i.e. lightning) extremes. Any ideas?

Thanks,

Paul

Well, around the Midwest (which by the way produces more national news commentators, etc. than any other U.S. Region) we pronounce it

DIS-kone.

"Dis-KOH-nee" is the famous Italian dancer from the late-1970's, known for his lime-green leisure suit and purple platform shoes. Only rivaled by John Travolta in sheer disco-power......

Seriously, the antenna gets its name from its two patterns; the "disk" formed by the top elements, and the "cone" formed by the downward diagonal elements.

Even here in the rural Midwest, many police departments are converting to 800-MHz trunked communications, etc. Of even greater concern to the "watchful" citizen is the increasing use of MDTs. (mobile data terminals) and DES (Digital Encryption systems).

Does anyone know of any computer-related product or stand-alone that will let me decipher MDT communications? In a related question, has anybody reliably "cracked" DES yet?

I ask these questions as a concerned, law- abiding citizen who feels that we all have the RIGHT to monitor the public servants we pay to help keep us safe. Unsupervised power quickly becomes corrupt power... and aside from the hobby fun to be had scanning, I believe it's a civic duty to keep tabs on our law- enforcement people (of course, most cops and Feds will heartily disagree).

Expert advice, please. Bob Grove, Bill Cheek, the guys at Tiare.... are you reading me?

Ummmm, excuse me for interupting the flame war that I am somehow being blamed for starting, but would any of you like to read all the posts before jumping into the fray?

In addition to my request to help pick a moderator for REC.RADIO.SCANNER.MODERATED, I also posted the RFD for several new sub topics of REC.RADIO.SCANNER. If any of you that are screaming 'START YOUR OWN MODERATED GROUP!' had bothered to read it, you would know that the moderated group would be in addition to REC.RADIO.SCANNER. Hence, Bill and all the others, I am starting a new group!

Again, if you had read the charted to the moderated group, it says that the duty of the moderator is to make sure that all posts apply to the group topic, scanning. That's it. Nowhere does it say 'only approve those posts that meet your personal agenda'. If your post is for some reason rejected, there will be multiple moderators to review it if you request it, and you can go to the leaders of Usenet if you still feel that the post was on topic.

Now, I simply posted asking for moderators because I think there are people out there with more time and expertise at it than me (hence, I am not trying to be a dictator!). I wanted the choice for moderator to be a group decision, but that obviously cannot occur due to the vocal minority.

I do not now, nor have I ever, said that I know more than anyone else here. Nor have I ever blasted anyone for being new to the hobby. I am just the average hobbyist that tries to gain as much knowledge as possible by reading and doing. This was a good forum for that. It may be again. Time will tell.

The moderator(s) for the group needs a basic knowledge of the scanning hobby, but nothing more. This is not rocket science!! It requires the ability to read the post and decide if it is on or off topic. Nothing more.

Now, as far as self moderation, that is not possible. As the last 2 months have shown, there are many people here that simply cannot contain themselves for taking pot-shots at others. Read almost any thread and there is an attack somewhere.

If there are other questions that you would like addressed, please keep it in e-mail. I always put my e-mail address on my posts.

And now, maybe, back to scanning!!

> Camelot@castlegate.net

John, e-mail the date code on the back of the BC-890 to me. As far as the AR8000, once unblocked with software, it is permanently unblocked, even without software control (as opposed to the OS-535 which needs the unblock code from the software each time.)

Contact the Scancat Gold people at:

http://www.scancat.com/

for software and an interface. Alternatively, Grove will do the mod for you:

http://www.grove.net/

Good luck!

>Police for central Jersey) and Troop "E" (Garden State Parkway).

Eric,

The turnpike state police communications is on the statewide trunked radio system. The old 150's freqs are no longer used for dispatch. Troop C (Central) carries the area you are looking for - Which is the New Brunswick (Now Cranbury) station. The NJSP built a new turnpike law enforcement communications building in Cranbury a few miles south of New Brunswick. Actually you can hear all 3 turnpike stations on Troop C since they are simulcast on the Type II side.

See my home page under New Jersey State at the following url:

http://www.voicenet.com/~jcardani/sjscan.htm

You will find all of the frequencies (they just added several more - Troop A has 12 and Troop C has 14). Also I have the latest Type I fleet/subfleet assignments and the newer Type II talkgroups for Troops A (South) and troop C (Central).

I believe that the turnpike comms are only transmitted from the western towers (those closest to the turnpike). If you live close to the shore, you may not receive the signals. And the Parkway comms are vice-versa. You would not be able to pick up Parkway from western portions of NJ.

Anyway check out my web page for ALL of the freqs and the talkgroups. You should better understand the system after you do.

> Any help would be appreciated! I am specifically interested in the
>frequencies transmitted from the New Brunswick office at exit 9 of the
>Turnpike..

Note, the transmitters are not located at the old sites (New Brunswick, Moorestown, Newark) anymore - they are now at the trunked radio system sites.

I couldn't have said it better. I also wrote a letter to USSN stating my displeasure with the naming of Peter Laws (owner of scan-l) in the lawsuit. I was an active memer on scan-l until this incident.

I agree with the three actions above, but I will take #2 a little further. I am going to find out some of USSN's major advertisers and contact them via phone or email to voice my concerns. This is how the Football clubs delayed the encryption of NFL games on the networks until an acceptable delivery system was established. A few years back, NBC and CBS scrambled their football signals and the clubs protested by writing and calling the major advertisers (mostly the Beer corporations). It must have worked because the games were not scrambled a few weeks later! Presently you can purchase the entire season for all NFL teams playing on Sunday afternoon.

Our voice in numbers will be heard!

3579. PRO-60 and Federal VHF Band

Newsgroup: rec.radio.scanner
Date: 1996-09-03 00:00:00 UTC
From: wood@nexus.aer.loral.com
Message-ID: <50hkec$8ga@wdl1.wdl.lmco.com>
Source record: 224490

I recently purchased a PRO-60 at a recent Radio Shack sale (paid ~$250). I've been happy so far listening to the local PD, FD, etc. Over the weekend, I decided to explore some of the Gov't bands and found a problem. According to the FCC Freq Alloc table, the Federal VHF band (162-174MHz) is allocated on 12.5kHz steps. The PRO-60 has fixed step-sizes and that range is set to step at 5kHz. This effectively locks out half of the frequencies in this range (anything in the xxx.xxx5 range). Is this a known defect in the PRO-60? I checked the date code and it is an made in early '95 (5A5). Would a newer model fix this problem. I can't quite justify spending another $100-200 for the PRO-26 just to get these freqs.

Any ideas on how to overcome this problem?

Thanks in advance,
Bill Wood

They claim it is a secure phone with "65000 digital codes"...but in
reality, anyone with a 900Mhz scanner can pick up the signal. (it is not
spread spectrum).

As of last year (around September), if you bought the RS catalog for
however much it was (3 bucks I think) they would give you credit to
purchase that amount in any RS.

Although when I bought an HTX-202, I bargained for actually 3 catalogs.

This reminds me of the following song-

I dun-no if its true
but I have heard and it's been said...
RA-DI-AX got its name
from
RADIo shack coAX

In a pinch I made a dummy load for 900 MHz from about 150' of Radio
Shack RG-8 coax. It wasn't a perfect dummy load but it served the
purpose.

Why not go to the next hamfest and get some 1/2" heliax and some
connectors? You might actually be able to receive what your antenna
"hears." If the 7/8 LDF is cheap then so much the better!

It is not possible to answer your question yet. There are too many variables. Bear with me.

You can read a book under a 100-w incandescent light bulb from several feet away. Even right close to it, it is not likely to do any permanent damage to your eyes.

Yet you can't read a thing from the light of a .005-w laser diode, but it could blind you from 100-ft away.

Next, imagine a 1-watt flashlight bulb in a socket with no reflector, trying to light a room. It will be dimly lit. Now put that same bulb in a flashlight and any spot in the room where you point it will be much brighter than if illuminated by the normal 100-w room lamp. The rest of the room will be dark, of course. But the spot will be brilliant.

Ponder the above, because the concepts there are identical for antennas.

Now there is no such thing as a "best antenna" for scanners. There is only a "best" for YOUR needs and objectives. There are three primary characteristics of antennas that have to be considered:

1. Gain - (How "powerful" the antenna is.)
2. Bandwidth - (The freqs at which it has max reception)
3. Directivity - (Good for some directions and not others) (or, good for all directions)

I need to know what you want there. You can't "have it all". But we can get down to two simple questions for you to answer:

A. Do you want to receive equally well around a full 360-degree circle? Yes/No

B. Do you want to receive equally well from about
30-MHz to 1 GHz? Yes/No

If yes to both, then the probable best antenna for your
desires is the Icom AH-7000 or the Diamond D-130J. These
are discone style antennas with 0 dB gain, but are
omnidirectional and extremely wide-banded.

If *not* yes to both, then the number of variables gets too
huge to address until you give more details of your needs.

Rgds,

Bill

Bob Parnass post some bearcat repair tips in the group from time to time, which covers the BC300. Uniden will fix them for about $55. I've got one that had to be fixed over the years, so I sent it to Uniden. I use it as a "baseload" scanner (on all the time monitoring important frequencies). A while back Andy Rooney (60 Min.) was doing a piece on his "stuff" that didn't work, but he couldn't bring himself to toss out. In the middle of the pile of "stuff" on his desk was a BC300!

My experience in the Milwaukee WI area is that the SS freqs are scrambled,
however, the local police have a lot of activity regarding the trip.
Here in Milwaukee, the local police have anti-sniper squads and get
positioned on rooftops in the area of the visit.

I recently purchased a Radio Shack Multiband antenna (20.00
Dollars) for my Hand held Pro-46 Scanner. Due to height
restrictions, I placed the antenna approximately 10-12 feet above the
ground...The reception is not that great compared with the small wic
antenna that came with the Pro 46.

Do You think, the problem is the Rg58 cable (20 Ft). There
should be a huge difference between these antennas in reception.
What happened

There's a big dirt lot behind a hill between the LA Police Academy and Dodger Stadium, just a little to the east off Academy Road. There's a training setup there called Camp Snoopy. It was heavily used after the King Riots, and may still be used today. You can't see it from the road. It has trailers for personnel and a K9 training course.

They trained with a lot of 37mm foam rubber rounds as well as tactical stuff. I believe they put the entire force through it because of the less than stellar showing during the riots. It must still be in use.

That's probably what you heard.

>
> Jim..

Jim,

The last coax(RG-8) I bought at Radio Shack had a very poor shield.
Braid was uneven.

Ask yourself four questions.

How long a run of transmission line do you need?
What is the highest frequency you will be scanning?
What is the most loss you will accept?
How much money do you have?

You can spend $0.20 per foot for RG58 with 16 db loss per 100ft at
900mhz
or $18 per foot for 2-1/4" hardline with .55 dbloss per 100ft at 900mhz.

I use 170ft of 1-5/8" hardline at the house--salvaged from commercial
use. :-)
Some of my friends have gotten the tail ends of cable TV hardline rolls
and built matching transformers(75ohm).

You ask about the next best thing to 9913, my opinion is 9914. It has a
foam dielectric and is a few cents per foot cheaper. 1.5db greater loss
at 900mhz, though. Same connectors.

Another alternative is Times LMR-400. It uses 9913 connectors, costs 1/2
of 9913 and boasts 3.88db per 100ft loss-900mhz(9913 has 4.2db
loss/100ft). Available from Tessco(800-472-7373) for $.44 per foot.
Sounds great, but I've never tried it.
You could be brave and try the LMR-600. Cost is about the same as 9913.
2.5db loss/100ft at 900mhz. Cost of connectors is the catch(about $16
each).

Hope this was useful.

"Picking up the signal" is one thing, listening to it is another! If you tune into the VTECH phone with a scanner, all you will hear is hiss. Yes, it is secure. The fact that it is not spread spectrum isn't really all that relevant--if someone was really determined, they could intercept spread spectrum technology as well.

3603. Re: Amusing...

Your starting an off topic thread obviously intended to be both inflammatory and derogatory clearly shows that you wish to be part of the problem, rather than the solution. Now that you have had your say on this subject,please contribute something about scanning (if you are able).

This is what they want you to think. It may be a 900mhz phone, but it
is analog and unscrambled. Bring your scanner into the store and try it
out (most stores that sell it also use it in the store because it works
so well).

You will be able to hear it crystal clear.

This is the 910ADL from VTech.

Hello, This is Vince McMahon coming at you live from Hazzard County. Tonight we present the greatest match of all time, Captain Scanner Bill Cheek Vs Mr.Manly Mackey. This match is one fall, no disqualifications....and here we go...Wild Bill flys out of his corner , smashing Mackey with a HUGE flying elbow...but Mackey counters with a headbutt to the groin, jeez, that musta hurt!!!! Mackey is now kicking the life out of Wild Bill, he looks hurt, he looks dazed!!!!! Wild Bills manager the lovely Mrs Cheek is screaming on the outside.....Wild Bill is dazed!!!! and The Manly one is really soaking up the boos from the crowd, loving every minute of it!!! Manly is flipping the crowd off, and they are going nuts!!! Mackey climbs the turnbuckle and flys off, dropping the big elbow to Wild Bills noggin!! Bill is hurt, there is blood oozing out of his nose....Mackey has this one all sewn up!!! Mackey Throws Wild Bill out of the ring and his manager goes running!! Can u hear the crowd booing??? Wild Bill is out!!! Mackey is strutting around like a giant peacock!!! Bill staggers to his feet, Mackey jumps out of the ring to continue the beating!!! OH NO!!! WILD BILL HAS CLOCKED MACKEY WITH HIS SUPER MODIFIED 2005!!!!!!! IT HIT HIM SO HARD IT BLEW TO BITS!!!!!(hope he has another one!!) MACKEY IS OUT COLD!!!!!!!!!! WILD BILL CLIMBS INTO THE RING JUST AS MACKEY IS COUNTED OUT !!! THE WINNER AND NEW WWF CHAMPION,,,,WILD BILL CHEEK!!!!!!!!!

Hope y'all enjoyed it....gotta go catch them damn Duke Boys-Roscoe P. Coltrane!!!

Message-ID: <kjnDx7vJ1.IAp@netcom.com>
Source record: 224259
Cross-posted to: rec.radio.scanner,alt.radio.scanner

George F. (georgef@prolog.net) wrote:
: Help, little new to scanners. Are MilSatCom military communication
: satalites? Can they be heard with a 'normal' scanner if so how bout some
: frequencies.

Try:
260.35 - 260.85
262.05 - 262.55
249.35 - 249.85
261.45 - 261.95
263.55 - 264.05
248.85 - 249.35
the above are specific blocks but other traffic takes place. Some is wide
band, some narrow band, some USB. Most is encrypted but every now and
again something comes thru in the clear. I think the last thing I heard
in the clear was an inventory manifest transmitted from Antartica to an
inbound C-130...

: I have a PRO-2006 & PRO-60 with a Discone Antenna, would this be good enough
: to pick these up?

I've used a similar antenna in Northern Calif to hear the Antartica
stations. A pointed skyward beam would be better. You used to be able to
hear some transponder beacons occasionally to point the beam to but I
haven't heard these on the air in a while...

Uh, what are the scanning consequences of the three story house I just purchased in the chi-chi (and more busy) section of town? It is covered in metal (not aluminum, I don't think) siding. (The kind that looks JUST like white wood till you get up to it and touch it.) *I'm* not getting out there on the roof and electrocute myself, but I also listen to shortwave. I don't transmit. I have a radio shack discone antenna and a couple of different indoor (simple) shortwave antennas. I also have a magnet mount scanner antenna. It might be fun to stick that thing outside on the metal siding :-) Also, if I get one of those small satellite dishes you don't suppose I could hide it in the attic do you? I didn't think you'd say yes :-(This is the chi-chi section of town, and my little hobby is to remain my little secret! Should I take my little toys on the inspection and check? really all I was wondering for now is whether that siding will interfere with my fun. :-) Or if it will help...maybe I can connect it and use it somehow!!!

Thats possible, except that a Dodger game was in progress. And by the tone of the officer in charge you wouldn't have thought it was a drill. It also was out in the street, not in the parking lot.

MAybe they were testing the officer in charge!

That still doesn't tell me what a Strike Teams is though.
cheers

VEGGIEPETA <veggiepeta@aol.com> wrote in article
<50a8m9$8b9@newsbf02.news.aol.com>...
> I have an all band base station scanner antenna [Radio-Shack-20-176A].
> Anyone had experience with this? I am now using a magnetic mounted cb
> antenna mounted to my gutter. Will the scanner antenna improve reception
> mounted to gable?Thanx.
>
Is the antenna you are talking about a base or mobile antenna? (I don't
have the RS Catalog so I don't know).

On the assumption that it is a base antenna...
I have a RS All band base antenna (108-1300Mhz) monted from my ceiling and
it works great..IF you are using a CB antenna for your scanner change to a
scanner antenna this will improve reception in bands outside the 11 and 10
Meter area.
.
At one point I was using a 800Mhz Cordless phone antenna but lost lots of
Transmissions on VHF (148-174) UHF (406-512). After switching to scanner
antenna my reception improved on the bands mentioned above but decayed a
little on the 800Mhz band.
.
Give the scanner antenna a try...

3621. RS-2042 & Opto 456 board...

Newsgroup: rec.radio.scanner
Date: 1996-09-04 00:00:00 UTC
From: ccartee@cisco.com
Message-ID: <CCARTEE.96Sep4122316@griffon.cisco.com>
Source record: 224272

I have some questions regarding the operation of the RS-2045 with the Optoeletronics board installed...

1. How difficult was the installation? Did it require any surface mount soldering? Any soldering at all? Did it reqiure any holes drilled into the unit?

2. Does installation effect scanner use with computer off/disconnected? (For example does the CTSS option work?)

3. Exactly how does CTSS work? Does it control scanning, or does it simply indicate received CTSS tone? (And require some external control program to resume scanning?) Which CTSS tones may be programmed? Is CTSS tone displayed to scanner's built-in LCD or is it transmitted via serial port?

4. Does computer interface have the ability to load scanner's internal memory? (i.e. Can I download frequencies, disconnect computer, cycle power on scanner and still retain programmed frequencies?)

5. How is DTMF decode presented? Via built-in LCD or via serial port?

6. Does the 535 do anything to the allocation of channels and banks of the 2042? (i.e. Does it split up those monster 100 channel banks into something more reasonable?)

Uh, pardon me, but what sarcasm are you referring to? All I see is Bill pointing out that there are several mods. Have you checked out his web page? Are you one of those people who is upset because he expects to make a profit off of his work?

Yes, these flame wars are getting silly, but Cheek isn't the only problem. People like you who read into what he says when he ISN'T contributing to the flame wars are just as bad.

Now I guess it is time to unsubscribe... This is just plain intolerable......

Well, you didn't say which state you are from, but most of us want the
frequencies used for any given area. I personnally like to listen to the
fire dept., but also listen to anything else given the chance.
Thanks for any info you can provide the group.

What Bill sez about stacking and the interference is true, but, not
insurmountable.

The same porblem can also happen when stacking two computer displays.
Sheilding *might* be helpful; physical seperation may not always be possible.
The first thing I'd try is a piece of metel connected to a good ground BETWEEN
the radios. The next level might be to use metal boxes, such as a tin bread
box; connect it to a good ground, and put the desktop radio in it, the other

on top. Caveat: interference could, in theory, be transmitted via the antenna connection itself, depending in circuitry.

The splitter Bill mentions is a PASSIVE device. An antenna amplifier can make up for this loss; I'd recommend an adjustable output model. There are models that have multiple output ports. Bandpass is an issue here.

The common inline coax type of antenna amplifier sold by Radio Shack is 10 db of amplification, and is mounted up at the antenna, with a power supply module that plugs in a wall outlet. The bandpass goes up to 950 mhz. Before you shop for an amplifier, determine what freqs are important to you, and then match the amp to the freqs desired. Caveat: Antenna amplifiers CAN do too good of a job, amplifying pager signals, harmonics created by frequency mixing, and damn near everything. That's why I suggest a variable output type so you can dial in the ammount of amplification desired, or whatever works best for you. The last thing you want is the type that has the amplifier at the radio itself...it'll also amplify NOISE as well as signal.

Good luck,>

We, the Ventura County ARES Area 6 Packet Radio Training Group have created a download-able version of our manual on the World Wide Web.

We hope you enjoy the manual as much as we have enjoyed putting it together, and please feel free to pass it along to all interested in packet radio. It is our intention to make this material available to anyone who desires to have it. You may freely make copies and distribute
it, hold classes using it, modify it and train from it, etc.

We are giving this freely to the ham community to promote the free exchange of information and fellowship among hams. We hope you also see fit to pass it on in the same spirit. You will find it at:

http://www.fishnet.net/~dlmiller/packet.html

This is an HTML version of the hard copy reference manual which we use in
our Packet Radio Training Course.

For questions and/or comments about this web page or the class which we teach, please send a message to one of the following:

Another point I'd like to add is that HOW will a law enforcement officer even KNOW you have a scanner unless you're pulled over? If you're discrete, obey the traffic laws, and don't have an antenna farm on your vehicle, how will they know? My advice is to simple BLEND IN..!

Also, a hand held scanner can be quickly stashed under the seat if you do get pulled over. Antenna couplers exist so you can use your car antenna can be also used for the scanner.

>spectrum... the transmission is (pseudo)randomly scattered across a band.
>The phone jumps from one freq to another, quickly, making it pretty much
>impossible to decode unless you can predict the hopping sequence.

Actually there are 2 basic types of spread spectrum:
1. Direct sequence
2. Frequency hopping

In direct sequence, the phone uses 1 carrier frequency but the
modulation is such that the bandwidth of the modulated RF
is very broad, like 1.5MHz. Thus no narrowband receiver gets
much of the energy plus the modulation is a psuedo random code
that averages to 0 over the speading sequence. A wide band
receiver and the ability to lock on and correlate the modulation
with a matching speading code is required to receive.
Multiple phones may share the same carrier if each spreading
sequence is orthogonal to all others. Gradual performance degradation
may occur as many phones share the band.
The term "orthogonal" is really the key. Look it up in a math book
if you can or e-mail to discuss if you really want the nitty gritty
details.

In frequency hopping, as stated, the modulation may be conventional
narrow band but the frequency hopping sequence is pseudo random
and the receiver needs to match the hopping sequence.
Thus no narrow band receiver gets the energy for any significant
time. Multiple phones may share the same band if their hopping
sequences cause few collisions. Again, gradual performance degradation
may occur as many phones share the band.

That static may just be static, not the transmission.
Turn off the phone while monitoring to tell.
Do some more testing and report what you find, this is good info.

Push them on this issue!!!
Tell them you are making a sizable purchase but you won't
do it unless they give you a catalog.
I frequent 2 RS in my area so I've built a reputation as a known
customer.
They are easing on this so past protesting might be working.

i have the MVT 7100 and it is a very good scanner , there is only 2 problems :

-- transmodulation with 88-108 wfm band
-- qrm with my computer (if you have the solution for it show me !)

i listen somes stations with the MVT 7100 and not with a realistic pro 2024 !

i dont is the AR 8000 is better than the MVT 7100 but the MPVT 7100 is very good , if you have not the 7100 but it

Larry, you da man...

More than likely this was like Larry said a training session. I wonder what they would do without the Dodger Staduim parking lot? Also, for those unfamiliar with the area, the LAPD academy, amde famous in the televsion show T.J. Hooker (Boy I'll bet Wille Shatner wishes he never did that series) is right next door to the Dodger Staduim parking lot as well.

A Strike team formation was something that they came up with after the riots, basically, it's a wedge sorta formation using vehicles in the forward rows with the doors open, and then having officers on foot behind the cars in fully riot gear. All of LAPD's new cars have bullet-proof armor in the front doors.

The shotguns in this scenario would have rubber pellets or bean bags,
which are used in crowd control situations. The rubber pellets are aimed
at the ground and fired which causes them to bounce back up at the crowd,
and the bean bags are fired right at the crowd, both are non-letheal.

>antenna that came with the Pro 46.
>
> Do You think, the problem is the Rg58 cable (20 Ft). There
>should be a huge difference between these antennas in reception.
>What happened

Could be a couple things:
1. What frequencies - the multiband may be poor in some bands.
ex. my RS discone is not as good as the RS portable telescoping
antenna w/BNC mount in the 49MHz band.
I've heard the discone can be improved with a vertical element
screwed into the top.
If it's higher frequencies, it may be connectors.
2. What is the RG58 spec - like loss/100'. Some RG58 may have
enough loss that for 20' it loses all the antenna gains.
Connectors too - some are not good for 400+MHz. I use low loss RG6
and BNC or F connectors, no PL-259.

Specific tests should help with more advice.

As the guy outside the baseball stadium said, "Say it ain't so, Joe"

Freedom can be stolen in many ways. One is by censorship, but another
is by allowing one individual to pursue their 'rights' without regard
for those around them. The guy who sits in a public place immersed in
filth, claims it's his right, and dares you to try and move him, is
stealing your freedom, just like censorship does.

Study democratic nations (The US is not the only one, remember) and
you'll find that their constitutions allow reasonable limits on
individuals' excercise of 'rights'. That's why Canadians can't own
handguns, Americans can't listen to cellphones...and so forth.
Communities set standards, and then require their members to meet
them.

I wish we could create a community standard in this newsgroup. Closing
one's eyes doesn't uphold the community standards, it mocks them.

>And for all of those out there who think I should crawl under a rock and die,

>Ok, Bill, you win.

What is there to win? Got any money or land? If so, great.
If not, then it's bullshit.

>I hereby withdraw any and all statements made regarding a new group or
>moderating. I now realize that Bill is the way, and that all others are
>liars.

Look at the tone of your message, pal. So how would you act
or react on a moderated group when someone disagreed with
you? Your colors are shown already before the thing gets
off the ground, and you WONDER why I am resistant to it?

Don't wonder. Such is the very essence of which moderated
forums are made. Mackey and Duff will attest to that.

>For those of you that felt perhaps moderation was a good thing, I'm sorry.
>Perhaps someday things will change for the better. I doubt it though...

Geezus, pal, things are as good as it gets! You go waltzing
off to start a new forum, cool.......but what the hell is
the difference between THAT and starting a new church or
even a new country?

Separatism. That's what it's all about, and only furthers
problems - NOT solves them. No, Mr. Payne, "my way" is not
THE way. But it is "a" way that deserves a hell of a lot
more consideration and respect than your phony "cool hand
Luke", suave, debonaire, sophisticated demeanor has given
it.

>And for all of those out there who think I should crawl under a rock and die,
>I shall. I have learned a lot from the group, and have even contributed a few
>things along the way (although no one will admit it). I'm sorry I ever
>pressed the POST button.

Why? Because you couldn't drum up a new congregation? If
that's not it, then stuff a sock in it and go right on
playing the game as YOU feel is right and proper for YOU.
And lay off me and everyone else with whom you violently
disagree. Just live up to your rules and leave me to live
mine; Mackey to his; Duff to hers; and whomever else wishes
to participate in their preferred styles.

>Goodbye and good luck!!

That's bullshit. Throw your marbles back into the circle and just be. Be who you are and give others the freedom to be who they are. Contribute. Take. And cut the negativity.

Look, man, you want THE truth? Yours and Hobart's recent actions and mannerisms are far more negative, damaging, and destructive than those of Mackey and Company. THEM, we can laugh AT and WITH. You and Hobart? You dudes are as serious as a heart attack.

Here in virtuality, no less. Good grief! Lighten up.

Newsgroups: rec.radio.scanner
Subject: Re: Washington state Ferry Freqs
Date: Fri, 28 Jul 1995 12:31:51 -0700

Whidbey's and San Juan terminals have switched over to the new statewide DOT system. The Simplex freqs that are used at the docks are:

Dock 852.0875
Boat 1 852.8375
Boat 2 851.7875

The other terminals are still using the old freq of 151.04. I expect them to switch over to the new system although the range on the new 800 portables is very poor and the ferry system is aware of the problem, so what comes next is anyone's guess.

I'm not sure if or when system will stop using ch #79 156.975

I'll offer a suggestion for those who need metal shielding (for whatever reason) applied to plastic cases: Aluminum foil Air Duct and Connector Closure Systems Polyken 339 [courtesy of my air conditioner repairman]. It has adhesive that holds up under heat and cold (will not harm polystyrene plastic by a personal 4-day test), comes with a paper backing for easier marking, fitting, or cutting. The two-foot strip I have is 2" wide. Appears to be some sort of coating on the visible part of the foil, may need to be scraped slightly for good contact. Cheap. Similar foil can be found at OSH (Orchard Supply and Hardware chain).

How to add a hold function to the Radio Shack RF Frequency Counter:

Ground TP17. In the schematic, TP17 is pin one of U3, connected to
+5V thru a 47k resistor. On the circuit board, TP17 is on the display
side, just right of the lower-right corner of the IC. Grounds are about
1/4 inch below and to the right, the three non-tinned points in the large
area of metal.

I grounded TP17 directly and the display stopped. After lifting the ground,
the counter resumed counting at the beginning of a sampling cycle.

Personally, I would ground TP17 thru a 1k resistor. I haven't performed
the mod to my RS counter, since the pads are VERY small and my fine-tip
iron is at work. I will try the 1k Hold mod on Monday and give a report
(unless somebody beats me to it).

An amplifier mod to increase the sensitivity is in the works, reports to follow

Happy Trails to You,

How to add a hold function to the Radio Shack RF Frequency Counter:

Ground TP 17. In the schematic, TP17 is pin one of U3, connected to
+5V thru a 47k resistor. On the circuit board, TP17 is on the display
side, just right of the lower-right corner of the IC. Grounds are about
1/4 inch below and to the right, the three non-tinned points in the large
area of metal. TP17 is the tinned pad next to a SM resistor marked '473'
for 47k.

I rigged a momentary switch to ground TP17 thru a 1k resistor (you never
can tell) and it works just fine! I drilled a small hole to mount the switch
just above the plastic depression so I could push the button with my right
thumb. A small toggle switch would fit.

I'll be trying the other TP's to see what wonderful things RS didn't put
on the front.

>>I guess I'm now an "insider" so here's my info.. Last years catalogs
>>had a $3 price but had a $3 off coupon on them. This year, it's $3
>>but actually free unless they think you're never going to be seen
>>again. You're supposed to give it to all regular and repeat customers.

I walked into a RS last week. Picked up a mere eight dollars worth of stuff. Asked the salesman - whom I had never seen before in my life - if the new catalogs were in yet. He said that they were. We walked to the cash register, he reached down and pulled out a catalog from under the counter, said, "They're three bucks, but I'll take it off your bill."

Unsolicited - I didn't ask a damned thing of him. He didn't know me - and he made the offer BEFORE he asked for my name/address for the computer.

>I have not seen where he has said that he wanted to take over this
>group and am unsure if he could. I you want to discuss it do so. but
>do not flame. flaming gets nothing done. except wanting people to
>have a moderated group.

I didn't flame. If I spoke direct and blunt, that's the way
I am. It beats mincing words and not being understood to
the other extreme.

Part was my own ignorance at the onset. I took it to mean
he was going to take THIS group to moderated status. I am
not an expert on the ways and means of the Internet (yet).

I took it to mean that because of his attitude and the face
value of what little he did have to say. I went on to throw
my hat into the ring, and he snubbed me. His brand of flame
was low key, but ever there, ever present. It hung like a
cloud. You don't call that a flame? Ok, but then don't
call my bluntness and getting to the point a flame.

Facts of the matter are that Payne COULD have started a
discussion and information thread and given such a serious
matter more than "a few days". He could have led the
discussion; promoted questions and answers; and made a solid
foundation for his case. Instead, he openly discouraged
discussion and the group's becoming INFORMED about the
matter. I didn't like the smell of that deal from the
git-go, and exercised not only my right, but also my duty to
say so.

Hence, my directness and bluntness in evoking anwers to
questions that were genuine on my part, and probably in a
lot of others who were intimidated into not asking.

Thank you.......thank you.......thank you! You've put an
exclamation on my point !!!!!!! You see, despite the fact
that he clearly stated, "rec.radio.scanner.moderated", he
embelished it at the end with "Thanks for helping *this*
group become even better!"

Makes it pretty clear to me that he was after THIS group.
He said so. He said so very explicitly. While I did not
focus on the keywords at the time of his post, the tone that
I took from it was succinct and not interpreted. It was at
face value.

To make matters worse, he refused to discuss it or to answer
questions. He appeared to want to hide behind e-mail. The
whole scenario, as it unfolded, had questions and doubt
strewn throughout.

Dammit, Hansen, you beat me to the punch. I had a nice two page missive all prepared to go, in effect telling him to check the ATT switch on the rear panel, and there you tell 'im in a few poignant words.

Seriously.....I was hot to trot on that one, because it's bitten me more times than I can count. I'm so damn gunshy of that 10 dB Attenuator now that I automatically feel around back of the scanner whenever I turn the prick on.

I'd lay 2:1 odds that's his problem. But if not, make it 1:1 that the center conductor contacts on the BNC connector have gotten separated, worn, or even broken off. Odds are about 10:1 against it being anything inside the scanner.

He should point a jaundiced eye toward the antenna, too, if nothing else proves out. Or even damaged coax, maybe.

Humbly,

Bill

>Freedom can be stolen in many ways. One is by censorship,

Indeed.

>but another is by allowing one individual to pursue their
>'rights' without regard for those around them.

Ummmmmmm, in REALITY, that statement holds a carefully measured amount of water. "Without regard", however is not a criterion test for the validity of your statement. It is perfectly acceptable and even morally correct in some instances to NOT have regard for rights of others when in pursuit of one's own rights and civil liberties. I don't want to get into a litany of those instances, but let's refer to "victimless" acts and move right into virtuality.

>The guy who sits in a public place immersed in
>filth, claims it's his right, and dares you to try and move him, is
>stealing your freedom, just like censorship does.

That may be so.....but virtuality is not a place nor is it public. It is a concept totally devoid of anything tangible and physical. Your statement has no parallel in virtuality though you are trying to draw one.

>Study democratic nations (The US is not the only one, remember) and
>you'll find that their constitutions allow reasonable limits on
>individuals' excercise of 'rights'. That's why Canadians can't own
>handguns, Americans can't listen to cellphones...and so forth.
>Communities set standards, and then require their members to meet
>them.

Here again, you are trying to parallel reality with virtuality.

>I wish we could create a community standard in this newsgroup. Closing
>one's eyes doesn't uphold the community standards, it mocks them.

Why do you say that? There is no relationship of reality to virtuality. You are trying to infuse your perception of a virtual "thing" into a semblance of rule and law. This is extremely dangerous for society, civilization, and especially our way of Life.

Look, let's digress over to another "world" for a moment: TELEPATHY. We know that it exists. It has a name. It has

been demonstrated to be be outside the realm of chaos and chance. We just don't know how to tap and reliably use it (yet). But what about when we do?

You will be the first one to call for the "thought police" when you read someone else's mind begging for you to go lay an egg and sit on it. It goes downhill from there.

Virtuality is a form and forum that is best left alone from civil, social, and moral tampering and engineering. One, you have a choice of coming here or not. Two, you already possess total control, and if you wish, you can execute me on the spot.....FOOF! ZAP! I'm dead. You have....or should have full and total control over your computer and everything in it. Including me, if I'm in it.

Why isn't that good enough? Why do you feel compelled to be a meddling, goody-two-shoes, tearfully begging for a force to control others? Don't you understand that once this force is in place, it can never be excised and that it will work against you, sooner or later?

Why not just stuff a sock in it and control your own domain? You already possess a cast-iron, force-field condom. Nothing from virtuality can enter your reality unless you permit it.

>>>Can this scanner be modified to receive cell phones ?

>>Only if it has a date code of 2A4 or prior.

>HHMMmmmmm, , , I thought it was 3A4, Bill ?

In theeory, maybe it is. In practice, PRO-43's made in
March, 1994, would not have been shipped and ready for sale
in this country until after April. The manufacturers had
plenty of notice of the TDDRA law, so compliance was nailed
down and implemented such that 2A4 seems the most certain
cutoff date.

It may well be that some 3A4's can be modified for cellular,
but, but I am sure that most are not. Jerry Dallal, in his
PRO-43 FAQ, points out:

> So far, the earliest reported date of manufacture of
> a nonmodifiable unit is 3A4 (March, 1994). There have been *no*
> reports of a modifiable US 3A4 unit.
> THE PRESENCE OR ABSENCE OF A FINAL 'A' IN THE FCC-ID
> IS A DEFINITIVE WAY OF DETERMINING WHETHER A PRO-43
> CAN BE MODIFIED FOR EXTENDED FREQUENCY RECEPTION.
> IF THE FCC-ID IS 'AA020-300', THE UNIT IS MODIFIABLE.
> IF THE FCC-ID IS 'AA020-300A', THE UNIT IS NOT MODIFIABLE.

I have no evidence to refute his statement and plenty to
support it, so 2A4 or earlier is the safe bet. 3A4 and up
are trouble.

Hi,

Can anyone tell me what kit I would need for effective communications between a rally car and service vehicle. Range would need to be at least five miles, often in hilly and forested areas (Mid & North Wales etc.).

I have heard rally crews many times whilst scanning (VHF) but the boot is now on the other foot and I need to invest in some radio kit for the rally team I help out but don't know what I'd need or what is commonly used.

Would buy new or second hand but kit must be sanctioned by rally regs. Any info on prices, range, licence requirements etc. would also be greatly appreciated.

Can anyone help me?

Thanks,

kevin jones

WANT TO MAKE FAST EASY CASH??? THAN READ ON

(FOR BETTER VIEWING WIDEIN YOUR E-MAIL SCREEN)

ATTENTION ALL FAST MONEY MAKING SKEPTICS!
PLEASE READ AND ANALYZE THE FOLLOWING AND DETERMINE IF
$10 IS WORTH KNOWING IF THIS IS REALLY POSSIBLE!!!!!

INSTRUCTIONS

Follow these instructions EXACTLY, and in 20 to 60 days you will have
received well over $2,000.00 cash, all yours. This program has
remained
successful because of the HONESTY and INTEGRETY of the participants.
Please
continue its success by carefully ADHERING TO THE INSTRUCTIONS.

Welcome to the world of Mail Order! This little business is a little
different than most mail order houses. Your product is not solid and
tangible, but rather a service. You are in the business of developing
Mailing
lists. Many large corporations are happy to pay big bucks for quality
lists.
(The money made from the mailing lists are secondary to the income
which is
made from people like yourself requesting that they be included in
that
list.)

1) IMMEDIATELY mail $5.00 to the first 2 people on the list below
Send CASH only please (total investment $10.00). Enclose a note with
each
letter stating: "Please add my name to your mailing list."
(This is a legitimate service that you are requesting and you are
paying $5.00 for this service).

2) REMOVE the name that appears number 1 on the list. Move the
other 3
names up one position. (Number 2 will become number 1 and number 3
will
become number 2, etc.)

Place your name, address and zip code in the number 4 position.

3) Upload The File To your MAIL BOX ON AMERICA ON LINE and Forward
It
to 50 Or More People. (This Works Really good if your not into

BBSes)
To upload the file to your mailbox. While your signed on to America Online, go to "compose mail" and put your screen name in the place where
it says "to:" (people to send to) and attach the file to the lettter.
And send the file to your self and forward it to as many people as you can.

4) Within 60 days you will receive over $2,000.00 in CASH. Keep a copy of this file for yourself so that you can use it again and again
whenever you need money. As soon as you mail out these letters you are automatically in the mail order business and people are sending you $5.00 to be placed on your mailing list. This list can than be rented to a list broker that can be found in the Yellow Pages for additional income on a regular basis. The list will become more valuable as it grows in size. This is a service. This is perfectly legal. If you have any doubts, refer to Title 18, Sec. 1302 & 1341 of
the postal lottery laws.

NOTE: Make sure you retain EVERY Name and Address sent to you, either on
computer or hard copy, but do not discard the names and notes they
send you. This is PROOF that you are truely providing a service and
should the IRS or some other Government Agency question you, you can
provide them with this proof!

Remember as each post is downloaded and the instructions carefully
followed, 2 members will be reimbursed for their participation as a
List Developer with five dollars each. Your name will move up the
list geometrically so that when your name reaches the number two position.
You will be receiving thousands of dollars in cash.

1) BRIAN DONNER
P.O. BOX 258
LINCOLNVILLE, ME 04849

2) DAVE GARCIA
9593 PETTSWOOD DR.
HUNTINGTON BEACH, CA 92646

3) SEAN BUGEL
319 ELIZABETH AVENUE

CRANFORD, NJ 07016

4) EDWARD DAVIDOSKI
67 HILLSIDE ROAD
ELIZABETH, NJ 07208

The following letters were written by participating members in this program.

To Whom It May Concern:

To start, I thought this file was a big host. And another thing that kept me skeptical to begin with is that it sounded very illegal. But I looked around a few local BBS's and found that this was going on everywhere. I decided to take part in this fast-money making process. So I did, and to this date have received more than $4,500 in cash in less than three months. I only have one thing to say for those out there in disbelief... it works.

About six months ago I received the enclosed post in letter form. I ignored it. I received about five more of the same letter within the next two weeks. I ignored them also. Of course, I was tempted to follow through and dreamed of making thousands, but I was convinced it was just another gimmick and could not possibly work. I was wrong! About three weeks later I saw this same letter posted on a local bulletin board in Montreal. I liked the idea of giving it a try with my computer. I didn't expect much because I figured, if other people were as skeptical as I, they wouldn't be too quick to part with ten Dollars. But, I buy lottery tickets weekly in my province and have nothing to show for it but ticket stubs. This week I decided to look at this as my weekly lottery purchase. I addressed the envelopes and mailed out the money in each as directed. Two weeks went by and I didn't recieve anything in the mail. The fourth week rolled around and I couldn't believe what happened! I can't say I received $20,000, but it was definitely well over $4,000! For the first time in ten years, I got out of debt. It was

great.
Of course, it didn't take me long to go through my earnings so I am using
this excellent money opportunity once again. Follow the instructions and get
ready to enjoy.

Good Luck,
Charles Kust
St Agathe Que.

To all disbelievers,
At first I took this letter as a scam, for people that just wanted to
to make a quick buck off of me. But then I decided to give it a try. Any
way, it was only 10 dollars we were talking about. I sent out the 10 dollars
the next day. I didnt think it would work, because after all it had been two
weeks and I had recieved nothing in the mail. But then I started to recieve a
lot of mail from all over America. California, Michigan, Oreogon, Minnesotta,
Ohio, and New York. I couldn't believe this. I ran in my house as soon as I
could and opened it all. That day I recieved over 200 dollars. This continued
for about 4 more weeks! At the end I recived about 35,000 dollars. I was so
happy! I could probably have recieved 45,000 if I would have sent this to more
people. That was my mistake. So I did it over agian. This time making sure I
got this out to everyone I could. Within 6 weeks I had now recived 44,000
dollars. Now I will use this tacktick for whenever I need money again. You
would be suprised how great this works. If you do decide to do this remeber
follow " ALL OF THE INSTRUCTIONS AND DONT MISS A STEP." Otherwise this
will not work. This is a great program if you want it to be.

Best Wishes,
Grant H. Jones

> -Clint Bradford

Unfortunately, that is not universal. I went in to buy a repeater atlas, and asked for a catalog. I was charged full price for the catalog. As the saying goes, it's not the money-it's the principle of the thing. After all the money I've spent at Rat Shack over the last 25-odd years, I should not have to pay for a catalog-especially since I use it to obtain stock numbers to help the salesmen out. How about your views? send them to Radio Shack:

rs.customer.relations@tandy.com

Otherwise, expect a hard line approach to catalogs in the future by the salespersons (NO Exceptions to the fee) and higher fees.

Thanks for everyone's help!

>Any known mods for this Hand-held?

To do what, restore cellular ?

On the assumption this is cell blocked in the same way as all the new PRO-series (hardcoded in the main CPU) you would have to buy the main Chip used in the UK version and replace the one you have. Not an easy job.

Same would apply to the PRO-2035 you ask about.

Take a look at http://www.demon.co.uk/javiation/

> thanks....Gary

There is an excellent article in the February 1996 issue of Monitoring Times describing virtual downconversion. In short, It takes advantage of the image frequency. The image frequency occurs when a received signal is mixed with the intermediate frequency of the unit. This results in sum and difference frequencies. One of these is amplified, the other not amplified/attenuated. The frequency that is Not amplified is the image frequency. Through a few calculations, it boils down to taking the first IF frequency multiplied by two, and adding or subtracting to the desired frequency. For cellular, if the first IF is 10.7 Mhz and the desired frequency is 870, you would check for images on:
870 + (10.7 x 2) = 891.4

or

870 - (10.7 x 2) =848.6

note that both of these are still in the cell range, so the lower cell frequencies would still be blocked.

The virtual downconverter essentially attempts to remove the attenuation (filters) to the image frequencies by the use of a switch.

Pick up the article. It's much more comprehensive.

Hope this helps!

I'm selling the following:

AOR 2500 - $450 obo
and a
TRIDENT 4500 -$450 obo (which is a AOR2500)

Both are in excellent condition.
Full Cellular, AM/FM/NFM/SSB

ICOM 2GXAT 2m extended RX - $225

2 RS TRC-207 40 ch handheld CBs - $85 for both.

Bearcat 560xlt 16 ch scanner - $60

E-mail any questions.

No, these are reallocations of UHF T-band frequencies and some new
channels in the 482-484 MHz area.

Anyone else have any ideas?

Can a multi-band scanner be tuned to perform optimally on a specific band? I realize this would be at the expense of the other bands but I have an old scanner that I don't use. If it was sensitive enough it could still do some useful service monitoring a specific UHF frequency. Can this be done?

You have no need to feel intimidated, Bill. The usenet news groups are open to everybody. There are quite a few "faq"s out there in cyberland that will give you step-by-step directions for creating your very own news group with every bit of the legitimacy of *any* other news group.

There's no reason to be concerned with anything that happens here on this group. You can start your very own news group about five minutes after you read the faq. You can set it up as open or moderated. The group won't be automatically carried by every ISP in the beginning (no ISP carries *all* the groups even now), but almost every ISP will add the group if only one or two of their users will ask for the group.

You could give users a choice of news groups. Competition is a good thing, in America at least.

> frequencies for a search.

The frequency used as an example is 460 *point/decimal* 15Mhz

The "SFT" key is the decimal point.

Just keying in 460150 could be 46.015MHz or 460.150Mhz (as in the example),
both of which are valid frequencies. You have to tell it where the "."
(point) is so you key in 460 "point" 15 then enter.

> 2) Unlocking All Channels after doing a search (page 31). While doing

As you say you have to pressing the "HLD" key will stop the search.

Can't speak for the BC-3000XLT manual but the UBC-3000XLT manual I have just
looked in (uses the same examples and data) shows that you press "HLD" to
stop the search (Diagram top right of page 31) so I assume the BC-3000XLT is
a misprint, perhaps in time they will print a revised version.

Jim, your next step up is to 1/2 inch 'Heliax' from 9913.

In our 'business' (a cellular operator, AT&T WS, in Dallas) we have used
and still use each of the following: 9913, 1/2", 7/8", 1 1/4" and
1 5/8" Heliax (in the RSA's).
We use the 9913 for low-budget installations at 800 MHz where we can acccept the
loss, i.e., we do link-budget calculations versus cost versus the predicted coverage
area. We have used several hundred feet of 9913 where we could tolerate the loss
(what: 8-10dB?). If we *think* need less loss we move up to 1/2" (on relatively

low-budget projects, i.e., a cell extender inside a retail store). Any permanent installations we automatically specify 1/2" *if* it is sufficient - otherwise we move up the size scale again. We buy 1/2" with a discount, I think it works out to around a dollar a foot.

Regards, Jim

I posted this a while back...Still relevant...

=== A few notes on the Ramsey SCN-1 800MHz converter =====

The circuit is very basic with "okay" sensitivity, but I wouldn't
recommend it for DX'ing the 800MHz band! However, it is fine for
local reception. A cellular phone antenna works great. The mixer
is *nowhere near* a balanced type, so be warned: The output
contains a very large (about -3dBm) 400MHz LO signal that may
overload, cause images in, or de-sens some receivers. (Note: the
input and output are not well isolated, so the 400MHz LO RF
energy will *radiate* from the 800MHz receiving antenna)

Some Tips:

1. Buy some "right angle" PCB mount BNC connectors. The kit comes
with cheap RCA phono connectors! (BNC for output and TNC for the
input are recommended)

2. The oscillator that comes with it may cause some problems. The
oscillator is a standard 40MHz TTL crystal oscillator module. The
square wave output is multiplied 10 times to obtain the 400MHz
L.O. The module I received was 1KHz off frequency, which shifted
the output signals over 10KHz, enough to cause scanning problems.
I replaced it with a *80MHz* module and some socket pins. Now the
error is less than 2KHz. The 80MHz module seemed to give better
results (a cleaner LO signal) and a more accurate LO signal.

3. The power supply to the multiplier & mixer circuit is not
regulated and perfomance/sensitivity varies with supply voltage.
You may want to trim the supply voltage for best reception. This
will make the biggest difference in performance. Try adjusting
the supply voltage while receiving a signal. Mine seems to work
best on 8.35V (your mileage will vary).

4. I also placed some 0.1uF bypass ceramic chip caps at some
strategic places. Mostly this cleaned up the LO signal. The
specific spots were:

a. The supply side of L5 to top ground plane (you will have to scratch away the green solder mask).

b. At the +5V supply pin of the oscillator to bottom ground plane.

c. The supply side of R1 to top ground plane (cleaned up the LO).

d. Solder all leads that pass through both ground planes on each side.

5. Clean up the multiplier signal. If you have access to a wide bandwidth scope, connect the 400MHz output to a 50 ohm terminated scope input. The signal level should be around 200mVp-p. *Gently* spread apart, or squeeze, L6,7,8 & 9 and adjust them for the cleanest looking 400MHz signal. They *will* interact, but just adjust them for the nicest looking 400MHz signal (there will be "lumps" every 5-10 cycles). The actual signal level is not too critical.

6. The board is rather big for the size of the circuit it contains (10.5cm x 12cm). It definitely should be built in a shielded case (it does generate a lot of RFI). I would recommend one of those cast aluminum "Bud" box cases for good RF shielding.

Wadda' ya expect for $50!

A 35 to 45 mile distance begins the "fringe area" where the earth's
curvature cuts off line-of-sight propagation paths...assuming NO
change in ground elevation between transmitter and receiver. VHF and
above works on a line-of-sight path. "Ducting" or "meteor scatter"
effects could defeat that but they aren't that predictable nor are
they steady.

MM>What was/is the antenna height? Could a nearby high power transmitter
MM>be washing out reception? With any of these set-ups, how low could
MM>you set the squelch before you got hash?

A 40 mile distance calls for an antenna height of 50 to 200 feet and
a high-gain antenna for any sort of steady signal strength. It's an
unfortunate SOL situation, sad to say.

Gary Baker wrote:
>
> Could someone explain virtual down conversion to me,
> I have a pro 26 and understand this process can be done to my unit
> but not sure what it does!
> thanks....GaryHi,the Virtual Downconverter is a technique that I designed for scanners,in order to help cope with the reality of having incomplete 800 Mhz band coverage.The exact proceedure as it is applied to different scanners varies,but the goal remaind the same: The scanner's 800 Mhz band RF signal input filter section or it's entire 800 Mhz downconversion circuitry, normally controlled by the scanner's CPU is in effect "hot wired ON".The scanner is then programmed with a set of Search mode frequency limits, along with proper frequency step rate and signal demodulation mode as needed. Again,these parameters will vary with different scanner designs, but the intent here is to generate the correct range of Local Oscillator signals within the scanner that is needed in order to permit reception in the missing portion of the 800 MHz band; 869.04 - 893.97 MHz to be exact. The end result is perfect "on channel" reception at the same sensitivity as other 800 Mhz frequencies for that scanner.

This proceedure can be applied to a number of scanners,including the PRO-26, PRO-2040, BC80,BC220/230 and BC9000.We have documented specific examples of this in several articles in all major scanner publications over the past two years.

The principle of the Virtual Downconverter can be tested in a scanner like the PRO-26 or BC3000 by programming in a set of Search limits of between 360.2 and 385.2 MHz,then selecting Narrow FM mode and 5 KHz tuning step rate. When searching,you will likely pickup some signals from the 869 - 894 Mhz range, but since the 800 MHz band signal input filter is not being selected ON, the actual sensitivity of the receiver to the 800 Mhz signals will be fairly poor.This can be easily be corrected however.

With the PRO-26/BC3000 you also have the option of using the attenuator function to serve as the activation control for the Virtual Downconverter operation.This serves two functions: it preserves the "stock" appearance of the radio,in effect giving the radio "Stealth Conversion" capabilities. And since the attenuator can be set to specific memory channels,you can even set certain memories to have "normal" frequencies in them, or store 800 MHz "conversion" frequencies in selected channels as needed.Other scanners that do not have a selectable attenuator function require the installation of a small switch for the Downconverter function.

Some folks have noted that you can receive the missing 800 Mhz freqs up in the 1005 - 1015 MHz area. This is true,but since this is occuring by way of a harmonic (frequency multiple) of the receiver's Local Oscillator, you have two problems: One is since the harmonic is weaker than the normal LO, the receive sensitivity is much weaker than normal, also that even if you have a tuning step rate of 5 KHz selected, the actual tuning step rate will be 10 KHz.This combined with how the receiver's First and Second Local Oscilator frequencies line up,you will be missing about 30 percent of the possible active frequencies.This is not a problem with the Virtual Downconverter.

With scanners like the BC80 or BC230, using the Virtual Downconverter, you achieve a major improvement in reception of the 869 - 894 MHz range, Even if these scanners could program the entire 800 Mhz range,their tuning step rate would likely be 12.5 KHz,which would not be optimum for reception in the 880 MHz area. You would also have to contend with image interference from trunking services in the 860 MHz area. When using image reception in order to receive the missing frequencies up around the 910 MHz area, you still have the problem of 12.5 KHz tuning steps, and if you calculate it out,with the lowest frequency that can program into these scanners for 870 Mhz image reception, there is about a 3 MHz section in the 869 - 872 MHz area that you can't receive.

Pardon me a second, John! Is this an attack on my postings? I haven't seen anyone here OR on Fido who posts as complete and extensive listings as I have in the past, and currently do from time to time. Especially on Fido as not everyone on the planet has (or wants) access to Internet resources for what ever reason they may have.

As it has been mentioned previously, if you don't want or need these postings of mine, you are most certainly free to hit your next or delete keys at your convenience. There has never been anyone holding a gun to your head forcing you to read anything I post here or anywhere else.

Other than a previously mentioned message where you state you have a problem with abusing various drugs and alcohol where I wished you the best in any recovery you might be involved in, to the best of my knowledge you and I have never been in a pissing contest before. I am not going to start now as more than half of the message space this group is taken up by your drug/alcohol induced ramblings.

I still wish you the best though. You do need some serious counseling.

N-@>Roy...

I would again ask in the strongest terms that all those who either purchase(d) U.S. Scanner News (or RCMA) or have a subscription please cancel their subscription or don't purchase further magazines until US Scanner News decides to pay it's writers what they are due. In some cases, they are 7+ months behind from my understanding.

It would seem obvious to me (one of USSN's writers currently _NOT_ writing for them until ALL of their writing staff are paid) if USSN has the financial resources to pay high-end and expensive attorneys that they would and should have paid their writing staff FIRST!

It is equally as obvious USSN doesn't have an appreciation for the First Amendment of our Constitution. The legal action they are trying to initiate will certainly kill this hobby, as well as the makers of this equipment.

As a writer of USSN it is my considered opinion that it would much for the hobby if USSN went down the financial tubes instead of taking everyone in the industry (including us) with them.

Make up your own mind, but if you disagree, what would YOU recommend
doing if a firm owed YOU thousands of $$$$$$$$$?

Jim, your next step up is to 1/2 inch 'Heliax' from 9913.

In our 'business' (a cellular operator, AT&T WS, in Dallas) we have used
and still use each of the following: 9913, 1/2", 7/8", 1 1/4" and
1 5/8" Heliax (in the RSA's).

We use the 9913 for low-budget installations at 800 MHz where we can acccept the
loss, i.e., we do link-budget calculations versus cost versus the predicted coverage
area. We have used several hundred feet of 9913 where we could tolerate the loss
(what: 8-10dB?). If we *think* need less loss we move up to 1/2" (on relatively
low-budget projects, i.e., a cell extender inside a retail store). Any permanent
installations we automatically specify 1/2" *if* it is sufficient - otherwise
we move up the size scale again. We buy 1/2" with a discount, I think it works
out to around a dollar a foot.

Regards, Jim

Jim,

The last coax(RG-8) I bought at Radio Shack had a very poor shield.
Braid was uneven.

Ask yourself four questions.

How long a run of transmission line do you need?
What is the highest frequency you will be scanning?
What is the most loss you will accept?
How much money do you have?

You can spend $0.20 per foot for RG58 with 16 db loss per 100ft at
900mhz
or $18 per foot for 2-1/4" hardline with .55 dbloss per 100ft at 900mhz.

I use 170ft of 1-5/8" hardline at the house--salvaged from commercial
use. :-)
Some of my friends have gotten the tail ends of cable TV hardline rolls
and built matching transformers(75ohm).

You ask about the next best thing to 9913, my opinion is 9914. It has a
foam dielectric and is a few cents per foot cheaper. 1.5db greater loss
at 900mhz, though. Same connectors.

Another alternative is Times LMR-400. It uses 9913 connectors, costs 1/2
of 9913 and boasts 3.88db per 100ft loss-900mhz(9913 has 4.2db
loss/100ft). Available from Tessco(800-472-7373) for $.44 per foot.
Sounds great, but I've never tried it.
You could be brave and try the LMR-600. Cost is about the same as 9913.
2.5db loss/100ft at 900mhz. Cost of connectors is the catch(about $16
each).

Hope this was useful.

There's a big dirt lot behind a hill between the LA Police Academy and
Dodger Stadium, just a little to the east off Academy Road. There's a
training setup there called Camp Snoopy. It was heavily used after
the King Riots, and may still be used today. You can't see it from
the road. It has trailers for personnel and a K9 training course.

They trained with a lot of 37mm foam rubber rounds as well as tactical
stuff. I believe they put the entire force through it because of the
less than stellar showing during the riots. It must still be in use.

That's probably what you heard.

Another point I'd like to add is that HOW will a law enforcement officer even KNOW you have a scanner unless you're pulled over? If you're discrete, obey the traffic laws, and don't have an antenna farm on your vehicle, how will they know? My advice is to simple BLEND IN..!

Also, a hand held scanner can be quickly stashed under the seat if you do get pulled over. Antenna couplers exist so you can use your car antenna can be also used for the scanner.

I would agree that the ATT 9100 is a good phone.. I tried to find the
frequencies it
uses with no luck at all (Searched 902-928).

> mounted to gable?Thanx.
>
Is the antenna you are talking about a base or mobile antenna? (I don't
have the RS Catalog so I don't know).

On the assumption that it is a base antenna...
I have a RS All band base antenna (108-1300Mhz) monted from my ceiling and
it works great..IF you are using a CB antenna for your scanner change to a
scanner antenna this will improve reception in bands outside the 11 and 10
Meter area.
.
At one point I was using a 800Mhz Cordless phone antenna but lost lots of
Transmissions on VHF (148-174) UHF (406-512). After switching to scanner
antenna my reception improved on the bands mentioned above but decayed a
little on the 800Mhz band.
.
Give the scanner antenna a try...

> malex@kersur.net

I have also heard that it might be possible to crack certain encryption algorithms by obtaining a "known" encrypted phrase. If this is true, then cracking Mobile Data Terminals may not be as hard as once thought. Usually the programs on these terminals have pre-defined forms that the officer has to fill out when submitting a report or message. I can say that more than likely one of the fields that the officer must always enter is either his name, badge number, or patrol car number. Assuming this, one could capture the received packet with a scanner and a computer, figure out which portion of the encrypted packet contained information about the officer's name,badge number or car number (the date would probably be a good field to use also!). And try to reverse-decode this field against a list of names of the officers in the police department (or badge numbers, dates, etc.). Once the algorithm was determined, then all it would take would be a decryption software and a viewer for your P.C. Probably not a project that the average scannist would try but if it could be done then it would definitely be a marketable product. (That is if you don't piss off the Local Police, FBI,CIA,Secret Service in the process :)

>AFTER. Your best alternative is to buy the OS535, software and obtain
>unlock code.

That's all well and good, except that "mods" are not "available" in the customary sense, period. On the archives and BBS file areas, all you're going to find are those kinds of mods that involve "clip a diode"; "add a resistor"; or "slit a trace". Once in a rare while, something a little more involved gets posted and archived, but it is rare. And when it does happen, the sytax, grammar, and exactness of details are often left suffering.

It's a fact that the PRO-2004, PRO-2005, PRO-2006, PRO-2035, PRO-2042, PRO-43, PRO-34/37/39, and PRO-2022 and other scanners made by GRE-Japan (non-Uniden) are highly modifible scanners, but you don't find the information laying around in ASCII text files except for the one or two most basic of basic hacks.

The rest necessarily involve photographs, drawings, and other graphics, along with plenty of text, charts, tables, and sidebars that are necessary to communicate a complex idea and translate it to something that can be assimilated and applied by the lay person.

No one goes to that time, trouble, and expense without compensation, and so these materials will not be found in the public domain archives. A search for them there will prove quite unproductive, and could lead one to the conclusion that "mods are not available" when in fact, they really are......in a manner of speaking.

Moderators are only needed if we can't "Control" ourselves... Since we are
all adults
I would assume we are able to control our anger, frustration, etc..
.
If we can't then the moderator should be someone with knowledge but someone
without any grudges against any other people also people with grudges
against them would be bad for a moderator. That way he or she can be fair
toward all the people posting in this news group.
.
Personally I don't believe we need a moderator just self control.
.
Sorry for any spelling errors.

Hello Alan,

Due to my perception that there is a wide interest in your question
(dunno why, but it's apparently there <grin>), I will answer your
questions publicly.

Actually it is "Humphrey". No problem...

>Yesterday, I was down in the L.A. EOC (Emergency Operations Center)
>and noticed a large photograph in the hallway. It showed
>three yellow LAFD trucks: 3, 80, and 180. (180 is *BIG*!)
>Is this just an obsolete photo, or is there some story behind
>this? Did I miss an earlier explaination?

Doggone it Alan! My Office is there at the EOC...I encourage you or
others that ___have a security clearance___ to stop by and say hello.

To answer your question... As I recall, the earlier thread was specific
to "Engines" (emphasis added). The LAFD experimented in the early 1970's
with a couple of different colors on a handful of rigs. To this day, the
only Engine that is yellow is LAFD Engine 51 that is part of the primary
Crash-Fire-Rescue (CFR) complement at LAX.

We don't -technically- consider the remainder of the CFR rigs (Crash 80,
Foam 180,Foam 280,Foam 380 at LAX or Crash 90 at Van Nuys Airport) to be
Engines, per say. They all bear a yellow (or for the newer rigs a lime
green) paint scheme in response to an FAA edict for apparatus that is
jointly purchased with federal funds.

As well as CFR responsibilites, LAFD Engine 51 has primary response for
Fire and EMS runs in the busy LAX Terminal area. It is frequently seen
parked in front of terminals, causing many first-time visitors to LA to
think we have changed the color of our fleet.

>BTW, Brian, I (and I think I speak for many of us here) appreciate
>your participation in this group. The openness of the LAFD is
>to be commended, and should be a model for other public agencies.
>I think you are doing a great job.

Thank You. It is nice to be appreciated by such stalwart supporters of
the fire service as monitoring enthusiasts.

>Now if your management can just get their act together regarding
>your dispatching system... :-)

Yes, FCCS II is a nightmare (software and integration problems)...or was
ther some other aspect that was troubling to you.

alt.radio.scanner.flame_fest FAQ
09/05/1996
Rob Neff

For any of you that have frequented the rec.radio scanner newgroup, you know all to well the kind of crap-posts that are found there. Blatant jealousy, forgeries, mis-representations, misinformation and down-right rude/obnoxious/slanderous posts have become the norm. So, in an honest effort to move these types of messages away from a topic-specific newsgroup, I have created alt.radio.scanner.flame_fest...

This group is specificly for those kinds of posts, and open critiques of each others information, personal attacks and other scanner related (yet off topic) messages.

Please review these few tips while posting/reading to/from this group.

Obsenities:
Although sometimes difficult to put up with, it has become a social norm for people to use profanity as an integral part of their vocabulary. Posting a reply to a message simply because it contains profanity is both un-necessary and futile.

Forgeries:
Forgeries are a fact of internet/usenet life and must be watched for. Do not assume that a message's creator is the person listed in the header information or in the body itself. It has become very common for posters either seeking anonymity or chaos, to place the names of an innocent party in the header information to make readers beleive that someone other than they, sent the message. Most forged posts have content in high contrast to the real persons regular posting ettiquite and mannerisims, and may contradict a previous posting from the same user.
If an email address is discernable from the header information, and you are sceptical about the content of a post, e-mail that poster for verification before openly attacking them, to keep yourself one step ahead of the game.
If there isn't an email address, or is an anonymous account, feel free to respond in the open forum, as they have selected it by virtue.

Threats:
Any threats other than ones related to ISPs, legal action and personal obligation should not be tolerated! Such as *bodily harm* or anything

specific to possible harm to life and/or property. Any threat should be reported to the proper authorities, and not invited or egged into enactment.

****
*VOTE*VOTE*VOTE*VOTE*VOTE*VOTE*VOTE*VOTE*VOTE*
****

In the event there is a dispute, and both parties wish to have a vote taken of peers to settle a disagreement, one person, agreeable by both parties, should be selected to accept votes from peers in the group over a specific perod of time, and the results displayed for all to see. This result can either be argued or accepted, but is not to be considered the last word in a discussion unless agreed to by all warring factions.

****

Above all else, have fun. But remember that other are trying to do the same. The use of emoticons is fruitful in thwarting a wrong take on a message.

>Make sure you have a "brand new" nibbling tool. The case in back is
>steel.
> cheers
Yes it does require soldering but minimal. 4 wires total. There is no SMT soldering required. Also, no hole need to be drilled but you will need to cut a slot in the back panel. That is perhaps the most difficult part of the whole installation. The documentation is very good but READ THE FULL INSTRUCTIONS FIRST. It is always a good idea to do this. This will avoid the situations where you do one step, stop to read about the next step only to find out you had to do the second step within 5 seconds of doing the first!(This has happened to me on other tasks)
The only other problem is to find some decent software for the package.

Huh? My Yupi-MVT7100 does not have a gap between 550 and 760MHz.
It gets it ALL.

If there are any sex shops in your town you might check to see if any
of them use business band freqs. :-)

Heck, you might even check out a few savings & loan freqs!!! :-)

Thank you for the replies to my question of modifications to the 2035
scanner. I bought the unit on the spur of the moment because it was a
good buy. I'll do a little more homework before I buy another scanner.
I am quite pleased with the unit even without the cell ranges.
I may look into adding the OS535 board in the future.

Rich, , , this is an excellent answer. I agree with you 100%. My
only departure from the above is what you call "sensitive
frequencies". While it may be true that they change very often, I see
no harm in listing them. They ARE, after all paid for by you and I.
HOW a person uses them is a question of ethics, not whether they are
listed soemwhere or not. A wise old friend once said, , , , ,
"If the police don't want you to listen to them, MOVE!!"

Forget the signal splitter!

Spend a few bucks more and get yourself a good antenna SWITCHER instead. You can find these...which allow a radio to be switched to 2, 4 or more different antennas...at ham radio stores (do not use a CB model, as these are designed for lower frequencies and will exhibit significant loss when used at the higher frequencies received by your scanner.)

You should be able to get a good VHF/UHF 2-antenna splitter for less than $30. Less if you can find a local hamfest and go to their swap meet!

I saw all the posts and wondered if Radio Shack had learned any lessons from previous years in requiring you and me to buy their catalog.

The good news is I received my latest flier today and it had a note above the mailing address to alert me bring the flier to one of their stores and they would give me a free catalog.

Same as the old coupon deal they've offered before. Since we do post a lot of information about Radio Shack catalog items along with their catalog number, it is certainly to RS's advantage to give the catalogs away, one to a customer.

I'm sure they've been helped sales wise by post on this newsgroup and others. Limiting the catalogs to one per customer should save them money. But I don't think asking money for it is a good idea. Hope your fliers arrive soon before a RS flame war starts.

Regards,
LGS

>Bill
>
Bill,

Have you had any experience with the Dressler active antennas
(ARA-800, etc.) I had one mounted on top of the chimney and it was
MUCH better on all bands >50 MHz that the Grove Scantenna. The
problem: it really dropped off below 50 MHz.

I've moved, somehow the Dressler didn't make the move, and I'm looking
for the proverbial "all": I want all bands (30 - 900 will do), high
gain, omnidirectional. Gee. Wouldn't we all. ;)

Will a discone really beat an active in pulling in the weak signals,
across the dial, all things being equal?

thanks,
merc

3748. PRO-60 - Advice?

Newsgroup: rec.radio.scanner
Date: 1996-09-05 00:00:00 UTC
From: jgraf@wimsey.com
Message-ID: <322f5fd2.85887321@news.wimsey.com>
Source record: 224170

Local Radio Shack outlets in Vancouver, Canada, have a model PRO-60 on sale for C$320 (~US$235). I am looking for a scanner to use at Indycar races but know nothing about scanners.
The text of the ad says:

"features extended covrage, triple converson, AM/FM/FM wide mode and priority channel. With 100 channels per second search speed and 25 channels per second scanning speed. Frequency coverage: 30-512; 760-824; 849-869; 894-999.9875 MHz."

Can anyone give me comments on whether this will work for Indycar races and whether it is a good price. Radio Shack says the regular price is C$470 (~US$345), so it sounds ok.

Good point Bob. I have a number of uhf/vhf antennas here in the shack. I
use anything from
rg/58 on up. I certainly can't see a person using hardline or 9913 if all
they want are their
local emergency services which are in close proximity to the receiver site.
I can listen to
my local police, fire and such with a coat hanger stuck in the back of my
receiver. That
is why the scanner I use for that has nothing but a whip on it.

OTOH, if I am trying to hear/work a number of the Ham sats I certainly am
going to try and
reduce cable losses as much as possible. Same holds true when I am trying
to
catch stations far far away from here. Low loss coax and the antenna is as
high as possible.

Just my rambling opinion.............. Glenn

HD>Subject: Re: How do Images get made?

HD>>ccartee@cisco.com (Claude Alan Cartee) wrote:

HD>>>I was trying to figure out how images are created inside a scanner. I
HD>-------clip----------------

HD>bcheek@cts.com (Bill Cheek) wrote:

HD>>Image interference IS a problem for continuous coverage receivers, and
HD>>even in poorly designed triple conversion units where the L.O.
HD>>frequencies aren't carefully selected by the designer.

HD>Beyond putting thought into the strategic placement of local
HD>oscillator and IF frequencies during the design stages,
HD>you can't do much about the location of the mirror image 2 x I.F.
HD>regardless of what frequency it is.

HD>So what CAN be done ?

There are several ways it COULD be done: A higher first IF, even to the point of riding the LO on the high side (common in spectrum analyzers covering an enormous bandwidth); 10.7 MHz was an arbitrary frequency picked for FM BC receivers designed for the consumer electronics market many years ago. North American cellular telephones, wireless LAN RF units and RF sections of various PCSs use 45 to 400 MHz as the IF in single conversion. Two first mixers with a common LO but having a constant phase shift between LO injection ports can cancel images with 30 to 40 db extra attenuation, a very old (3 decades plus) technique. Filters in front of the first mixer or (if used) an RF stage CAN be added effectively in mass-production scanners if the cost impact is within the market target cost. Multiple conversion schemes are not a panacea in and of themselves; too many confuse sales/marketing claims for technical truth.

Pontification on what COULD be done ignores what the manufacturer tries to do: Make a reasonably-good receiver within a specific sell price in order to make a profit. Every single receiver ever built, every one since Armstrong's superheterodyne patent of 1918, is a _compromise_ of many factors. Expectation of perfection in performance is an unreasonable demand.

The modern "all-channel" TV set tuners and set-top box converters have used a mix of techniques, primarily up-conversion to a very high first IF and then down-conversion to get into the 40 to 70 MHz range. This technique works as well with broadband TV signals as it does in very

narrowband spectrum analyzers...and any bandwidth in between. However, the market for TV receivers is enormous while the market for scanners has always been relatively small; manufacturers are not going to spend lots of design time which cannot be amortized of a relatively small quantity off the production line.

HD>Quality radio equipment designers add tracking notch filters in the
HD>front-end tuned to the mirror image frequency (ie frequency + twice
HD>the IF...21.4 MHz) to attenuate the offending signal 60-70 db down or
HD>better.

I'm curious as to which receiver uses this technique? It's been done in industry and military electronics some time ago, but I wasn't aware it was used in consumer electronics.

HD>The other thing to note is that the IF image (opposite injection
HD>frequency) is used to our advantage in many scanner designs since the
HD>mixer sum is used for one band and the difference for another using
HD>the same local oscillator. ie..PRO-2004/5/6.
HD>So you don't necessarily want to permanently design in a high or
HD>lowpass filter (depending on whether low or highside injection is
HD>used).

Diode switching lets one do that switching at a current demand of, roughly, 5 mA total from the battery. Yaesu and Icom do that. For the handhelds, that's a compromise on battery drain. There's another problem with selectable sum/difference input: A "dead zone" frequency band which is roughly twice the first IF, centered on the first LO frequency. Since everyone DEMANDS every single Hertz from DC to daylight, that design is "unsatisfactory" (to use a polite phrase). :)

DM>>
DM>>In a pinch I made a dummy load for 900 MHz from about 150' of Radio
DM>>Shack RG-8 coax. It wasn't a perfect dummy load but it served the
DM>>purpose.

DM>Shoot, 150' of Tandy RG-58 would have been darn near a perfect
DM>dummy load and cost less.

In that case, the Radio Shack RG-58 is BETTER than specs for Mil cables.
My Times Wire and Cable catalog chart shows nominal loss for RG-58,
RG-58B to be 17.5 db per 100 feet at 1 GHz (10.0 db at 400 MHz); RG-58A,
RG-58C is 20.0 db/100 feet at 1 GHz (11.0 db at 400 MHz).

DM>Hint - a perfect dummy load would have a very large return loss.
DM>For a piece of coax terminated in an infinite SWR (either shorted
DM>or open), the return loss is twice the coax attenuation. So, if
DM>the coax has 15dB of attenuation, it has a return loss of 30dB which
DM>gives an SWR of about 1.06:1. Shoot, that's pretty good for a dummy
DM>load.

That's a good trick for achieving a dummy load. It's also an indication
that coax loss can hide a bad connection up at the antenna, even if the
line is swept with a network analyzer down at the receiver end.

On the usual slamming of Tandy Corporation: You guys would bitch about
high prices even if Radio Shack resold Andrew rigid, pressurized coax
for less than a buck a foot! Give it a REST...

JP>for these frequencies?

Nobody is restricted to Radio Shack to purchase coaxial cable. Belden 9913 and 9914 can be ordered through a local Newark Electronics outlet. Depending on the length (100' min.), it runs a dollar a foot there. There are a great number of electronics product manufacturers with web sites now and those can offer addresses of distributors and reps (I don't have full Internet access so don't have the huge list).

For a catalog, call voice to 1-800-298-3133, ext. 48, and ask for one; the catalog has four pages of Newark locations, including some international. Newark will take Visa and MasterCard on phone orders. They've been in business as long as the old Allied Radio (now a part of Tandy) in Chicago.

Recently there's been some discussion of the hazards to commercial aircraft from the use of scanners while in flight. The latest edition of IEEE Spectrum (September 1996) includes an article that addresses the technical aspects of the issue. The author calls for additional government restrictions of on-board operation of all types of electronic equipment. An anecdote in the article described a January 1993 incident where a flight lost all directional gyros until twenty-five radios (all listening to a popular football game) were turned off. The gyros then returned to the correct heading.

Additional information on this topic can be found at http://www-afo.arc.nasa.gov/ASRS/ASRS.html.

The following is the abstract from the IEEE Spectrum web page:

Do portable electronics endanger flight?

By Tekla S. Perry & Linda Geppert

Do portable electronic devices--laptop computers, hand-held video games, portable CD players, and more--belong on an airplane? Or is passenger safety threatened by the RF signals they unintentionally emit? A new report finds reason to tighten the rules.

** Rich, , , this is an excellent answer. I agree with you 100%. My
** only departure from the above is what you call "sensitive
** frequencies". While it may be true that they change very often, I see
** no harm in listing them. They ARE, after all paid for by you and I.
** HOW a person uses them is a question of ethics, not whether they are
** listed soemwhere or not. A wise old friend once said, , , , ,
** "If the police don't want you to listen to them, MOVE!!"
**
** Dr Pepper
** 10 - 2 - 4

Regarding "Sensitive" freqs... I don't have a problem with anyone
listening to them, only that I will agree to not print a freq used for
certian surveillence type traffic if specificly asked by the user, and if
it does not appear in FCC license info. Since police agencies are
authorized on a host of freqs without need of license, this policy has
allowed me to acquire good info from departments, and keep them happy. In
my ScannerMaster IL Communications Guide, there were 3 such freqs, and 2
of them are no longer used.

I bought one and thought the craftmenship was non-existent. They get the long time by tweaking a pot in the radio. Viking actually drills a hole in the tape recorder to do this, instead of opening it up to tweak it. Mine had plastic rattling around in it, probably from drilling the hole. I returned it and fortunately got my money back. The recorder was made in Korea I believe.

3767. A *VERY* SCARY SCENARIO

Newsgroup: rec.radio.scanner
Date: 1996-09-05 00:00:00 UTC
From: Patrick Cook <pcook@dimensional.com>
Message-ID: <Pine.SUN.3.95.960905210142.4404A-100000@nova.dimensional.com>
Source record: 224189
Cross-posted to: rec.radio.amateur.misc,rec.radio.scanner

Hello everyone:

I just got off the phone with my mom, who's a home-shopper turned scanner-buff, and what she described to me (IF this indeed happened the way she described it to me is EXACTLY what happened).

From what she told me, this is what happened. Keep in mind that I know NOTHING of the particulars of this incident other than what she told me:

There's an automobile accident at Colfax and Osage (here in Denver, Colorado). As a result, EMS personnel are dispatched to the scene (When I refer to EMS personnel, this covers police, fire, and paramedics unless otherwise noted). This call goes out over EVERY scanner in the area to ANYONE with a scanner in their hands. EMS people arrive on the scene and do their thing.

What caught my mom's (and later mine) ears was when some Fire Department personnel said (again according to her accounts of this incident) something like "There are too many hams listening to us. Switch to Channel 2" (or whatever channel they went to for simplex, on-scene communications).

What's so scary about it, you say??

Think about it. Why would *ANY* EMS person want to switch to another channel because "there are too many hams around"??? After thinking about it, it occured to me that there were either some nosy scanner buffs (who were NOT hams) around who were doing things they weren't supposed to (such as getting in the way), or there were *indeed* some hams who went into "scanner-buff" mode and FORGOT TO BE AT LEAST SEMI-PROFESSIONAL BY *YIELDING* TO THESE PEOPLE _SO THEY CAN *DO THEIR JOBS*_!!!!!

If the former was the case, then whether they realize it or not, THEY ARE GIVING US HAMS A BAD NAME!!! If the LATTER is true, then we need to do some SERIOUS re-training as to what IS and IS *NOT* allowed while watching rescue operations.

I say this because there IS a difference and that difference is one that has to do with LIFE AND DEATH!!! In other words, by watching from a distance and NOT interfering with these people and their abilities to do their jobs CAN make the difference between someone LIVING and someone DYING!!!!

Now, of course, it *is* possible that some hams either were involved in the accident ITSELF or *WITNESSED* the accident. This happens, BUT in either case, there *IS* a difference between a ham BEING INVOLVED (either as a victim or a witness) and being just an average, ordinary person who simply has nothing better to do than to give EMS personnel a hard time and

giving ham radio a BAD name in the process.

I think we sometimes need to remind ourselves that there are some hams who are having to fight "anti-scanner" laws EVERY DAY!!! In fact, someone can correct me if I'm wrong, but Greg Godsey from Christain County, KY, is STILL fighting to keep *HIS* _LICENSE_!!!

And I know that MANY scanner clubs (such as Mountain NewsNet) have STRICT policies regarding members approaching EMS personnel OR interfering IN ANY WAY with their abilities to do their jobs (INCLUDING TO, BUT NOT LIMITED TO approaching the automobiles involved).

PLEASE DO NOT GET ME WRONG!!! I like watching EMS rescue operations just as much (if not more so :)) than you do, BUT when *I* watch EMS personnel, *I* do so from a distance where I can get a clue as to what is going on *WITHOUT* getting too close to the point where I actually *INTERFERE* with said rescue operations.

THAT is how it is *SUPPOSED* to be done!!!

As far as promoting ham radio goes (which is why the Fire Department publicly complained about hams being around in the first place), it be noted that MANY public safety agencies around the country (i.e. the hams who happen to work in this field) have put up repeaters (such as the California Highway Patrol's 2 meter [?] repeater).

Here in the Denver Area, the hams who work in the Denver Police Department have put up a repeater on 147.300 Mhz. (+) (K0LF/R) (No PL needed). I'm sure that other public safety agencies around the country have done something similar.

Now that we have their trust: LET'S *NOT* _ABUSE_ IT!!!! We all know what happens when we abuse things in this hobby.

In short, SCANNER MONITORING SHOULD BE A HOBBY---NOT AN OBSESSION OR REASON TO DO SOMETHING AS STUPID AS INTERFERING WITH EMS PERSONNEL IN THEIR EFFORTS TO *SAVE LIVES*!!! Because the next life they have to save could be *YOURS*!!!!

Rob (moderator for aresco), I know I'm ranting, but I think it's worth it considering the fact there MAY have been some hams who MAY have done the Amateur Radio Service (as well as themselves) a DISservice, IMHO (especially with the "Little LEO" folks and other commercialized SIGs breathing down our necks and salivating just to get just a piece of our PRECIOUS bands)!!!

Sincerely,

Patrick Cook, KB0OXD
Denver, Colorado

Just as an FYI from Texas: The last three RS stores i've been in the last week all had catalogues in point-of-purchase displays free for the taking. One was a franchise store and the other two were corporate. No problems as long as the supply lasts.

))))))))))))))))

Don't have any answers for you but can tell you from experience that the tekkies who work on RS products generally don't give a flip as to whether you've modded or not (especially in the case of a simple, clipped diode). Past performance, however, is not indicative of future performance. But if it bugs you, send it in. From what my RS store manager says, they don't have time to care. MOO.

I will be using 9913 or similar coax on my scanner antenna. How do I ground this type of coax?

When I put up my TV antennas I used RG6 and I used a grounding block from RS to ground the coax before it enters the house. The grounding block accepts F-56 connectors.

Since 9913 or similar coax uses PL-259 connectors how do I ground it before it comes into the house? Is there a grounding block made that accepts PL-259 connectors?

Mike

I mentioned this because it is not mentioned in the manual (at least
not mine). The key is only identified as the "shift" key used for
things like changing the audio mode. I think it would be better if the
key had a "." on it instead of a "-".

It is a misprint in my manual. The same diagram shows the word "Press"
with a line pointing to the "SRC" key.

> Happy Scanning Ron

I realize it is the "decimal" key now. It would have been nice if this
was pointed out in the manual. Nowhere did it say to press "460" "SFT"
"150". to enter the frequency. I thimk the "SFT" key should also have
a "." on it instead of a "-".

Try this. Program all your local law enforcment mutual aid frequencies
in a seperate bank. Next time you hear them switching to channel 7
start scanning that bank. You might also use another bank to put in
the frequencies of near by agencies (Sheriffs, other city police,
highway patrol, etc..).

Will Beachy wrote:

I have for sale a very clean Pro 2022 base/mobile receiver. It has 200 channels (10/20). It also has full celluar mod done and also a speed mod for search and scan (replaced xtal oscillator). Has two new front knobs, new feet, and new antenna from Tandy Natl Parts. Also comes with manual, external speaker, and AC adapter. VL/A/VH/U/8. Also has very nicely repainted case (gloss black, quality job).

$150.00 for everything COD... I'll pay shipping

If you live in the SF Bay Area I'll drive half way..

From: wessel@via.nl
Message-ID: <50m5j8$mib@news.via.nl>
Source record: 224200

Hello all,

This may not be *quite* the right group, but is as close as I thought I'd get.

Is there anyone who has the IC-R7100 who can tell me about how it performs in practice? Things like selectivity, strong-signal behaviour and such are hard to read from a leaflet.

And what about the 25 MHz - 2000 MHz range, which is only guaranteed between 25-1000 and 1240-1300 MHz? What does it do in the remainder of the range?

Did anyone tie it up to a Scout?

E-mail would be fine. But please do use the group if we can all learn from it.

Groetjes,

Bart.

The only way to actually restore the cellular frequencies to allow keyboard entry is replace the Main CPU with the one that was used here in the UK, Europe and elsewhere.

The Opto 535 board will also allow full cellular coverage altough you have to have the receiver hooked uop to a PC for this.

Bill, you were resistant to the idea when you thought that *this* group
would become moderated. You then accused Tim of all sorts of underhanded
shennigans even though you were unclear about what he was proposing.
>
> Don't wonder. Such is the very essence of which moderated
> forums are made. Mackey and Duff will attest to that.
>
> >For those of you that felt perhaps moderation was a good thing, I'm sorry.
> >Perhaps someday things will change for the better. I doubt it though...

Moderation of a newsgroup is a good thing if it eliminates having to shift
throughs post that have nothing to do with scanning. If that was your
purpose, it was a worthwhile thing to attempt.
>
> Separatism. That's what it's all about, and only furthers

> Luke", suave, debonaire, sophisticated demeanor has given
> it.

I disagree with the assertion that Tim has been anything but above board.
The guy made a worthwhile effort to set up a new newsgroup by following
all of the basic guidelines, and further asked for public discourse on the
matter. I don't see how that makes him a phony! Your characterization is
counter to the facts.

> Why? Because you couldn't drum up a new congregation? If
> that's not it, then stuff a sock in it and go right on
> playing the game as YOU feel is right and proper for YOU.
> And lay off me and everyone else with whom you violently
> disagree. Just live up to your rules and leave me to live
> mine; Mackey to his; Duff to hers; and whomever else wishes
> to participate in their preferred styles.

If the consequence of people "participating in their preferred styles" is
that others (like Tim) feel compelled to leave the newsgroup, then before

long all we'll have here is "style" and no substance.

Correct me if I'm wrong (I tend to pass up the flame messages because they are a waste of time), but isn't the subject of moderating this newgroups the result of an imature flame war between Mackey and Cheeks? If so, then making either of them the moderater of this newsgroup is just defeating the purpose of having a moderater.

If either of them had the stuff it takes to be a moderater we wouldn't be looking for a moderater in the first place.

I suspect that most of the people reading this newgroups are only looking to trade information on radio scanning.

Mike,
I believe you may have entered the frequency incorrectly. Instead
of "460150", you should have entered "460.150" (note the decimal point).
However, you thought you were pushing the SFT key, when in actuality
you *were* pushing the decimal point key. In the long run, you were
doing this correctly, just not for the reason you thought.

Happy Scanning Ron

The install takes under two hours even if you go slowly. Nibbling out the back (which is NOT steel but aluminum) takes most of the time.

You can use the interface unless it is hooked up to the PC. In other words, your scanner operates as it would without the interface.

Not sure I understand your question about "controlling the CTCSS" but the codes are displayed on screen (as are DTMF).

The interface does not auto program the scanner (which would be a great feature).

Banks in the scanner are unchanged. However, all of the available software gives you the option of setting up any number of banks in any way you would like.

>like to hear from you. I have an older list, but doesn't always match
>what I'm hearing now.

Odds are they're at least close to what I hear out here in Alberta. Try this:

10-1 poor reception
10-2 ok reception
10-4 affirmative
10-6 busy, occupied, etc
10-7 off-duty
10-8 on-duty
10-9 say again
10-10 negatve
10-11 traffic stop (used to be on-duty)
10-12 stand by
10-17 (used to be enroute)
10-18 (used to be urgent)
10-20 location
10-21 phone call
10-22 disregard
10-23 on-scene
10-27 operators license check
10-28 vehicle license check
10-29 CPIC/CNI check
10-30 cautionary code: suspect V (violent), F (firearms), S (suicidal),
A (alcohol), D (drugs)
10-33 ofcr down
10-34 time is __
10-36 on duty (used to be sexual assault) (?)
10-38 fatality
10-46 subject suspended, code F (firearms) D (driving) A (alcohol)
10-61 unknown unit, please identify
10-62 are you secure?
10-63 towtruck
10-64 ambulance
10-70 are you ok?
10-71 complaint
10-72 bank alarm
10-73 other alarm
10-74 alarm is false

10-75 meal break
10-76 on portable
10-77 at (ofcr's) residence
10-78 at detachment

Car numbers - the first digit is the zone of operation. Second 'digit' (the letter) is the type of car. (A - rural patrol, B - municipal/town, C - highway patrol, D - detectives/GIS, E - special unit, F - radio tech?, G - freeway patrol, H - helicopter, Z - command/tactical unit), and then the car number. For example the car 2C5 is one of the highway patrol units out of Cochrane, Alberta (but not the 5th one).. and 2A20 is Cochrane's rural unit.

If the new central dispatch system you hear is anything like the one used here, you'll hear a burst of data and then a 795 Hz tone, and then the dispatcher will come up after a moment on a full-duplex open-repeater transmission. This data and tone is called RTTing by the units and I can guess it's meant as Request to Transmit.. all of the dispatches for the southern half of the province are done from Red Deer, in the center of Alberta, and in order to get to dispatch, the cars have to request the repeater be enabled. Normally they sit on a regular, repeated frequency, but in order to contact dispatch, it naturally has to be lengthened. The burst of data identifies the car/portable/whatever. Vehicles can be "programmed" to be anything the officer wants them to be. That's what the 10-61 code is for. Sometimes a repaired radio/car will come up 'blank' and the dispatcher basically says so on the air ("10-61, Red Deer Control 40"). Then the officer and the dispatcher go through this little tango of having to configure the radio on-air. :)

At least that's my take on it all.. :)

: Unfortunately, that is not universal. I went in to buy a repeater
: atlas, and asked for a catalog. I was charged full price for the
: catalog. As the saying goes, it's not the money-it's the principle of
: the thing. After all the money I've spent at Rat Shack over the last
: 25-odd years, I should not have to pay for a catalog-especially since I
: use it to obtain stock numbers to help the salesmen out. How about your
: views? send them to Radio Shack:

: rs.customer.relations@tandy.com

: Otherwise, expect a hard line approach to catalogs in the future by the
: salespersons (NO Exceptions to the fee) and higher fees.

I think it said 3 dollars of your <italics on> NEXT <italics off>
purchase. So what you have to do is buy the catalog first and then turn
around and buy the other stuff. Funny thing is that the salesman gave me
back the coupon sticker on the front, so I can use it again... Weird.

We have a west coast publication called Micro Times, and they used to
have a free magazine rack on most main streets. Then they found out that
the homeless people were grabbing them up for recycling, and they removed
most of the mag racks. Now I have to stop onto the Fry's or other
computer or electronics store to pick up a copy. For awhile the
earthlink ISP was distrib'ing their "AOL" type disks with the magazine,
so people were grabbing handfulls to get the disks.

: Thanks for everyone's help!

Take a look at

http://www.serve.com/ida/us9000.htm

I've got one, but haven't used it enough yet to say too much about it.

So far:

- I like the front panel and controls. This is pretty subjective, but
I usually don't need to refer to the manual often.

- The AM air band seems, again subjectively, pretty sensitive. I can
pull in some weak ground (AWOS, ASOS) signals from pretty far away.
Of course, antenna and terrain matter. I am pleased with this part
so far.

- I was disappointed about the sensitivity in the 2m band. My tiny
2m HT does WAY better, but then that's what it was designed to do,
while the scanner has wider coverage. I wish the scanner was a tad
better here, though. So I just use the HT when I need to pull in the
really weak stuff.

I think that a serious home scanner needs to have some sort of
computer interface/control to at least program the frequency memories.
I'll probably put the 9000 in a vehicle and get something later that
has the 'puter I/F.

If you have any other more specific questions, I can try to answer them.

I agree...it is amazing how much money and effort people will put into a receiver and antenna, only to connect it all with shitty coax that some dolt at Radio Shack sold them.

I finally decided to put 1/2 inch hardline on one of my setups and was absolutely amazed at the stuff I was hearing. I was picking up 800 MHz trunked systems from 50 to 75 miles away. My old range with RG-8 was about 20-25 miles.

Yes, the hardline is more expensive and the connectors are outrageous, but it is well worth it. I suggest everyone look into it if possible and practical.

I see a lot of groups like that. Groups are so easy to start that
many get started without a large group of folks to keep them going so they
just wither on the vine, so to speak. Groups also tend to exist for a
long time after everybody stops using them. Have you tried posting there?
Perhaps everybody is reading and nobody is posting.

Jim

3801. TRADE Icom R7000 for R7100

> just don't type in the quotation marks.
>
> FredL.

The info FredL gave is only to subscribe. Do not send messages to be distributed
to the LISTSERV address.
As it says in both the messages everyone receives when they subscribe.
messages intended for distribution to SCAN-L
subscribers go SCAN-L@UAFSYSB.UARK.EDU.

LISTSERV commands (subscribe, set SCAN-L digest, etc) go to
LISTSERV@UAFSYSB.UARK.EDU ...

And remember friends...
Scan-L is NOT a conduit for "Cheek bashing" or any other personal type attacks.

It would be nice if the bashing would go back to Fight-O Net.

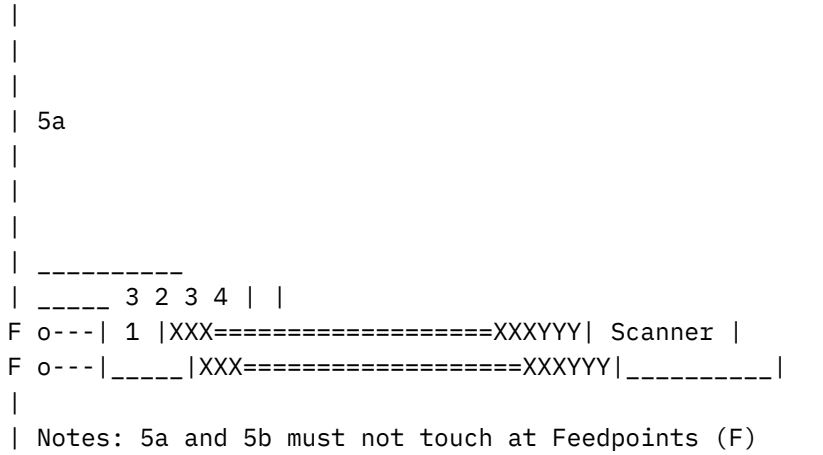
Home-Made Off-Center-Fed-Dipole Scanner Antenna
- By Bill Cheek

You need:

Item
No.
1 TV Matching Transformer (300-ohm to 75-ohm)
RS #15-1140, -1143, -1230, -1253
2 RG-6 Coax (You decide the length)
RS #278-1316, -1317, -1318
3 Gold Type F male connectors on each end of the RG-6
RS #278-225
4 Adapter, female Type F-to-male BNC
RS #278-251
5 Wire, copper tubing, aluminum tubing, etc; 2 sections
or pcs. 5a is 48" long 5b is 18" long



Notes: 5a and 5b must not touch at Feedpoints (F)

| All items are available at Radio SHack.
| 5b
|

Install it so it looks pretty much as shown, with the wires or tubing going straight up and down. The short end can be on top or bottom, as shown. Can be taped to a window or a wall. Best kept away from metal, though, especially anything its size or larger.

TECHNICAL QUESTIONS AND ANSWERS
==========

021: How do I restore cellular in my SnakeBite "XR-7715" ?

Forget it, pal. It ain't going to happen. The TDDRA
Act of 1994 expressly forbids the manufacture or
importation of "easily modified for cellular" scanners
after April, 1994. Manufacturers turned to putty and
removed the cellular programming from the scanners'
CPUs altogether. Sorry, it's not possible. But here
is a list of all those scanners of which I am aware
that are capable of cellular restoration:

PRO-2004 BC-855XLT *3 Regency 4030
PRO-2005 BC-200XLT Regency 1600
PRO-2006 BC-205XLT
PRO-2022 BC-760XLT *4
PRO-2026 *2 BC-700XLTA *4
PRO-2027 BC-890XLT *4
PRO-2030 BC-950XLT
PRO-2032 BC-2500XLT *3
PRO-34
PRO-37
PRO-39

PRO-43 *1
PRO-46 *2 *5
PRO-51 *2
PRO-23 *2

Note 1: Date of Mfg code 1A4, 2A4, xA3, xA2 (label in battery compment), or no "A" in the serial no.

Note 2: Date of mfg code 1A4, 2A4, -A3, -A2 (label on back).

Note 3: Date of mfg code must not end in the letter "D", except for OAID.

Note 4: Date of mfg code must not end in the letter "D".

Note 5: Units with date code of 5A4 can tune cellular in 30 kHz Steps using a keyboard entry sequence.

For instance, PRO-43's imported before March, 1994, are modifiable, while some brought in during March and all thereafter are impossible to modify. Date codes of any -A2 or -A3 and only 1A4 and 2A4 are assured of being modifiable. 3A4 and up probably aren't.

The above list does not include those scanners that were naturally capable of receiving the full 800 MHz band, without modification, some of which include:

J.I.L. SX-400 AOR-950 Icom R-7100
Regency MX-4000 AOR-1000 Icom R-1
Regency MX-5000 AOR-1500 Icom R-100
Kenwood RZ-1 AOR-2500 Icom R-9000
Uniden BC-800XLT AOR-3000 Icom R-7000
Yaesu FRG-9600 AOR-8000

Some of these radios, if still current, had the cellular removed by the factory after April, 1994.

==========
021a: Are any mods available for my "SnakeBite XR-7715"?

Shooooey, dude, you have the wrong impression about scanner modifications and hacking. Mods are not "available" in the sense that they can be found on a store shelf, or laying on the top of someone's mind who can tell you in so many words or less how to turn that "Snakebite" scanner into a fire-breathing, rip-snorting behemoth of a Turbowhopper. All scanners can be modified for something; generally a dozen or more things. But only a few scanners have anything written about them in detail. And you have to know where to LOOK. You can't just up and ask for them. It takes

me several days to several weeks and sometimes MONTHS
to work up and write about a hotshot mod for a decent
scanner, and after THAT level of effort, it's not
possible to make it "available" off the tip of my
fingertips. Continue reading below. There are
answers to your question.....

==========

022: Where can I find mods for my SnakeBite XR-7715?

You can't. There are only a handful of scanners ever
made that were worth solitary, focused research and
development, specifically for that scanner. Those
scanners include the following:

PRO-2004 PRO-2005 PRO-2006 PRO-2035 PRO-2042
PRO-2022 PRO-43 PRO-34 PRO-37 BC-200XLT
PRO-26 PRO-39 BC-3000

You may find occasional articles, files, and "mods"
expressly for other scanners not mentioned above, but
they are the exception to the rule. Start by looking
through the file section on my BBS (619) 578-9247, and
peruse quicklinks to other sites from my WWW HomePage:

http://ourworld.compuserve.com/homepages/bcheek

My BBS has hundreds of files on a wide array of radios
and you are welcome to peruse the list. My homepage
has quicklinks to hundreds of other sites that may contain
a file or two on your "Snakebite" scanner.

Now here is the problem: I am one of the few, if not
the ONLY engineer fully committed to scanner mods.

Yet, there are over 500 scanners on the historical list
now. It is physically impossible for me to dedicate
attention to any but a few, and I have to choose those
owned by the greatest numbers of people who will
support my efforts and enable me to pay the rent; put
food on the table; and educate the kids. That small
list of scanners above reaches out to tens or hundreds of
thousands of owners. There is no time left for me to work
on "SnakeBite" scanners that have very little to offer, even
after hours of hard work! But take cheer and read on.....

==========

023: So you mean there are no mods for my "SnakeBite"?

More or less I mean that, yes. But, that's not to say
it can't be modified. It can! It's just that there is
nothing published for it; nothing in the way of step-by
step instructions with graphics, photos, and details.

No one would go to the time and trouble, you see?

An engineer who is capable of designing super-hacks
for that "SnakeBite" scanner is not going to own one!
Instead, he will own one from the above list, one that
is eminently capable of some very powerful modifications
in the first place.

Now I said your "SnakeBite" can be hacked. It can.

But you are more or less on your own in the sense that
I cannot direct you to a "shopping list" of mods from
which you can pick and choose. There is no such list.
Any hope for you is to figure out what you want to do,
and ask me a specific question. I can tell you a few
answers in advance:

No.

No, your "SnakeBite" is not capable of cellular; extra
memory; additional bands of frequencies; and things of
that nature that pretty much require factory design in
the first place. (See ahead for Memory Modifications)

Yes.

Yes, your "SnakeBite" is probably capable of a few analog
modifications along these lines:

1. Tape Recorder Jack
2. Automatic Tape Recorder Switch (beats VOX!)
3. Extended Delay
4. Tone Decoder-Rejector Countermeasure
5. CTCSS mod
6. S-Meter
7. Scanner-to-Shortwave Interface
8. Carrier-On-Indicator
9. Audio Improvements
10. Beep volume or disable
11. Squelch Improvements
12. Remote Controller
13. Baseband audio outputs
14. Event Counter
15. Shielding of plastic cases
16. External DC power
17. Improved Adjacent Channel Rejection
18. Speed up of SCAN & SEARCH modes

Then, maybe...depending....on the scanner.... the following
digital and/or esoteric enhancements.....???

19. Interfacing to a computer
20. Subsidiary Carrier (SCA)
21. Extended Memory to 25,600-channels & up

22. Cellular restoration
23. 54-88 MHz restoration
24. Data/Tone/Noise Rejector

==========
024: So how can I do some of these mods?

That's a problem. No one has written them up for your "SnakeBite". About the only way I can think of is to get one or more of my three books and a subscription to the WORLD SCANNER REPORT. Research and study up on the mods we've developed for other scanners, and then compare the procedures for that specific scanner to your "Snakebite". Often, when I write up a mod, I give hints on how to apply it to other scanners.

Also, if you ask me specific questions, I can often give specific answers. If you ask me "how to do a memory mod", I'll just refer you to something already in print or published somewhere. If you are doing a memory mod and run into trouble, then I will help you with that trouble.

==========
025: Memory mods? How can I increase the programmable channels?

That depends on what kind of memory storage system is used by your scanner. There are three kinds:

1. On-board CPU RAM (Random Access Memory)
2. Static Random Access Memory (SRAM)
3. EEPROM Electrically Erasable Programmable Read Only Memory.

The first kind is most prevalent and there is no way to expand that kind of memory. It is, however, usually limited to scanners with 51 channels or less of programmable memory. 100-channels and up are usually done by methods 2 or 3. So your first step is to determine what kind of memory is used by your scanner.

EEPROM memory is expandable, but very difficult under most circumstances. SRAM is the easiest and offers the largest expansion capabilities. For example, the PRO-2004, PRO-2005, and PRO-2006 can be expanded to 25,600 programmable channels (and more)! The PRO-32, PRO-34, PRO-37, PRO-39 & PRO-2022 can go to 12,800-channels and beyond. The BC-760XLT, BC-560XLT, and a few others can be taken to 6,400 channels and more. The PRO-2035 and PRO-2042 can go to 16,000 channels and up.

My Extended Memory Modifications are amply documented in excruciating detail in my books and in the WORLD SCANNER REPORT, complete with diagrams, photos, and

many pages of instructions such that most casual
hobbyists who know a soldering iron from a tire iron
can do the work. This kind of mod is not suited to
being given out in an e-mail message in so many words
or less, so you will need to acquire the instructions
before doing the work.

==========
026: How do I tell a SRAM chip from an EEPROM from CPU RAM?

If you can't do this on your own or after the below
explanation, you are probably not a candidate for such
a wild adventure at this stage of your hacking career.

Most CPUs hold a small amount of RAM (random-access-
memory), sufficient to store anywhere from 10 to 50, maybe
a hundred channels or so. This is the case for most
scanners, so there is no way to increase that memory.
Fortunately, there are two other methods of RAM used by
a few scanners that offer possibilities for expansion.

EEPROM: The least common and least expansive is EEPROM
(electrically erasable programmable read-only-memory).
The PRO-43, BC-2500XLT, BC-200XLT, BC-100XLT and BC-3000XLT
use EEPROM programmable memory. It is possible to expand
EEPROM-type of memory, though not by such huge
proportions as the SRAM type. EEPROMs are usually tiny
little chips with 8-pins.

SRAM: A handful of scanners use a separate SRAM
(static random-access-memory) chip for storage of
frequencies and custom channel settings. It is this
type of memory that can be easily and economically
expanded by factors of 2, 4, 8, 16 and even 64 times
the original volume! Scanners known to employ SRAM
memory include the following:

PRO-2004 PRO-2021 PRO-32 BC-760XLT
PRO-2005 PRO-2022 PRO-34 BC-950XLT
PRO-2006 PRO-2032 PRO-37 BC-590XLT
PRO-2035 PRO-2042 PRO-39 BC-600XLT

There may well be other scanners that use SRAM memory,
but either I forgot about them or don't know. If
you're curious about your scanner's potential for
memory expansion, you can just about forget it for
those with fewer than 100-channels. The CPU's RAM
easily handles 10 to 100 channels or so. If your
scanner is not on the above list, but has 100 or more
channels, then look over its schematic diagram and
parts list or scrutinize its Logic/CPU Board for any of
the following types of SRAM chips:

uPD446G-15 TC-5517CF-20 LC-3517BM-15
CXK5864BP MB-8416-20LPF

or something similar, disregarding the last few digits and letters. A SRAM chip is generally characterized by a rectangular shape with 24 or more pins, each of the longest sides holding half the pins. An SRAM chip in a schematic diagram will be characterized by eighteen or more of its pins going straight to the CPU chip. Any chip with less than 24-pins is not likely to be an SRAM; neither is any chip in a square format. SRAMs are rectangular with 24 to 32 pins. Pinout notation of SRAM chips will include mystic codes such as:

A0, A1...A9, R/W, CE, I01, I02...I08, OE, etc.

==========
027: My "SnakeBite" scanner has an SRAM; how to do the mod?

Get the published instructions for Extended Memory Mods using larger SRAM chips. Start by reviewing the Table of Contents and Index to the World Scanner Report where you will find articles on memory mods. Get at least one of my books to supplement the WORLD SCANNER REPORT. The ULTIMATE SCANNER book is probably the best choice.

The Table of Contents and Index to the World Scanner Report can be found on my HomePage and FTP sites as well as on my BBS. They're also contained in my product information file: PRODINFO.ZIP that I can send by e-mail upon request.

Since all SRAM chips are much alike, my instructions for one scanner will apply to all, and not be that difficult to follow, provided you can find your SRAM chip in the first place.

==========
028: Do you do scanner modifications like memory mods?

Sure. Contact me privately and we can go from there.

==========
029: I'm not interested in all your mods - just one. Will you photocopy the information for me?

Sorry, no. My publishers own the copyright to my books and my company owns the copyrights to material published in the World Scanner Report. It would be unethical, illegal, or both, for me to do that.

If your budget is tight, you can in many cases get basic information for free from my BBS or from me via e-mail and the hard core stuff for $5/up by purchasing specific copies of the World Scanner Report. It is not

always necessary to buy my books in order to do the mods. On the other hand, my published mods are NOT the sort you find on most BBS's and Internet sites with a few sentences or paragraphs and maybe an ASCII drawing if you're lucky.

My mods are detailed; well documented; and have excellent graphics, including schematic diagrams, photos, and illustrations. This kind of work does not come for free and I make no bones about it. On the other hand, there is no charge if all you want is how to do simple mods like the cellular mod to the PRO-2006.

==========
030: So how do I restore cellular in the PRO-2006?

1. Remove the top cover of the scanner.
2. Look down inside the front panel behind the #3 key of the keyboard, and clip the exposed leads of the two coppery colored diodes standing on end. One restores cellular and the other gives a FREE 25% speedup of the SCAN function.
3. Replace top cover.

See, that's the kind of stuff I can provide for free. And I am happy to do so. I do not work for free for days on end, paying out of my pocket the high costs of photography, graphic arts, and computer operations with sweat dripping off my brow..... There is a difference.

If you don't believe it, then grab a few free files off my BBS and others, and some from the Internet..... and then invest five bucks in a copy of the World Scanner Report or one of my books.... See for yourself.

==========
031: How can I improve my reception capabilities?

Easy - maybe. Just increase the height of your antenna. Each 10-ft increment of added height can yield an apparent "gain" of 3-dB. For scanner signals, 3-dB of difference can be all the difference between excellent reception and none at all! There is no substitute for height of the antenna when trying to receive signals outside your immediate geographical area of more than a few miles. VHF and UHF signals weaken dramatically as they travel along the surface of the earth (ground-wave); much more so than the spacewave that travels a couple of wavelengths and more above the earth's surface. Low antenna heights intercept the spacewave of only very close transmitters, and the groundwave of all others. Yes, the quality and type of antenna makes

a difference to a station's reception capabilities, but
the single most important factor is the height of the
antenna, regardless of its quality and type.

==========
032: How can I install the military aero band in my scanner?

You can't, and that's that. If your scanner came with the
military aero band (220-400 MHz), then you're Fat City.
If it did not come with it, there is no way under the sun
of "restoring" it. You can't restore what ain't there.

==========
033: How can I modify my scanner to follow trunked systems?

You can't, and that's that. For one, it would be illegal
to do that according to the ECPA of 1986, but two, the
data formats and software of trunked radio systems are
proprietary and copyrighted by the manufacturer or
vendor and this information is not available to the
public, nor even to technical shops. Each trunked
system is as different as night and day with respect to
all other trunked systems, even from the same vendor. It
is possible for the astute hobbyist to gain some skill and
fortitude in following trunked system conversations. These
techniques are scattered around in various written works,
from books, magazine articles, and prefaces in frequency
directories...to text files on various BBS's and Internet
archives. These techniques, hints, tips, and kinks cannot
be recited here in so many words or less. One good starting
point might be the preface material in any recent edition
of Radio Shack's POLICE CALL books. But in a word, you
cannot alter your scanner to follow trunked signals.

==========
034: My PRO-2004 has problems, first mild and now severe. It
has been repaired several times. Can you fix it?

There is a distinct possibility this PRO-2004 has problems
with defective solder joints. Back in 1986, there was a
production run of the PRO-2004 manufactured with a defective
wave soldering machine. At first, it was only marginally
defective, but it worsened and degraded with time.

The result, by the time the malfunctioning machine was
discovered, was that many defective PRO-2004's had been shipped
to market. Some immediately failed within the warranty period
and were repaired or replaced. Others didn't fail until after
the warranty expired, and were either repaired or junked. Some
didn't fail for years.....

Failures appear to come in waves.....periodic rashes. Defective
solder joints are a serious problem, because the radio can be

fixed only to the extent that it is broken. Repaired solder joints today have no bearing or relationship to those headed for failure in a week, a month, or a year. There is no economical way to repair them all in one fell swoop. A PRO-2004 with defective solder joints is very likely to develop more problems with the passing of time. There can be no guarantees against subsequent related or unrelated failures.

With that in mind, yes I do such repairs, but I cannot guarantee that other failures won't occur. Costs of repair can be high, and I would estimate the first repair tag to be $100 plus return shipping. I know, it's a bum deal, but I can't do any better than that except to offer to buy the unit for my repair parts bin.

I pay $25 plus shipping for defective PRO-2004's in reasonably clean condition. (No basket cases....) You might consider this as an alternative to continued repair bills.

==========
035: Can my scanner be interfaced to a computer for remote and automated control, as well as for programming of the memory channels by the computer? Can the interface acquire data from the scanner and send it to the computer?

In a word, yes. Most scanners "can" be interfaced to a computer for one-way control and automated programming of the memory channels. It is probably not worth the effort and cost for most scanners, but it can be done. These scanners include:

PRO-2004 PRO-2005 PRO-2006 PRO-2035 PRO-2042 PRO-2022
PRO-34 PRO-37 PRO-39 PRO-43 PRO-26

Probably quite a few others are possible, but.......???

There are three scanners that are capable not only of the one-way mode of remote control and automated programming, but also of a "data acquisition" mode where the scanner sends its display (channel, frequency, bank, mode, delay, lockout) and other data to the computer for automated logging and data processing. These scanners are the PRO-2004, PRO-2005, and PRO-2006.

Several companies make scanner/computer interfaces, including:
Optoelectronics - Datametrics - COMMtronics Engineering

Each interface has its own unique characteristics, advantages, and limitations, but all are "good" in the sense of freeing the operator from much of the labor and drudgery of scanning. The Optoelectronics and Datametrics interfaces are generally limited to the PRO-2005/6 and PRO-2035/2042.

A "roll your own" computer interface was published in the World Scanner Report, V2N1-V2N6. Another more powerful one was published in my 3rd book, THE ULTIMATE SCANNER (Cheek3)

==========

That's it for now. I will keep this FAQ updated. If you see things that need to be added to it, by all means, let me know. If this FAQ fails to address your question(s), then hit me with 'em again, but be specific. And be detailed with symptoms and observations if you need tech support on mods or troubleshooting and diagnosis. Use e-mail if you can.

My word processor used the Greek micro, but it became an "m" in the conversion to ASCII text. Sensitivity is 1-uV (nominal), though it is much better than that in actuality...likely around 0.25-uV or so.

>Given there is no data given for selectivity or image rejection in

Please list the exact specs and parameters you want to see and I will do my best to obtain them.

> While Bill's review raves about "World Class" and gushes with excitement.
> ....How about some real facts not just a lot of marketing hype. :-(

>Peter, KD4CN

I did not report any specs because I did not know any specs. My article said "more to come." Did you not see that? I plan to report more information when I have more information.

You're an amateur radio operator (ham). That means intelligence. You can read. Therefore, I take umbrage with your unintelligent OR inflammatory allusion to "just a lot of marketing hype."

I used ONLY a few sentences to communicate my tentative and reserved "bubbling enthusiasm". And, as a hobbyist, I am well within my boundaries to use terms to describe what I think. As a journalist, I didn't stray into the hype turf. Why don't you re-read it to see exactly what I said. The very last paragraph of the article contained a wisp of a hint of marketing.

All the rest was "meat 'n taters". Not hype. Not marketing. When you task or criticize me, Mister Peter Amateur Radio Operator KD4CN, please make it based on FACT, TRUTH, and SUBSTANCE, and not the hype of your mind. If you challenge me from the hype of your mind, you

will receive mine in return. If you challenge on the bases of fact, truth, and substance, you'll receive that in return.

You made a defective choice to stray from fact, truth, and substance. The article is still in the queue where it speaks for itself. Dissect it, if you wish......or qualify your own hype.....or apologize.

That about echos my experience. I (sorry to say) worked for Radio Shack
a few years ago (but I could only take their sleasy tacktics for so long),
and they charged ME, as an exmployee, the $3.

Thanks for the email address of Tandy... they shall hear from me :)

Strikes me that,
..because someone has excellent technical knowledge, that does NOT necessarily mean they would be a good Moderator. An analogy would be the good salesman is made manager, but then fails. It's a different skill set. Selfishly, I'd rather have those with great technical knowledge spending time being productive in that arena, not reading every (damn) post for "suitability". My recommendation would be someone (or a group) who has a reasonable amount of scanner knowledge, enthusiasm about the topic, the time to Moderate, and the ability in a amicable way to keep things on topic. This is not to say controversy is off topic, but I think it is agreed flaming is.
Take care. JN

Far be it of me to put myself in such lofty company as Grove, Cheek or the guys at Tiare (whoever they are), most experts that I've talked to agree that DES has not been cracked, at least not in a way that makes it *feasible* in the real world. It is only a matter of time, however. I know some codecrackers in Israel (including Adi Shamir, one of the guys who came up with the RSA crypto algorithm) have demonstrated that it is possible to crack DES if, you are able to trick your opponent into encoding a phrase that you provide and then work backwards from that. Certainly, if you're a government agency willing to spend the money, you can build a computer using specially designed DES-cracking chips to do it (it wouldn't surprise me to learn that NSA has done that). However, that's not something you or I are going to buy any time soon.

Susan, I have attached a review by myself on the MR 8100 for your info.

MR8100 Scanner Review

by Ken Wyatt, WA6TTY

(Revised 9/5/96)

Overall: This is a well-built and laid out scanner which was designed with input from the California Highway Patrol. The enclosure is made with cast aluminum and there are numerous internal shields to isolate the various sections of the receiver. It covers all the usual public service (plus 800 MHz), aircraft, and government bands. The only exception is the military aircraft band (240-400 MHz). The radio is about the same physical size as other mobile scanners, but all the controls are mounted on what would be the normal "top" surface, leaving plenty of room for oversized controls, along with a large alphanumeric display. The radio includes 100 channels arranged in banks of 10 and the scan rate may be toggled between either 35 or 100 ch/s. The audio is clean, with three watts of power; adequate for the inside of a dump truck! The radio must be mounted against a flat panel or on top of a floor-mounted system and will not work for the typical under-dash configuration. The radio does not have a built-in speaker, but comes with a remotely-mounted one. Scanner World also supplies IBM-PC programming software (on 3 and 5.25 disks), along with an interface cable. {See note below}

Controls: The radio includes all the usual controls. Missing is a scan search/store feature and the capability to -not- delay a channel. The user may program frequencies, lock out channels, and manually step through programmed channels from the front panel controls.

Display: The display is a large (about) 20 character alphanumeric type with variable backlighting and contrast. It

displays the channel number, and either the frequency (to four significant digits) or a user-programmed alpha name (upper/lower case). Unfortunately, while the display indicates frequency out to four decimal places, the firmware only accepts three decimal places for PLL programming. Thus while you -think- the radio is tuned correctly to one of the "splinter" channels, it's not.

Computer I/O: Yes, this radio may be programmed via an RS-232 port! Software is included to program frequencies, name channels and banks, and set prioity channels (one per band). Scanner World supplied the wrong cable, but those who use the (typical) DB-9 connector (COM1), may simply purchase a "straight-through" 9-pin to 9-pin cable. The frequency (scan) list may then be stored and retrieved from disk. The cellular channels are unavailable via the front panel, but the software allows programming these if you enter the correct password, "ECPA1986"; would you believe! Connection of the scanner must be made to the COM1 port of your computer (not mentioned in the manual).

New MS Windows-based programming software is currently under development and preliminary copies may be obtained via AOL or CompuServe in their ham radio areas. The filename is "PSCAN.EXE". It's really slick!

Performance: The radio performs fairly well, overall. The sensitivity is on par with similar mobile scanners. The receiver IS susceptible to strong signals, such as paging transmitters. This results in an intermod problem where either paging tones will come through or signals will be received that you aren't tuned to. For me, this only occurs within large metropolitan areas, and only in places of high level rf energy. For example, within Colorado Springs, I have run into maybe five or six "bad" localities. At least 95% of the city is OK. As a first trial at solving this, I placed a variable step attenuator in line with the antenna. Usually clicking in 10-30 dB will do the trick, and doesn't impact reception of stations that much. I have also tried Grove's Scanner Filter and while I'm sure it would help if the receiver was overloaded by broadcast stations, it does little for the variety of paging transmitters in this area. The step attenuator seems to work the best and is what I'll use for my permanent installation. I wish the radio had a built-in attenuator like the PRO-200x series.

Summary: The scan rate of 100 ch/s is wonderful. I am usually able to catch the first syllable of a transmission, unless there is multiple traffic occuring. I don't know why one would wish to scan at it's lower rate. The audio is clean with plenty of punch. I find that permanently leaving 20 dB of attenuation between the antenna and radio gets rid of the bulk of intermod problems, while still allowing good reception. I like the fast scan rate and

having banks of 10 channels is really convenient if one travels
through different areas, or wishes to lock out complete services, etc.
I travel a lot, and find it very conveneient to be able to upload
a new set of frequencies/channel names every time I enter a new state.
I use my HP 100LS palmtop computer for this task; keeping a host of
frequency files loaded in memory.

Pluses: Good clean audio
100 channels in 10 banks
Fast 100 ch/s scan rate
Alphanumeric channel information
Large readable display
Programmable by computer
Ruggedly built

Minuses: Low-to-moderate problem with intermod
Only choice is a 2 second scan delay
Awkward mounting; no under-dash install. possible
No search and store capability
No military aircraft band

Available only from Scanner World, $289, plus $10 shipping.

NOTE: As of three years ago, Scanner World ran out of these.
Occassionally, they may be found used on rec.radio.forsale.

3816. Non-red Los Angeles fire trucks

Newsgroup: rec.radio.scanner
Date: 1996-09-05 00:00:00 UTC
From: frisbie@flying-disk.com
Message-ID: <1996Sep5.095421.945@flying-disk.com>
Source record: 224238

Unfortunately, my system only keeps items in rec.radio.scanner
for three days, so I cannot refer to prior postings. If I
get any details wrong, please let me know.

As I recall, Brian Humphries (did I spell that right?) said
that there was only one non-red truck in the Los Angeles
Fire Department.

Yesterday, I was down in the L.A. EOC (Emergency Operations Center)
and noticed a large photograph in the hallway. It showed
three yellow LAFD trucks: 3, 80, and 180. (180 is *BIG*!)
Is this just an obsolete photo, or is there some story behind
this? Did I miss an earlier explaination?

BTW, Brian, I (and I think I speak for many of us here) appreciate
your participation in this group. The openness of the LAFD is
to be commended, and should be a model for other public agencies.
I think you are doing a great job.

Now if your management can just get their act together regarding
your dispatching system... :-)

3817. RS Pro-29, yes or no ???

Newsgroup: rec.radio.scanner
Date: 1996-09-05 00:00:00 UTC
From: "Ron L." <Gate24@ix.netcom.com>
Message-ID: <322F0F52.7DD9@ix.netcom.com>
Source record: 224239

Hello,

Just found out that my local Radio Shack carries the Pro-29 with 60 channels and 800 mhz (cellular blocked) for $149. The sales person offered to convert it to full cellular for a few dollars more.

I am a newbie to the scanner world, but this sounds like a pretty good deal to me. What do you think ?? Any comments ???

I will check this post from time to time, but I would also appreciate e-mail.

Thanks,

Ron L.

>
> I'm looking for all the low band cordless phone frequencies as well as
> the 900mhz frequencies. Thank you in advance!

Want to listen to cordless phones?

(Get to really KNOW your neighbors!!)

Best antenna a whip or wire about 61" long

>>> Here is where you need to look <<<

46.610 - 46.990 MHz Portable Phones

The following channels are listed as BASE/HANDSET.

46.610/49.670 Channel 1
46.630/49.845 Channel 2
46.670/49.860 Channel 3
46.710/49.770 Channel 4
46.730/49.875 Channel 5
46.770/49.830 Channel 6 (Also Baby Monitors on 49.83)
46.830/49.890 Channel 7 (Also Baby Monitors on 49.89)
46.870/49.930 Channel 8
46.930/49.990 Channel 9□
46.970/49.970 Channel 10

For older phones like the DuoPhone 320's, here is where you look:

Channel # Handset TX Freq Base TX Freq

1A 49.83Mhz 1.69Mhz
7A 49.845Mhz 1.71Mhz
13A 49.860Mhz 1.73Mhz
19A 49.875Mhz 1.75Mhz
25A 49.890Mhz 1.77Mhz

Keep in mind that its using 49Mhz from the handset to the base
and 1Mhz from the base to the handset.

You may also find more by scanning from 49.8 to 49.9 and 1.6 to 1.8Mhz.
Scanning 46.61-46.99 may yield additional frequecies since the FCC has
approved additional channels to ease congestion.

Why is it a gross over simplication? I believe that this is actually true. If I, as a journalist, interview you and I write an article in which you slander Bill Cheek, the paper and I could be sued for libel. If your comments are reprinted in another publication, that publication could also be sued for libel. This sort of thing happens all of the time.

I'm not a lawyer, however and you would appear to know more about libel law than I do. What is it that the writer and I are missing in our limited understanding of libel law?

Brusletto <bruslet@rof.net> wrote:
>What is a frequency counter for?

Well, it does not count frequencies so maybe "frequency displayer"
is a better term but counter is the name it goes by.
It displays a frequency on a readout - it counts cycles of a signal
within some reference time ex: counting 49,250 cycles within 1ms
means 49,250,000 cycles in 1s which is 49.250MHz.
(Hz = Hertz = cps = cycle per second).

It would be used to measure what frequency a signal is - could be
via connections to a circuit for tuning or via antenna for RF.

The scanner crowd would use it to detect a local strong RF signal
and then use the frequency to tune the scanner manually or with
some automatic tuning connection like the Scout REACTION-TUNE.

I am not a lawer so bear with me. if you printed in the news paper
slander it would be you printing it. You have direct control over
what is printed. does not the Scan-l list simply redistribute what is
sent to it. no one is there to say completly what goes and what
stays.

3822. Antenna in the attic?

Newsgroup: rec.radio.scanner
Date: 1996-09-05 00:00:00 UTC
From: wood@nexus.aer.loral.com
Message-ID: <50n6kf$9vm@wdl1.wdl.lmco.com>
Source record: 224244

I'm just starting to get into scanning and am looking to get a
better antenna for use with my PRO-60 while I'm at home. I live
in a community that doesn't allow any type of antenna to be visible.
I'm, therefore, forced to either put it in the attic, or try to
disguise it as a piece of landscape or patio furniture.

I live approx 60 miles from downtown Los Angeles (in southern
Orange County) and can pick up very few LA frequencies. I upgraded
my scanner to the $9.95 RS collapsable antenna and it helped a little,
but I'd still like to pick up more LA freqs.

I've been thinking of getting the RS discone antenna and putting it
in the attic. Would that bring in more signals? I live is a shallow
canyon in the foothills, so I can't get a good line-of-site to LA.
Would a directional antenna be better since pretty much all signals
will be coming from the west (to the east is nat'l forest and mountains).

Any ideas would be appreciated. Also, does anyone know of any good
scanner stores in the LA/OC area?

Thanks in advance,
Bill Wood

Has anyone ever heard of this scanner or better yet have one.
I have one that I bought a few years ago. I have been very unhappy
with it from day one. The audio contains lots of hiss and background
noise. This problem remains even after using several differnt
antenna's. A search of Unidens web page does not even list this
model.
I sure would like to know if this is just a bad/poor design or
if perhaps I have a problem, that is the scanner has a problem
that can be repaired.
I am about ready to trash this scanner.

Any inputs comments advice, etc would be greatly appreciated

3825. Pro-2006 volume problem

Newsgroup: rec.radio.scanner
Date: 1996-09-05 00:00:00 UTC
From: merc@cris.com
Message-ID: <322db66c.12366583@news.concentric.net>
Source record: 224373

Strange problem - my 2006 scanner has had a volume drop that is
specific to the 800 MHz band. I have to turn the volume up
considerably higher that on other bands to reach the same volume.

Any ideas? I absolutely do not want to send it to RS for repair;
don't trust them to send it back with the 800 band still accessable.

thanks,
jeff

I have to agree, we should not have to have a moderator but this
flaming of Bill has gotten way out of hand. Bill has the knowledge
that would be required to moderate this group. He has shown great
control in all of the flames and that is another -plus- for him.

Again, I would had to see this moderated but if it has to be then Bill
is the one that can do it!

Hang in there Bill!

Do you have the WFM mode set for 800Mhz ops instead of NFM? Check the
display. This would explain the volume drop.

Steve

3829. Searching on 855xlt??

Newsgroup: rec.radio.scanner
Date: 1996-09-05 00:00:00 UTC
From: aa186@freenet.akron.oh.us
Message-ID: <Dx8M67.LE0@freenet.akron.oh.us>
Source record: 224377

I am considering a trade in which I would be getting a Uniden 855xlt scanner? Question: How do you search through frequencies with this unit? After much playing with a model at Best Buy, I couldn't get the search to activate? I got the word "search" to appear on the display screen but that is it. How do you do it? Is this just a band search like on other BC models?

Ideally I would like a search feature you can engage from whatever frequency you happen to be on (like the radio shack models have with the up and down arrows). I don't care for the uniden "band search" setup. Is that what the 855xlt has?

Thanks in advance.
Mike

Hello there.

I have a couple of questions regarding scanner modifications. I had my Pro-2022 recently modified for all band openings, but I can't seem to receive anything between 66-72 Mhz (as called for by one modification). Is my scanner missing something (like a mixer/osc) or was something done wrong?

Useful answers would be appreciated.

Eric.

>Rick Prelinger
>footage@well.com

Information given to me by a supervising Police Comm Trechnician whom I was interviewed by for a position in the Communications Division of NYPD, stated to me that these frequencies are supposed to go on line whenever the radio dispatch section of the 911 system moves into 11 MetroTech Plaza in Downtown Brooklyn. At that time, 25 division frequencies will become something like 37, thus necessitating the need to promote some 911 people from call taking to radio dispatch positions to account for the added dispatch consoles.
Presently, only 911 call takers are located at MetroTech where the E-911 system is in place. Thr radio section ("Central") is still located in horrendous conditions on the eighth floor of 1 Police Plaza.

> a BFO is provided to enhance tuning of SSB or CW signals in
> +/-5 Hz increments.

Tuning steps of 1khz is ok for a vhf scanner but not for a serious HF communications receiver. While not impossible to tune a strong SSB/CW/FSK signal it would be tedious. I'm not sure I would characterize a BFO as an enhancement for SSB / CW tuning but rather a requirement?

Given there is no data given for selectivity or image rejection in Bill's report, I would have conclude that what is being offered here is just another scanner except it uses a PC (not very portable) in place of a built in microprocessor for control.

While Bill's review raves about "World Class" and gushes with excitement. I would like to see more real specs on WinRadio. Yes, I've seen Win Radio's web page and it has nothing more than Bill posted. How about some real facts not just a lot of marketing hype. :-(

That's what I wonder? I can't believe this freakin' idiot
EXPECTS me or ANYONE to sit down and write him a litany of
the dozens of things that can be done to most any scanner.

It's rather presumptious and rude to ask for "all mods" to
such and such a scanner anyway. Some of 'em take pages and
pages to describe and if the rascal ain't interested in some
of 'em whatever reason, then it's a waste of time and
bandwidth to snow in the first place. Why can't he just
figure out what his scanner doesn't do that he wants it to
do and then ask. Geezus Hortense Kriste!!!! :-)

>All I see is Bill
>pointing out that there are several mods. Have you checked out his web

This works, I did it and have already received $682.00 in the past week.
****
Hello! I've got some awesome news that I think you need to take two minutes to read if you have ever thought "How could I make some serious cash in a hurry???" , or been in serious debt, ready to do almost anything to get the money needed to pay off those bill collectors. So grab a snack, a warm cup of coffee, or a glass of your favorite beverage, get comfortable and listen to this interesting, exciting find!
Let me start by saying that I FINALLY FOUND IT! That's right!. I found it! And I HATE GET RICH QUICK SCHEMES!! I hate those schemes like multi-level marketing, mail-order schemes, envelope stuffing scams, 900 number scams... the list goes on forever. I have tried every darn get rich quick scheme out there over the past 12 years. I somehow got on mailing lists for people looking to make money (more like 'desperate stupid people who will try anything for money!'). Well, when I was a teenager, these claims to 'get me rich quick' sounded irresistible! I would shell out $14.95 here, $29.95 there, $24.95 here, and another $49.95 there. I had maxed out my new Circuit City Card AND my Visa...I was desperate for money!! So, I gave them all a chance but failed at every one of them! Maybe they worked for some people, but not for me. Eventually, I just tossed that JUNK MAIL in the trash when I got the mail. I recognized it right away. I can smell a money scam from a mile away these days, SO I THOUGHT....
I thought I could sniff out a scam easily. WAS I WRONG!! ....I LOVE THE INTERNET!!!

I was scanning thru a NEWSGROUP and saw an article stating to GET CASH FAST!! I thought..."Here on the Internet?? Well, I'll just have to see what schemes could possibly be on the internet." The article described a way to MAIL A ONE DOLLAR BILL TO ONLY FIVE PEOPLE AND MAKE $50, 0000 IN CASH WITHIN 4 WEEKS! Well, the more I thought about it, the more I became very curious. Why? Because of the way it worked AND BECAUSE IT WOULD ONLY COST ME FIVE DOLLARS (AND FIVE STAMPS), THAT'S ALL I EVER PAY....EVER!!

Ok, so the $50,000 in cash was maybe a tough amount to reach, but it was possible. I knew that I could at least get a return of $1,000 or so. So I did it!! As per the instructions in the article, I mailed out ('snail mail'for you e-mail fanatics) a single dollar bill to each of the five people on the list that was contained in the article. I included a small note, with the dollar, that stated "Please Add Me To Your List." I then removed the first position name of the five names listed and moved everyone up one position, and I put my name in

position five of the list. This is how the money starts rolling in! I then took this revised article now with my name on the list and REPOSTED IT ON AS MANY NEWSGROUPS AND LOCAL BULLETIN BOARD MESSAGE AREAS THAT I KNEW. I then waited to watch the money come in...prepared to maybe receive about $1000 to $1500 in cash or so.... But what a welcome surprise when those envelopes kept coming in!!! I knew what they were as soon as I saw the return addresses from people all over the world-Most from the U.S., but some from Canada, even some from Australia! I tell you, THAT WAS EXCITING!! So how much did I get in total return? $1000? $5000? Not even!!! I received a total of $23,343!!! I couldn't believe it!!

I now have a brand new black Acura Integra to speak for, due to this!! Now after almost 8 months, I am ready to do it again!!! So maybe it was possible to get $50,000 in cash, I don't know, but IT COMPLETELY DEPENDS ON YOU, THE INDIVIDUAL! You must follow through and repost this article everywhere you can think of! The more postings you achieve will determine how much cash will arrive in your very own mailbox!! It's just too easy to pass up!!!

Let's review the reasons why you should do this: The only cost factors are for the five stamps, the 5 envelopes and the 5 one dollar bills that you send out to the listed names by snail mail (US Postal Service Mail). Then just simply repost the article (WITH YOUR NAME ADDED) to all the newsgroups and local BBS's you can. Then sit back and, (ironically), enjoy walking (you can run if you like! :o) down your driveway to your mailbox and scoop up your rewards!! We all have five dollars to put into such an easy effortless investment with SPECTACULAR REALISTIC RETURNS OF $15,000 to $25,000 in about 3-5 weeks! So HOLD OFF ON THOSE LOTTERY NUMBERS FOR TODAY,EAT AT HOME TONIGHT INSTEAD OF TAKEOUT FROM McDONALDS AND INVEST FIVE DOLLARS IN THIS AMAZING MONEY MAKING SYSTEM NOW!!! YOU CAN'T LOSE!!

So how do you do it exactly, you ask? I have carefully provided the mostdetailed, yet straightforward instructions on how to easily get this underway and get your cash on its way. SO, ARE YOU READY TO MAKE SOME CASH!!!?? HERE WE GO!!!

*** THE LIST OF NAMES IS AT THE END OF THIS ARTICLE. ***

OK, Read this carefully. Get a printout of this information, if you like, so you can easily refer to it as often as needed.

INSTRUCTIONS:

1. Take a sheet of paper and write on it the following: "Please add my name to your list". This creates a service out of this money making system and thus making it completely legal. You are not just randomly sending a dollar to someone, you are paying one dollar for a legitimate service. Make sure you include your name and address. I assure you that, again, this is completely legal! For a neat little twist, also write what slot their name was in: "You were

in slot 3", Just to add a little fun! This is all about having fun and making money at the same time!

2. Now fold this sheet of paper around a dollar bill ,(no checks or money orders), and put them into an envelope and send it on its way to the five people listed. The folding of the paper around the bill will insure its arrival to its recipient. THIS STEP IS IMPORTANT!!

3. Now listen carefully, here's where you get YOUR MONEY COMING TO YOUR MAILBOX. Look at the list of five people; remove the first name from position one and move everyone on the list up slot one on the list. Position 2 name will now move to the position 1 slot , position 3 will now become position 2, 4 will be be 3, 5 wil be 4. Now put your name, address, zipcode AND COUNTRY in position 5, the bottom position on the list.

4. Now upload this updated file to as many newsgroups and local bulletin boards' message areas & file section as possible. Give a catchy description of the file so it gets noticed!! Such as: "NEED FAST CASH?, HERE IT IS!" or "NEED CASH TO PAY OFF YOUR DEBTS??", etc. And the more uploads, the more money you will make, and of course, the more money the others on the list will make too. LET'S ALL TAKE CARE OF EACH OTHER BY BEING HONEST AND BY PUTTING FORTH 120 PERCENT INTO THIS PROFITABLE & AMAZING SYSTEM!!! You'll reap the benefits, believe me!!! Set a goal for the number of total uploads you'll post, such as 15-20 postings or more! Always have a goal in mind!!! If you can UUE encode the file when uploading, that will make it easier for the people to receive it and have it downloaded to their hard drive. That way they get a copy of the article right on their computer without hassles of viewing and then saving the article from the File menu. Don't alter the file type, leave it as an MS-DOS Text file. The best test is to be able to view this file using Microsoft's Notepad for Windows 3.x or WordPad for Windows '95. If the margins look right without making the screen slide left or right when at the ends of the sentences, you're in business!

5. If you need help uploading, simply ask the sysop of the BBS, or "POST" a message on a newsgroup asking how to post a file, tell them who your Internet provider is and PEOPLE WILL ALWAYS BE GLAD TO HELP. I would try to describe how to do it but there are simply too many internet software packages with slightly different yet relatively simple ways to post or upload a file. Just ask for help or look in the help section for 'posting'. I do know that for GNN, you simply select 'POST' then enter a catchy description under the subject box, choose 'ATTACH', selecting 'UUE' and NOT 'TXT', then choose 'Browse' to go look for the file. Find your text file CASH.TXT and click on it and choose 'OK'. Place a one line statement in the main body section of the message post screen. Something like "Download this to read how to get cash arriving in your mailbox with no paybacks!" or whatever. Just make sure it represents its true feasibility, NOT something like..."Get one million dollars flooding in your mailbox in two days!"

You'll never get ANY responses!

6. And this is the step I like. JUST SIT BACK AND ENJOY LIFE BECAUSE CASH IS ON THE WAY!! Expect to see a little money start to trickle in around 2 weeks, but AT ABOUT WEEKS 3 & 4, THE MONEY STORM WILL HIT YOUR MAILBOX!! All you have to do is take it out of the mailbox and try not to scream too loud (outside anyway) when you realize YOU HIT THE BIG TIME AT LAST!!

7. So go PAY OFF YOUR BILLS AND DEBTS and then get that something special you always wanted or buy that special person in your life (or the one you want in your life) a gift they'll never forget. ENJOY LIFE!

8. Now when you get low on this money supply, simply re-activate this file again; Reposting it in the old places where you originally posted and possibly some new places you now know of. Don't ever lose this file, always keep a copy at your reach for when you ever need cash. THIS IS AN INCREDIBLE TOOL THAT YOU CAN ALWAYS RE-USE TIME AND TIME AGAIN WHEN CASH IS NEEDED!

9. (This step added by Charles Reiley). Hello, This is exciting, isn't it?! While I'm on the list, just add a note saying "Please include extra money tips" with your name & E-MAIL address, and I will (FOR FREE) send you some neat methods to increase the money you will receive with this plan. Why?... Why not? I'm not a selfish jerk...I like helping out others. E-mail just makes it a touch easier and cheaper, too! After I drop off the list, I can no longer offer you this advice, obviously, but maybe someone else who gets my tips will offer and simply replace my name on this step number 9. Good luck and give this plan your all, it will definitely pay off! Like Mike said, HAVE FUN WITH IT!!!

10. (This comment added by Mike Lorincz) Hell dude, this is great, just send the money and wait like 1 week, then all of a sudden, BOOOOOOM! Mail flood full of dollar bills. Hahahah its great

Are we talking about Sun, 8/25 or last weekend?

I was at the 8/25 game and there was no problem that I could see, but
I admit, that doesn't mean much..

In any case, if it was a drill at "Camp Snoopy" behind Dodger Stadium,
as one poster pointed out, then no one at the Stadium might have
noticed.

Stashing anything under the seat will likely get you in trouble. Maybe even shot in some locales. Atleast make it a semi-perm installation.
cheers

3849. Standard C 508 A - the REAL mini-scanner - Cell question.

Newsgroup: rec.radio.scanner
Date: 1996-09-06 00:00:00 UTC
From: dconti@carroll.com
Message-ID: <DxC0n7.5wv@news2.new-york.net>
Source record: 223997
Cross-posted to: alt.radio.scanner,rec.radio.scanner

Having been so busy lately, along with playing with some radios that are new releases, I haven't been able to play with my Standard C 508 A. However, in light of the current WELZ min scanner, I decided to take the C 508 A out of mothballs, and I continue to marvel at how this is truly the MINI SCANNER of choice for me! Not as much coverage as the WELZ, but PL capabilities, lockout, etc....with GREAT performance, and you can TX as well!

Will be interesting to see how the pending AOR AR 16 compares.

QUESTION : I decided to do the cell mod for the C 508 A, and I can now search throgu the cell band freqs in 30 Khz increments...BUT, it seems to be totally deaf there...I'm using the ANLI antenna, and other areas of the 800 band are fine. Any thoughts, experiences in this area?

Dan:
How hard was the mod to perform. The C508A is the best kept scanner
secret there is. Wish the scan rate was a little faster.

>
> Thanxx for any input given!!
Try taking the lower frequency, add or subtract the first IF frequency X
2, and that should be the image frequency:

824 + (First IF frequency X 2)
849 + (First IF frequency X 2)

OR:

824 - (First IF frequency X 2)
849 - (First IF frequency X 2)

Cheers!

Why do I find this hard to believe?.. I am sure you get a lot of people who interfere with your duties, but are you sure they are ALL "scanner junkies" just because they are there?.. have you actually seen scanners in these people's hands?.. I seem to remember other EMTs posting around here that they never have had this happen.

By the way, if my son had died in an auto accident, I would WANT to know RIGHT AWAY.

Typical scanner junkie/whacker point of view. They ALL think that they are "providing a service" with their meddling.

BELIEVE IT! I can't BEGIN to list the reasons why it is BAD for jerk-offs with scanners to make death notifications, or otherwise get involved with somebody else's business (police, fire, ems, etc.).

More to the point, the EMT's in question, whose statement about "...too many hams..." started this thread, were doubtless concerned about patient confidentiality and didn't want to broadcast sensitive information that they knew the legions of scanner-heads would hear. That they equate hams with other parasitic forms of radio-user life forms, such as the scanner-head, is a sad statement about the hams' current public image.

Yep, that's true. But that's because they have editors.

>Yes, Scan-L does redistribute what is sent to it. If it redistributed a
>libelous statement then the maintainer of that list could be sued as well
>as the person making the libelous statement. That's what was being
>threatened, I believe.

That was what was threatened, but the case law does not support it.
SCAN-L was NOT moderated. I could send a message to it and everyone would
get it, without the "maintainer's" intervention. That's why he can't be
sued. The case law supports this. Prodigy was found responsible for *all*
of the messages in their bulletin boards because they exercised some
modetorial (sp?) control over them. Sorry, don't remember the exact
case. But if they hadn't exercised moderation, then they wouldn't have
been liable.

>Yes, some one is there to say completely what goes and what stays--lists

I will be taking a rail vacation from Pittsburgh to Miami, (thru Philly). Train 40 (Broadway Limited)from Pittsburgh, connecting in Philly with Train 97 (Silver Meteor) to Miami.

Two questions;

1. Can anyone give me the radio frequencies that Amtrak would use on those runs, and;

2. Is there enough radio traffic to justify taking a scanner?

Thanks in adcance for your help!!!!!

Best regards,

Jim Osten

Hello !!!

Sorry for my english, I am spanish and can not manage very well.

I'm looking at getting a shortwave antenna for my ar8k, and have found
RF systems have some very well known antennas.
Does anybody work with Magnetic Longwire Balun from RF systems ???
Or perhaps with DX-10 ??
I think these are the most appropiate antennas I have found.

Please, I need as much information as possible.
Any info will be wellcome.

Thanks in advance.

I walked in and asked for a catalog . There were two salesman there. While salesman number one went for a catalog in the back room, the first salesman said they would have to add my name to the database to give me the catalog. The salesman with the catalog pointed to the $2.95 price on the cover and asked me for it. I said that I thought they were free. The first salesman told the second one to give it to me. The second salesman entered inventory data (NOT my name or address) in the POS terminal and gave me the catalog. I thanked them and walked out.

Strange!

> Thanxx for any input given!!
For the image frequency on the PRO-51, add 21.605 MHz. Thus, the range
of 824-849 MHz would have images from 845.605 to 870.605.

It's common practice for law enforcement etc. to use lesser known (often
non-repeater) channels when they have to give out names, phone numbers,
incident particulars and other specific info over the air that might be
inappropriately used by persons listening in with scanners. Maybe the
fire department personal used the term "ham" instead "nosey old women
with overly paranoid children" in the interest of community relations
(they've probably had sensitivity training).

From: engineer@ccnet.com
Message-ID: <50obgh$8ss_003@h98-160.ccnet.com>
Source record: 224029

Need a little bit of help here. I fly RC aircraft which operate in the 72Mhz band. We have been experencing some problems on several of the FCC assigned channels (I should note that we are secondary users in the band to everyone else). I am looking for a scanner that has included as part of the frequency range, the 72 Mhz band. As an added bonus, I am talking levels of -60 dBm and lower so a frequency doubler will not work and the harmonics are not strong enough to pick up with my BC200XLT.

Suggestions on new equipment, hand held?

Suggestions on older equipment that one might be able to find used?

Thanks in advance

Eric Helms

> How hard was the mod to perform. The C508A is the best kept scanner
> secret there is. Wish the scan rate was a little faster.Hi,yes the Standard C508 is the
best kept scanner secret.I had heard
that recently manufactured versions of the '508 were now "cell blocked"
I'm not sure if this actually refered to a "programming" block, as seen
in recent scanner models. Or maybe that programming of Cell CHs would
still occur,but that the CPU would not "load" any programming data in
the PLL syth,or possibly not logic selecting the 800 MHz rec band
filter.Try this: with a Cell band CH programmed in,look 23.05 MHz UP
from that freq using another receiver.Do you pick up the carrier of the
508's LO on the other radio? Also try Checking 46.1 MHz (23.05 x 2) up
from the Cell band,do you pick up Cell signals there??? Let me know what
you get.
508 tip: A great belt worn carry case for the 508 is the nylon web pouch
meant for the Motorola Minitor 2,much more unobtrusive than anything on
the Ham market

I've been scanning all mutual aid (fire & police), all county fire,
and county government channels with no sucess. I have also done this
with the surrounding counties and cities police and sheriffs. The
problem is one: They use this channel so very rarely, and two: I
have no more frequencies to try that I've not already identified.

As a 5 yr EMS worker, I cant even tell you how many times I have responded to MVA's or the like to find some scanner junkie/whacker A. telling me how to do my job or B.found that they have compromised crime scenes, endangered patients and basically caused more harm than good. This happen so regularly its not funny. As a scanner buff myself it bothers me to see these people pretending to be cops, medics or firefighters. The reason we switch frequencies is not so much the whackers as more for scene security, and also confidentiality. We actually had a fatal MVA a few years ago and the victims mother and father were notified by a party, who heard on their scanner their son was dead!!!!!! This is why we do it.....anyways, just thought I would add my 2 cents...Tom

Don,

If your local police department is on a trunked system, then the best way to monitor is to take the delay off of all the frequencies in the trunked system. Some areas split their trunked systems into geographical areas (For example Orange County, California). Orange County uses a trunked system for fire, but they actually have three seperate trunked systems (North, Metro and South) .. I might be wrong on the names since I don't live in Orange County so this is all by memory.

You best bet is to seperate the trunked systems on your scanner so that your only monitoring what you want to monitor (less confusion this way).

Since there are no local trunked systems in my area maybe I can refer you to someone who should have more information listening to them. Bill Cheeks is from San Diego and if I remember correctly most (if not all of San Diego's government is on a trunked system). Just make sure you ask precice questions from Bill, other wise you'll get 90% (Why don't you be more specific and %10 answer).

Bottom line is, if you want to monitor a trunked system you need to take all the delays off.

Oh, one other thing .. trunked systems use one of the freqs as a control freq and that can change several times a day .. first thing to do is to scan the entire trunked system until you hear a painfully auwful sound similar to a computer carrier .. once you find that make sure you lock it out, but remember that they can change the frequency of the control channel so you will have to do this every time you turn your scanner on.

Take care and happy scanning!

I have a like new Kenwood RZ-1 wide band receiver for sale for trade.

Coverage is continuous from 500khz to 905mhz, no gaps, full cellular.
100 memory channels with frequency or alpha tag.
Keyboard entry of frequency.
Modes are AM, NFM, WFM.
Different scan modes, seek, carrier, time, audio.
Steps in 5khz, 12.5khz, 25khz.
Stero FM line out jacks on rear panel.
Composite video output rear panel.
Dual antenna inputs, select 1, 1 or both antennas
Built in switchable attenuator.

Price is $350 plus shipping. Will consider trades on:

PRO2006, PRO2035, PRO2042, AOR2700, AOR8000, BC760.

tnx

Hurst Laviana (Eagle) wrote:

> Has anybody got military aircraft frequencies for the Wichita, Kansas, area?
>
> We are trying to hear McConnell AFB, the Kansas Air National Guard and
> the B1-Bs flying overhead.

Try the following:

301.6 MHz McConnell AFB Operations
303.0 MHz McConnell AFB Tactical
375.2 MHz McConnell AFB Meteorological Staff

My list is dated as I've not done much milair monitoring in a year or so. I hope this helps.

I've heard all of these frequencies regularly in the past from my location.

Phil Johnston
Springfield, Missouri

PS -- If you've not listened to milair before, you are in for a pleasant surprise. I regularly heard activity on more than 200 UHF (225-400 MHz) channels. The air refueling channels were the most active ... most active were 327.6, 235.1, 305.5, and 260.2 MHz.

Charging for their catalog may have been a good short term decision, but cannot help in the long run. I
used to keep the RS catalog almost as a reference manual. When I needed something like a part or a cable I
would first look it up in the catalog and then drop by the RS. Now, since I do not know exactly what I am
looking for I am just as likely to drop by a nearby local home center or discount store and see if they
have something that will meet my need. Often as not, if the item is commonly used, they do. RS loses.

Check out these US Supreme Court cases regarding the
First Amendment:

Garrison v Louisiana, 379 U.S. 64 (1964) "...even if he did
speak out of hatred, utterances honestly believed contribute
to the free interchange of ideas and the ascertainment of
truth."

FCC v Pacifica Foundation, 438 U.S. 726 (1978) "...if it is
the speakers opinion that gives offense, that consequence is
a reason for according it constitutional protection. For it
is a central tenet of the First Amendment that the
government must remain neutral in the marketplace of ideas."

It could be argued that USSN's officers can be
considered as "public figures", since they have placed
themselves voluntarily in that position. If so, the
precedent in Fallwell v Flynt, 797 F.2d 1270 (CA4 1986)
might also apply to this case. In that case, the U.S. Court
of Appeals for the Fourth Circuit mentioned an "actual
malice" test for false statements to be actionable.

There are other decisions that I cannot locate as
quickly holding that a publisher is not liable for false
statements unless they are aware that the statements are

false and/or act with reckless disregard for the truth. To even begin to argue that aspect, the plaintiff first has to prove that the actual statements are false. No publisher is liable for distributing true statements as news, even if USSN would rather the public not know what's going on.

These whackos persuing accident/crime scenes deserve to be arrested or at the least detained by police. Anyone willingly interfering with public safety operations are in the same category as criminals themselves.

Perhaps having these individuals grilled over by a psychiatrist and then having this on a police record would help change their disruptive attitudes. It sure would affect their employment opportunities during a background check.

Those individuals are nothing more than gawkers. Unfortunately they give the rest of us a bad reputation.

I have a Pro 2026 mobile scanner that is an "A" code. This means it doesn't have the built in cable but a DC jack (allows for home use). The manufacture date code is 11A3--which means that this is the most desirable version of this scanner. Please note that the "B" code version is not cell modifiable.

Item is new..from RS and is still in the original box, and is a VIRGIN in terms of modifications! You do the mod yourself or I'll do it for you. You be the judge.

Asking price is $180 firm.

I am not making any money off of this puppy, I am just providing a service to those who wish to have a non-ECPA enforced scanner.

Disclaimer: LISTENING TO CELL CONVERSATIONS IS ILLEGAL IN THE 50 UNITED STATES! I am not responsible if you get busted.

Note: I also have a Uniden Bearcat BC200XLT handheld, used, in pristine condition, cell modifiable with original case. Price is $120 firm.

Shipping is ~$8.00 UPS GROUND.

Alright then, "useful".
There are obviously several classes of modifications, from a simple
clip of a resistor, to practically building the whole radio.
If I am looking for the former, then the free, instantanous access
to the oakland ftp repository is great!
For bigger projects, other sources are the way to go.

Thanks for pointing that out. I was thinking in terms of only
the simple mods when I mentioned the FTP repository.

Paid 200$ for used Pro 2005 with cellular mod in place. Also has a couple other mods, some lights installed for when a signal is received and a little signal strength meter.

Good price?

I cut all of your suggestions in the interest of saving time and space,
but your suggestions are all good ones and I applaud you for your rare
insight.

But what about those with a *compulsion* to read the damn posts? I mean, I
keep reading what Cheek, Mackey, Duff and everyone else has to say even
though they are seldom related to scanning. I can't help myself! It's a
sickness, I freely admit. Not all the booze or drugs in the world can save
me from myself. I keep thinking, just maybe one time, one of these guys
will post something truely revolutionary and I'll miss it! Yes, I know
that is not going to happen (no revolutionary thoughts and no misses
because nothing ever gets thrown away in Cyberspace). I'm sick, I tell
you--sick, sick, sick!

3907. Network TV on a cellular freq.?

Newsgroup: rec.radio.scanner
Date: 1996-09-06 00:00:00 UTC
From: alanoue@shrsys.hslc.org
Message-ID: <6SEP96.16525889@shrsys.hslc.org>
Source record: 224068

Yesterday I saw an ABC newsvan (ch. 7, NYC) in my town with the microwave tower extended. I figured they were getting ready to do a live remote for the 5 PM news and was interested in what the story was about. I checked some of the regular network freqs. and my local PD, but nothing. I then stumbled upon the transmission of the entire live news show (commercials included) over what wouldbe a cellular frequency. Is this how they establish the link with the studio?
Is it like one big phone call? During the actuall broadcast of the story I did hear promptings over this freq. Things like "standby", and "30 seconds". Soon after the segment was over, the cellular "link" was gone.
What's going on here?
Thanks,
Phil

3908. IcomR-1, Z1A, Bearcat 200

I am selling a Realistic Pro-36 handheld scanner which I got for Christmas a couple of years ago. It is in great condition because I've barely used it. (That's also why I'm selling it.) I guarantee that absolutely EVERYTHING on this scanner is in PERFECT condition.

E-mail me with an offer, and I'll accept the best one I receive in the next few days.

Specifications:

--20 channel memory
--Direct frequency entry feature
--UHF/VHF/HI/LO/AIR bands
--Frequencies covered: 30-54, 108-136, 136.005-174, 380-512 MHz
--Power: 6 AA batteries
--Recharging jack for use with Ni-Cd's

Love,
Brian Hafer

Try also listening to the CB radio. In Las Cruces, NM, the NMSU police switched to channel 5 on CB to talk BS. The LCPD frequented channel 7. Were the Howard County deputies talking official business at the time or BSing? If the latter, they were likely on the CB.

3912. Re: Legal and ethical restrictions on freq postings

Newsgroup: rec.radio.scanner
Date: 1996-09-06 00:00:00 UTC
From: James Robinton <robinton>
Message-ID: <50po57$rf5@news.sanders.lockheed.com>
Source record: 224073

Group,

First ... This is the type of discussion that I think we need here...
Thought filled and considerate.

Second... I would like to state my disagreement with any/all
restrictionson reception. Wires are closed systems and the wire
belongs to someone. There is only (1) spectrum of airwaves...and
and it penetrates my home, office, elsewhere. I completely agree
with the government allocating this shared resource for the purpose
of coordinating its usage. I somewhat disagree with the auctioning
unless there is a specific time period (ie leasing it for commercial
use). I think the responsibility to prevent interception should be
placed on the user (scramble, hop freq, whatever)...it should not
be placed on manufactures and listeners.

I personally feel that this is an example of special interests
influencing the congress (or other agencies). I would like to
express my concern for ethics right back to the source where the
restrictions began.

If the fact that some(one/agency) is using a frequency for
their traffic, then it is an INTERNAL ethical concern if their
personnel disclose it, and should not be if someone discovers and/or
repeats the knowledge...ie they are not under any PRIOR agreement not
to disclose it...I think a similar argument could apply to someone
saying "I saw 4 squad cars at the high school" vs "I heard someone
talk about police on 155.xxx.

Third .... in formulating your responses...Please try to consider
both sides...and I will do the same....lets discuss it not to change each
others mind but to add value to the discussion so we will all have as
much input as possible to formulate our final opinions...

Respectfully submited /Jim /N1CRZ

You don't know that. You are only guessing it.

>(None of us are machines or from another dimension, AFAIK).

You don't know that, either.

> So the rules of human nature still apply...and, I would argue,
> the rules of human conduct.

Maybe. But not the same ones. And not in the same way. The rules of
human nature and conduct are applied differently in different places,
from Cuba to Russia, to Arizona to New Hampshire.

Those "rules" are dern sure going to be different in virtuality.

>Sure, virtuality is different - we can be anyone we want to, you the
>reader can't tell if I the writer am a fifty-pound teenager or a
>three-hundred pound gorilla, or both, but we are still communicating

And one knows not what the other is or pretends to be.

>We can always press delete - after the fact - but by then the idea
>that was expressed has done its harm.

Harm? Harm? Did you say H-A-R-M? I take it you are a victim, then.
Did someone jump out of your monitor and molest you?

> That's why hate laws exist, and that's why, even if there can
> be no laws here, there ought to be limits.

So you'd advocate "Thought Police" if telepathy were more in vogue and
style?

Rubbish. Where is the HARM? However, let me succinctly note, tongue-
in-cheek, that a certain few adam-henries including A. Moss, H.Duff,

et al, frogged into this forum with the STATED, avowed objectives of ruining my reputation and career. Where were YOU then? Talk about harm! Now there was the potential for HARM. :-)

Not in calling me a sonofabitch, asshole, or other such monickers. Call me anything you want except "late for dinner".

But to tamper with my career and livlihood? Where were YOU when that shit spewed and streamed all over the place, Mr. Paul Cordingly? You weren't speaking up THEN, pal.

You dang sure don't have a stump now. None of any value, anyway. You're talking HARM that one can CHOOSE to take when someone calls 'im a low-life, turnip-eating, snake.

But I note with great alacrity that only a minuscule few of the denizens of this fine, august forum DARED speak up when Moss and Duff held the podium and purposefully, with INTENT, tried to do REAL harm.

There, Mr. Paul Cordingly, was YOURS and "the group's" opportunity to set standards for how this forum would be conducted. And you set them.

You did absolutely nothing..... you permitted it to happen and to continue to happen. I am here ONLY long after that fact was well established.

>>>I wish we could create a community standard in this newsgroup. Closing
>>>one's eyes doesn't uphold the community standards, it mocks them.

>>Why do you say that? There is no relationship of reality to
>>virtuality. You are trying to infuse your perception of a

>>extremely dangerous for society, civilization, and
>>especially our way of Life.

>Well, 'rule of law' wasn't really what I had in mind. Let's say, I
>wish that we could agree that when we come here we come as real
>people, who want to communicate with other people, as ourselves, and
>so we try to be the best that we can be, rather than the worst.

Good grief, you're dreaming or remembering "Utopia". The spirit of your dream is fine. You cannot hope to implement it on anyone but yourself without FORCE, though. You didn't call for force or utopian lectures on Messrs. Moss, Duff, Mackey, and company, though. You're analoging these impotent imposters on me, though. Why?

Because I will listen and reply on a sane, sensible level?

>If someone refuses to be at least some minimum level of decent person?
>Well I think the rest of us (ie the community) ought to have some
>lever we can pull in the name of our common wellbeing. Maybe a
>moderator is not the lever of choice, but then what?

None. Just leave the "offender" alone. Killfile the SOB. Don't talk
to 'im. Don't talk about 'im. Paste a new billboard over the
offending one. Use the power of your own computer. The "community"
has no power over the individual in virtuality. Nor over his mind.
Lest you freak out, the individual has no power over the "community",
either. In fact, there is no community. None. Nada. Zilch. It's
all in your head, pal.....literally. :-)

You are only equating a real world that you think you know with this
virtual one that you do not know. Your graphics, sound, smell,
tastes, and touch are a state of mind; not of reality. You are
perceiving something as you want to see it, and then projecting it.
I use the word, projecting, in the psychological sense; not the
physical.

>You have your own personal lever....you flame back, as low as you can.

You have no clue on my levers. You're only guessing, interpreting,
and concluding or judging. I have many, any of which can be
resurrected at any time. Godzilla exists in each of us.......

>Personally there is a level I don't go beneath, even on my favourite
>barstool, even after a snoutful.

Some people are saints in their own time. <shrug> What can I say?
When I try to walk on water, I sink. When I try to jump into my
britches, both legs at the same time, I fall down and bust my arse.
When I try to fly.....well, forget that. I'm outa your league......

>If we all applied our personal levers? This group would lose all cohesiveness.

It has none to begin with. Never will. That cohesiveness of which
you speak is a state of mind. Your mind..........not mine. Not "we".

>If some of us restrain ourselves, but others do not?

That is of no consequence to anyone but the individual who has total
control over his computer, or should have it.

>That's back to tyrrany....the guy who uses the strongest language wins.

How so? I don't understand where you're coming from. There is no
winning OR losing, except in the state of mind. If you want to win,
then win. No one can stop you, just like the monsters of DOOM can't
stop you if you use the pass codes.

>So if we have to press delete, you have to also.

No one HAS to do anything. It starts with you. You don't HAVE to do
anything, and neither do I.

>>Why isn't that good enough? Why do you feel compelled to be
>>a meddling, goody-two-shoes, tearfully begging for a force
>>to control others? Don't you understand that once this
>>force is in place, it can never be excised and that it will
>>work against you, sooner or later?

>>
>>Why not just stuff a sock in it and control your own domain?
>>You already possess a cast-iron, force-field condom.
>>Nothing from virtuality can enter your reality unless you
>>permit it.

>Thanks for the kind suggestion...but no, this runs against your
>premise that no one ought to be intimidated here. So despite your
>aggressive tone I will continue to express my views just as freely and
>vehemently as you do. Fair's fair, right?

See what I mean???? There is absolutely nothing I can do to overwhelm
or overpower you, if you choose to not let it happen. It has nothing
to do with kindergarten fairness and sandbox codes of conduct. This
is as real as it gets, that one cannot control another.

>But this is tiresome. If we all showed some restraint,

Ahhhhhhhhhhh, in the immortal words of the Grand Wizzer Rodney King,
"Can't we all just get along?"

Yeah, ri--ght.

Yes, Paul, *IF* we all showed some restraint..... but as my Paw used
to say, "Son, *IF* the dog hadn't stopped to take a poop, he woulda
caught the rabbit." IF IF IF IF.....geezus! Look, there is only
ONE and I mean one......IF.....for which we should be concerned, and
that is the IF sections in our receivers. :-)

> even you, not because we are under duress, but just because we
> want the group to work, we could get along just fine.
>
>Interested?

Ummmmmm. Thanks, but no thanks, I'll pass this time. I do NOT go for
"we" and "us" deals when no one has empowered anyone else to speak for
them. This "we" has nothing to do with anything working, and the
"group" implies separatism, and ultimately discrimination by one class
to another. Noooo thank you. I do not support discrimination in
very many contexts, and definitely not in virtuality.

I submit that we each possess The Force and are immune to all other
Forces; that each of our defenses are formidable and impregnable.

Or should be.

And that is quite sufficient to make this forum go. Ultimate force
and ultimate immunity doesn't stop people from playing DOOM. Well, at
its worst, this forum is not nearly as bloody and gory as DOOM. DOOM
is virtual reality. This forum is only virtual. The reality is in
the mind of the user. No one can stop you from being victimized.

>PS:Where do you find the time to fire back at all these people,
>anyways?

That, sir, you would not understand, even if I told you, and is not germane to this thread. Perhaps another time......

For now, try to overcome your "victim" syndrome. Apply the force to YOUR machines and YOUR life. Harness and control YOUR computer. That alone will be enough for you to conquer the world....YOUR world, the only one that counts.

Hmmm....are you SURE you're "not making any money?"

This particular scanner has been offered several times in the past year
for the closeout price of $139.95-$149.95, brand new in the box. Last
time it was on sale, I checked the neighborhood Radio Shack, just for fun,
and found no fewer than 6 out of the available 14 units had a date code
earlier than 4A4 (meaning they were fully modifiable.)

Most of them are on 49.860 AM mode.

The 5 channel models operate on the following frequencies in
FM mode:

49.830
49.845
49.860
49.875
49.890

>Peter, KD4CN

Well, Mister Peter Amateur Radio Operator KD4CN Trapp, I just posted some facts for you under the WinRadio Review and WinRadio Technical Specifications threads. Now let us cover one more little piece of turf, if we may. My turn now. :-)

Your language, demeanor, and confrontational style is abominable to me, and you may as well learn either the easy way or the hard way, that I am not about to stand for it. Here's the deal, and you will do well to drop into the lotus position, finger the gunk in your navel, and consider this:

This forum is *not* a magazine for which you pay for the privilege of lambasting me (or other people) with twisted and incomplete or untruthful adjectives in a pseudo-intellectual style, and to which I would be required to blandly smile and plant a big ol' smoocharoo on your chops with an apologetic attitude for breathing the same air as you.

This forum is a virtual arena that's wide open to everyone. I am not getting paid to be here and to let you unload your day's trials and tribulations all over me. I am here, exactly like you are, as a hobbyist and a participant. You and I are equal in every sense of the word and to every stretch of the imagination. You are no more entitled or privileged to dump on me than I am on you.

Therefore, and you may as well get this down, Mister Peter Amateur Radio Operator KD4CN Trapp, if you choose to unload on me here....any implied or overt contracts betweeen us are thus broken, and I probably *will* unload on you in return, my option of course. In the vernacular, you may dish out ONLY to the proportions that you are

willing to receive, and not a slivver more. You can learn more about that in Transactional Analysis 101, if you like.

The ONLY thing you get from me, whether or not you give anything in return, is my conscientious commitment to not flame, attack, or otherwise shoot first. That is, I will not *start* a problem with you. If I do, it would be an act of gross ignorance for which I am likely to apologize and beg your indulgence. However, simply stated, I do NOT start trouble. That is my gift to you and to the forum.

If you do wish to be aggressive, that's your business; and your problem, should I exercise my option to shoot back. And my friend, a hundred dollar bill says I can choose more potent adjectives and weld them together into a much more formidable projectile than you can. But suit yourself. That's the beauty of an anarchy. You are FREE to suit yourself. Just understand that I am not a shrinking violet and there is nothing that can intimidate me. Mackey, Moss, Duff, and company tried....and those gals are goooood! A lot better than you. :-)

There are a thousand ways you could have asked for more information and/or for me to clarify something off-camber or confusing that I might have said, without even so much as my raising an eyebrow. You picked the snippety, snooty, snotty, persnickety, anal-retentive magazine respondent's style, though, which I guarantee *won't* work in this honorable forum. Sorry, but you have to PAY for that one.

Give it some deep thought, if I haven't chapped your Amateur Radio Operator hide. And if I have.....well, think about it anyway; you had it coming.

You had only to ask. I did not possess specs at the time, and rather
than wait, I posted Part 1. Please see a new thread titled, WINRADIO
TECHNICAL SPECIFICATIONS.

>While Bill's review raves about "World Class" and gushes with
>excitement. I would like to see more real specs on WinRadio.

Well, you got 'em.

> Yes, I've seen Win Radio's web page and it has nothing more
> than Bill posted. How about some real facts not just a
> lot of marketing hype. :-(

And you didn't get "a lot of marketing hype". You got almost none.
But what little you did get was based on some fairly concrete factors
now pasted across your monitor screen as follows:

* the miniaturization of a wide-band scanner *and* a shortwave
receiver on a single-slot standard PC card - a world-first, to the
best of my knowledge. And "firsts" are entitled to a little horn-
blowing and hoopla, whether you like it or not.

* WinRadio succeeds in defeating PC generated noise, and made it
possible, to put a wide-band receiver inside a PC - another first!

* a unique user interface that is powerful, intuitive and simple to
use, designed for Windows users. Not a first, but still all class.

* the overall package is attractive and immediately useable by
newcomers as well as pro's;

* with its universal appeal (and yes, some of it *is* thanks to that
"marketing hype"), WinRadio attempts to bring the entire spectrum of
hobby radio down to the PC-user masses, a perhaps rather Quixotic
attempt, nevertheless one that aims at enlarging the number of radio
amateurs - at the time when their numbers are diminishing and when
radio is decidedly going out of fashion;

Howzzat?

3925. Air Force Two-Crown Control: new site?

Newsgroup: rec.radio.scanner
Date: 1996-09-06 00:00:00 UTC
From: alanoue@shrsys.hslc.org
Message-ID: <6SEP96.20222184@shrsys.hslc.org>
Source record: 224086

This morning I heard AF2 in contact with Crown & Royal Crown but they seemed
to be having trouble with the link. (this was over the regular 407.85)
They then indicated that they were going to "change the site". After that, they
were no longer on 407.85. Did they change to a different uplink? If so, what
freq. area would that be in? Of course, not that it would have made all that
much difference as they were preparing to "go secure".
Any ideas?
Phil

3926. Oakville/ Toronto freq's.

Hi,my friend has a Pro-51,this is a dual conversion scanner
so images are there.
How would I calculate the frequency range of 824-849 MHz??
The 869-895 range can be searched directly through the well
known kepad trick,but he is interested in the 824-849 range.
What "range" of frequencies should he search through?
We are both in Canada,in case of concern for the ECPA which does not
exist here.

Thanxx for any input given!!

> but I'd still like to pick up more LA freqs.

I have an idea that may help but it is will also possibly hurt some of the
other reception.
.
Get an antenna tuned to the frequency range that LA uses... IE if 800 get a
mobile cellphone antenna then get it mounted as high as possible in the
room with the scanner.
.
Reception would be great in the 800Mhz band but will suffer in some other
bands.
.
I have tried this at hone with Miami frequencies (I live about 50 miles
from Miami)
and I can now receive some of their calls. I have the same situation as you
. No
external antenna allowed. I am using a Radio Shack Magnetic mount cellular
phone
antenna on one scanner then an All band antenna on the other.

I'm a firefighter and my wife is an EMT, so I know very well what you refer to, although it sounds as though it isn't as bad here as where you are.

On the flip side, there are numerous times when the fact that I always carry my hand-held with has allowed me (by listening to the coms while en-route) to be much more effective in helping those that we serve. I've been able to provide traffic control at MVAs until adequate law enforcement could arrive, as well as actually arriving on scene before my fire department at times.

I should note that these are volunteer departments, and everyone is expected to respond to a page.

As to your experience with improper notification, that would seem to be more a matter of judicious radio use then the fault of a hobbyist (who may have been well-intentioned). We have a standing order of never disclosing sensitive information over a radio channel. We use cell-phones if need be, although not secure, a lot less likely to be heard by the casual listener.

Mark

The truth as I perceive it to be.

Just wondering about your Whiner-post here.

If you have a choice to "read" or "not to read" what is the
question?

make that "TO READ".....

OK, you are pissed that the GARBAGE' you are forced to read
is stinking your aura up and you are 'mad as hell and ain't
going to take this sheeeeet any more'.

You know who you don't like reading posts of...obvious it has
something to do with the CHEEKS GUY....obvious to me, obvious
to you. And others.

The answer:
1. Get hooked up to a service that you can pay for
unlimited use ... this way you cannot claim that all
these downloads are costing you money. My server
company costs me 19.95 per for unlimited net access.

This would eliminate one of the current "I'm mad as
hell's".....costs money to read about the Cheeks Guy
when I don't want to pay for his wisdom and personable
effusion in this group.

2. Once hooked up to above...each time you see Cheeks Guy
or the others who like to "tickle" the Cheeks Guy's
fancies...you can choose not to stop and be a voyeur.

3. You can then put these addresses in your KILL FILE
and eliminate all need to "prove how powerful your

threats to get him or them banned" are not.

4. You hold the answer to your problem and it is within
your reach to be free....to fly high and no one will
wonder where you are....you see, no one cares that
you are "mad as hell"....really. Just you.

To alleviate your angst it's best to just make the decision
that will allow you absolute control over the posts you will
or will not read or be offended by or be confused over...it
will be understood in time that "you have power in your
finger-tips"...that no one else can do for you.

Once you do the above...we won't have to read what you write
about how powerful-less you are on the anarchistic-ly oriented
web.

DO WHAT IS BEST FOR YOU....TAKE A STAND....BE FLEXIBLE....BE
REAL...JUST do it yourself.

Cut the cords that bind you to the Cheeks Guy and the loyal
group of festerers who are attracted by this guy's LIGHT.

bill conduit
the "etc." guy

>That may be so.....but virtuality is not a place nor is it
>public. It is a concept totally devoid of anything tangible
>and physical. Your statement has no parallel in virtuality
>though you are trying to draw one.

Well Bill that seems to be where we differ....virtuality is different, but it's still interaction betweeen real people. (None of us are machines or from another dimension, AFAIK). So the rules of human nature still apply...and, I would argue, the rules of human conduct.

Sure, virtuality is different - we can be anyone we want to, you the reader can't tell if I the writer am a fifty-pound teenager or a three-hundred pound gorilla, or both, but we are still communicating as real people. At least, we are communicating as the people we have each chosen to be for the moment.

We can always press delete - after the fact - but by then the idea that was expressed has done its harm. That's why hate laws exist, and that's why, even if there can be no laws here, there ought to be limits.

>>I wish we could create a community standard in this newsgroup. Closing
>>one's eyes doesn't uphold the community standards, it mocks them.

>Why do you say that? There is no relationship of reality to
>virtuality. You are trying to infuse your perception of a
>virtual "thing" into a semblance of rule and law. This is
>extremely dangerous for society, civilization, and
>especially our way of Life.

Well, 'rule of law' wasn't really what I had in mind. Let's say, I wish that we could agree that when we come here we come as real people, who want to communicate with other people, as ourselves, and so we try to be the best that we can be, rather than the worst.

If someone refuses to be at least some minimum level of decent person? Well I think the rest of us (ie the community) ought to have some lever we can pull in the name of our common wellbeing. Maybe a moderator is not the lever of choice, but then what?

You have your own personal lever....you flame back, as low as you can. Personally there is a level I don't go beneath, even on my favourite barstool, even after a snoutful. If we all applied our personal levers? This group would lose all cohesiveness. If some of us restrain ourselves, but others do not? That's back to tyrrany....the guy who

uses the strongest language wins. So if we have to press delete, you have to also.

>Why isn't that good enough? Why do you feel compelled to be
>a meddling, goody-two-shoes, tearfully begging for a force
>to control others? Don't you understand that once this
>force is in place, it can never be excised and that it will
>work against you, sooner or later?

>Why not just stuff a sock in it and control your own domain?
>You already possess a cast-iron, force-field condom.
>Nothing from virtuality can enter your reality unless you
>permit it.

Thanks for the kind suggestion...but no, this runs against your premise that no one ought to be intimidated here. So despite your aggressive tone I will continue to express my views just as freely and vehemently as you do. Fair's fair, right? But this is tiresome. If we all showed some restraint, even you, not because we are under duress, but just because we want the group to work, we could get along just fine.

Interested?

Paul

PS:Where do you find the time to fire back at all these people, anyways?

3940. Seattle--Citizen's Access Guide (revised)

Among the interesting things in the Citizen Access Guide:

15 talk groups for the Seattle Fire Department

5 talk groups for Seatte Police (dispatch only; no tactical talk groups)

Among the interesting things not in the Citizen Access Guide:

Seattle Fire Dispatch still goes out on the old frequency of 453.800.

You guys are good; I did switch to WFM. However, I may have another
problem. I switched to WFM because I stopped picking up anything in
the 800 band using NFM, while switching to WFM allowed for normal
reception.

So, I suppose the problem now is: why does using NFM no longer working
properly, while WFM does?

(BTW, very impressive that two of you figured out the WFM within a few
hours of my post! Hope you're as good at the NFM vs WFM question!)

Correct! However, I find that NFM is not working on the 800 band (it
is as if the squelch is turned all the way up; it may pause for a
second, but the transmission won't come in - switch to WFM, it comes
in clear (but not so loud!).

So, it seems I have another more fundamental problem - why is my NFM
not working on the 800 band?

Perhaps your PRO-2006's reference oscillator is off-frequency.
This would be more noticeable on higher frequencies.

To verify this, search in the 860 MHz region using 5 kHz
steps instead of 12.5 kHz steps. Note whether you receive
signals clearly and what frequency the LCD displays at
the point of best reception. Compare the displayed frequency
to the assigned frequency.

I went in RS yesterday and did not buy anything. I said I had heard that the new catalogs were out. I asked if they were free and they said "Yep! Take one." I am a frequent customer and have spent a small fortune there over the last few years. However, the guy working was new and didn't even know me. I guess they're free here.

>would become moderated.

Yes? Is that wrong? Am I not free to dissent? When it looked like
THIS forum was the target of an ambush, you betcha I was resistant to
it. I am resistant to all forms of tyranny over the minds of men.

>You then accused Tim of all sorts of underhanded
>shennigans even though you were unclear about what he was proposing.

Isn't it incumbent on the poster to be clear? He wasn't. Nor was he
open to discussion of the matter. Looked underhanded to me.

>Moderation of a newsgroup is a good thing if it eliminates having to shift
>throughs post that have nothing to do with scanning. If that was your
>purpose, it was a worthwhile thing to attempt.

One has many options and alternatives to do just what you said - from
the keyboard of his own computer, without reaching out and diddling
into someone else's affairs. Moderation is not necessary. You can
moderate from your own keyboard.....decisively, mercilessly.

>I disagree with the assertion that Tim has been anything but above board.
>The guy made a worthwhile effort to set up a new newsgroup by following
>all of the basic guidelines, and further asked for public discourse on the
>matter. I don't see how that makes him a phony! Your characterization is
>counter to the facts.

Where did he ask for public discourse? He was closed-mouthed, and
asked for E-MAIL, fer Pete's Sake! He did NOT ask for public
discourse whatsoever. Show me where he did.

>If the consequence of people "participating in their preferred styles" is
>that others (like Tim) feel compelled to leave the newsgroup, then before
>long all we'll have here is "style" and no substance.

Not if you mind your own business and leave others to mind theirs.

Not if you control your own computer and leave others to control
theirs.

Not if you moderate the I/O of your domain to suit your tastes and pleasures and leave it to others to moderate theirs.

>> Look, man, you want THE truth? Yours and Hobart's recent
>> actions and mannerisms are far more negative, damaging, and
>> destructive than those of Mackey and Company. THEM, we can
>> laugh AT and WITH. You and Hobart? You dudes are as
>> serious as a heart attack.

>I think that the constant bashing of individuals for who they are rather
>than what they say is far more destructive and damaging.

How and why? It's only because YOU choose to feel destruction and damage. How the hell can you speak for what others feel? How can you speak for what others do and mean? How do you know that Jonna Mackey isn't my wife and we're just playing? You can't draw any semblance of a definitive conclusion on this bashing thing. You don't know anything other than what you see.....and what you see is VIRTUAL. Not real. You are only pretending that it is real. You are fondling catturds in a sandbox and then whining because they touched you.

Geezus H. Kriste, Michael, you're making a mountain out of a molehill and blowing smoke into perceived fires and creating delusions from illusions.

Please.....geezus, man,.....control your own computer. It's almost as if you're pissed off at the sounds of people breathing because it freaks out your horse.

Control your horse! Or get another one. Plug the nag's ears! Kick 'is arse! You can't make others responsible for your welfare and "safety" out here in virtuality. You and you alone are responsible. You want to be a victim, fine, be a victim, but don't snivel about it. You want to be immune? Be immune. Just like that. (Snapping fingers)

Think about what I am trying to tell you, fer Pete's Sake! It isn't "my" way, but it IS the ONLY way the anarchist usenet can work. There is no other way. Take THAT to the bank.

>races and whether it is a good deal? They say the regular price is
>C$470 (US$ 345).

I consider $235 US a good price for a PRO-60. Expect to
use an earphone or headphones as the speaker audio of
most portable scanners isn't loud enough to compete with
noise at public events -- especially races.

From my FAQ, "BUYING A USED SCANNER RADIO:"

PRO-60: 1995 vintage. Very good portable made by GRE. 200
channels, single search range. Similar features and same
IFs as the PRO-43 it replaced but the PRO-60 has wider
frequency coverage and crisper audio. Covers 75 MHz and
commercial FM broadcast bands. Improved Direct search can
be stepped manually in single steps. Uses same 6 cell
battery tray as other high end GRE portables. Railfans take
note -- the PRO-60 and PRO-43 are subject to interference in
160 - 162 MHz range. Draws 100 mA while scanning. See "The
Radio Shack PRO-60 Portable," by Bob Parnass, AJ9S, in
Monitoring Times, September 1995.

Probe for DOS (which runs great under windows BTW) is my favorite... Tons of features, fast (100 channels per second on a fast computer) and runs on any old DOS machine... makes a dedicated computer for the radio an affordable proposition... and a great package (G).

Scanstar for Windows is also a good choice.

Ken

---- snip----

Ken-

Yes, welcome to the 8500 owner's club (G). I sent mine back to Uniden for a fix and it did help the audio and sensitivity, somewhat. I have heard of them making offers to other 8500 owners to replace it with a 9000 which is a _much_ better radio, but don't know if this was a special case, or a matter of policy. It is, simply put, a bad design, and they didn't do a whole lot to help it. Makes a nice door stop though, I'm told by a friend of mine who owns one.

To my knowledge, the Cell Tracker is only available to law enforcement and cell phone professionals (technicians and such). In a nutshell, the cell tower sends a signal to the phone telling it to switch to a certain frequency and power. The software then captures that information and tunes the receiving unit to the frequency of the phone.

+Don.....

I think a more poignant point would be
"what uses do you put your ears to?"

What purpose do you have in mind when
you 'EAR-GEAR' down and get to boogie...

question mark?

Trunked will drive you crazy if you are
making money with the radio and will
drive you crazy if you are not. It's
your needs to listen opposed to what
the computer does when the "clicks" are
made on the mic and progresses out of
immediacy on to the next agency or site
using ... police,fire, street sweeper,
juvenile, divers, tree climbers, etc.

Don't know how many channels they have
allotted? That is important.

Don't know how many surrounding agencies
have "shared" talk/dispatch/mutual aid
with the base ....?

when you eliminate 800, what is left
to listen to in your area...? I don't
have a map handy.....

Again, it all hinges upon the purpose
to which you EAR GEAR down....

bill
the "etc." guy

> The source I cited has been useful to me and others for quite awhile,
> despite whatever opinion you may have. I thought that others looking
> for (other) mods might think so too.

Ohhhh, it ain't a matter of opinion, pal. The quality and content of
such archives speaks for itself. Just like in the game of poker, the
cards speak for themselves and there is no "opinion" of which is the
winning hand. "Useful" is one thing. If you want the cellular mod
for a PRO-37 or the wideband unlock for an Icom IC-2GAT, sure, the
archives will have those kinds of files. "Clip-a-diode" or "add-a-
resistor" kinds of things that can be described in a few lines or
paragraphs. But those kinds of modifications are in the rare
minority.

> Perhaps you know of a better repository for mods?????

Ummmmmm, yes. Books. Magazines. Newsletters. Where the authors are
compensated for attention to detail and quality. Where you get more
than a few paragraphs with plenty of graphics, photos, tables, charts,
and such.

Don't get me wrong. A writer does not need compensation for exposing
the cellular mod for a PRO-2006. Or the wideband Tx mod for most ham
transceivers. And for this kind of thing, the FTP archives are
wonderful.

Don't expect to find out there how to turn a 400-ch scanner into a
25,600-ch scanner or how to interface a computer to your scanner; or

how to make a slick "smart" circuit that differentiates among
different kinds of signals. Or how to make a cheap lowpass
filter/amplifier that detects CTCSS tones..... catch my drift?

True. But it it doesn't necessarily mean they wouldn't be a good
moderator, either. A lot depends on if they've been to Moderator
School.

> An analogy would be the
>good salesman is made manager, but then fails. It's a different skill set.

Well, sure, but on the other hand, just TRY to find a sales manager
who has never been a salesman..... :-)

>Selfishly, I'd rather have those with great technical knowledge spending
>time being productive in that arena, not reading every (damn) post for
>"suitability". My recommendation would be someone (or a group) who has a
>reasonable amount of scanner knowledge, enthusiasm about the topic, the
>time to Moderate, and the ability in a amicable way to keep things on
>topic. This is not to say controversy is off topic, but I think it is
>agreed flaming is.

Who cares? If flaming is off topic for you, then don't flame. That's
easy enough. If others' flames bother you, then don't read them.
That's easy, too. It is a WHOLE LOT EASIER for you to not flame and
to not read flames than to control hundreds of others and get yourself
all worked up into a big ol' snit when you fail.

If you insist on a moderator, then you will eventually get a censor.
Remember, there really is no such thing as a moderated Usenet
newsgroup. It's a censored newsgroup. Let's don't mince words here.
There are moderators in other nets, but here, the control is over
message content, not the posters.

You are doomed to failure unless and until you learn to do this
moderating or censoring from your own computer......for you. It won't
ever get any better than that. But it can get a lot worse.

That doesn't matter, either. All that matters is that YOU leave it
alone. If you can. If you can't, then that doesn't matter either.

> Everyone of you are fouling up this newsgroup with garbage.

Nothing is fouled up and no one is doing anything. Why do you think
so? Are you not capable of controling your computer?

>PLEASE DROP IT!!!

Drop what?

> If I knew who to complain to, I'd get you all kicked off this
> UNLESS you actually put some real info here.

There is lots of REAL info here. Don't you know how to use your
computer to access it? Perhaps you better complain to your mother.
She might kick us all off. Or teach you how to kick us off. You can
do it right from your keyboard....didn't you know that?

> Please go away!

Who?

> sincerely tyler N3SPD

Does that mean you are an Amateur Radio Operator? I thought Amateur
Radio Operators were fairly intelligent. No?

To come off as being so victimized as you have done is either a
display of gross ignorance and sheer stupidity, or the lack of ability
to control your computer. You act a lot like someone who lets their
dog bite 'em all the time and then whines about it.

You have to to take that computer of yours by the lugnuts and squeeze
down until it begs for mercy and then beat the snot out of it until it
agrees to not victimize you anymore. All this is in your head, Mister
Tyler Amateur Radio Operator N3SPD....it doesn't exist in reality.
Just in the vast open spaces of your mind..... You have been
victimized by a delusion created by an illusion.

Now take a deep breath; chant a few ommmmmm's; clapse a hold of your computer, and teach it how to treat you decently.

Source record: 224132
Cross-posted to: rec.radio.scanner,alt.radio.scanner

I have one of these things and so far have received very little but my VDU. WinRadio comes with an antenna which is a length of co-ax with the shield stripped at the far end. I've tried putting in a length of co-ax to move the antenna further from the VDU but with no luck.
Something I thought of but have not yet tried is to use a VDU video cable with a ferrite in case something is being radiated back from the VDU. I'm not very hopeful.
Incidentally, I have a Dell Dimension XPS(?) with a P133 CPU (129.99 something MHz according to WinRadio). This has three or four slots for plug-ins. I couldn't believe the layout which means that any "long" cards extend over the CPU. In fact, cards have to be inserted such that they go through the heat-sink fins. Another point is that I get more noise by inserting WinRadio in the one slot which does not extend over the CPU.
My tuppence worth.
John.

THE ULTIMATE SCANNER has a potent memory mod for the PRO-2035/2042,
liken unto 4,000 channels or even 16,000 channels. And it's "doable"
by most anyone who knows a soldering pencil from an arc welder.

Since the PRO-2035 is almost a clone of the PRO-2004, PRO-2005, and
PRO-2006, many of the mods in the Scanner Modification Handbooks, Vols
1 & 2, and in the World Scanner Report will work for the PRO-2035.
Virtually everything except cellular and speed, anyway.

> Also, would you mind sending me a brief

I don't really mess with active antennas because of the preamp in them that literally destroys the dynamic range of a scanner. I'm sure there are times when they do work, but overall, there's little or no sense in ruining a perfectly good low-noise front end. I will emphasize that conditions vary dramatically, and you may well have found an exception, especially if you were in a low congested RF region.

>I've moved, somehow the Dressler didn't make the move, and I'm looking
>for the proverbial "all": I want all bands (30 - 900 will do), high
>gain, omnidirectional. Gee. Wouldn't we all. ;)

That pretty well limits you to a discone, shy of another something like the Dressler. Any whip is omnidirectional, though its resonance can't possibly be flat over that spectrum. Hence the on-board preamp to make it an "active antenna". The thing is, with that Dressler, you probably heard stuff that wasn't really there. Pseudo-signals, including intermod and images. A lower gain, non-preamplified antenna like a discone, might actually hear more of the real stuff than that Dressler did. This could be the time and opportunity to find out.

>Will a discone really beat an active in pulling in the weak signals,
>across the dial, all things being equal?

I'd like to say an unequivocal "yes", but I can't. In a low congested RF area, the Dressler might prevail over a discone. In a big-city environment, I don't see how it could. What part of the planet are you on?

Rgds,

Bill

The 2035 and 2042 can be modified for computer control and/or to receive cellular frequencies. Both mods are readily available and are probably the most desireable things that hobbyists want to do (if past posts indicate anything, it is that people mainly want to listen to cell phones when they are inquiring about mods). These are mods available in the customary sense, period.

Your options are to
--install the Optoelectronics OS535, software and obtain the unlock code; must use PC to receive cellular;
--swap out the CPU, which can be purchased from overseas (Javiation in particular); no PC needed but no computer control either.

I'm sorry, I don't understand what you are saying. If the newspaper printed a libelous statement both the reporter and the newspaper could be sued. That much is certain.

What do you mean have direct control over what is printed? The newspaper or the reporter?

Yes, Scan-L does redistribute what is sent to it. If it redistributed a libelous statement then the maintainer of that list could be sued as well as the person making the libelous statement. That's what was being threatened, I believe.

Yes, some one is there to say completely what goes and what stays--lists are moderated (sometimes actively, sometimes not, but someone sets up the lists, controls its distribution and cleans out the spam and other b.s.).

Again, can't check on the BC-3000XLT manual but I asume other than
substituting the word "BC" for "UBC" the two manuals are the same.

On the first inside page (right hand side) is there a large diagram of the
layout on the fro of the 3000XLT - title page is "Controls and Indicators".
The button in questions is identified as "3" and cross references as
Shift/Decimal/Clear

> things like changing the audio mode. I think it would be better if the
> key had a "." on it instead of a "-".

Good eyes :-)

Can't say I'd ever noticed it wasn't quite a "."

You will find that the layout of 0-9 and a "." key is pretty much standard
to all scanners (with a little variation) and had you perhaps had something
before it would have been second nature to press the "." key but as you say
as it was your first it just threw you a little.

Ah, now we have rec.radio.scanner.flame_fest, a new newsgroup where we can
direct the combattants. Gotta wonder, someone sets up a forum just for
flamers in only a few days but the rest of us couldn't even get agreement
on setting up a moderated forum, which would have been far more useful.

I'm selling the following: (Prices Lowered 9/5/96)

AOR 2500 - $400 obo
TRIDENT 4500 - $400 obo

Or will trade for AOR800 or PRO 2006 or PRO 43

Both are in excellent condition.
Full Cellular, AM/FM/NFM/SSB

OTHER STUFF:

ICOM 2GXAT 2m extended RX - $200

2 RS TRC-207 40 ch handheld CBs - $85 for both.

Bearcat 560xlt 16 ch scanner - $60

E-mail any questions.

I have owned my BC 8500XLT for almost 4 years now. I do not have the problems you r reported.d.

I really enjoy the alpha-numeric display and would only buy scanners with this feature. I live in a suburban area and have found the radio works very well. I am also located along a flight path for the Wilkes-Barre, Scranton Airport. Inbound flights call their approach within about a mile of my house. All my Radio Shack Scanners are affected by the intermodulation. The 850 is unaffected.

I still use the antenna the unit came with. If I can offer any help please ask.
regards...rich

From: "Jason J. Garcia" <jjgarcia@linkline.com>
Message-ID: <3231D367.187A@linkline.com>
Source record: 223906

Well... it's not a complete solution but a partial one. But IT WORKS.

I use mine passing the audio through a R.S. DSP40 Noise Reduction System (Cat. #21-543 discounted right now @ $29.95 from $79.95 - selling out). My favorite settings are: BANDWITH/medium FILTER/NR. This is a matter of personal taste, in my opinion. You can play with the settings and find your favorite.

Even BETTER: a MFJ-752C Audio Filter (available from a myriad of Ham Radio and SW dealers) using its Primary Filter LP (Low Pass) position.

If I were you (or anybody else reading this posting) I would first try the R.S. alternative (cheaper and effective).

Good luck, fellow(s)! Let me know if you did it and it worked for you.

: Last thing, just wanted to say, "I'M SORRY!!!"

If this was meant to be an apology you need to crawl back under that rock
and work on the 2nd draft. If there's anything more annoying than childish
flame wars that go on too long, it's chain letters, get rich quick schemes
and advertisements. Hell, even the flames can elicit a chuckle. If it was
meant to be a troll, then you've hooked me, billy-goat gruff.

Glad you've reformed though, your soul can probably still be salvaged at
this early stage. <g>

And then (In California), there is the corridor that goes North along
the Eastern slope of the Sierras from Mojave to Reno. Part way up,
there is R-2508 MOA which is the live fire area at China Lake. This is
bordered by Inyokern Airport, which has a lot of glider activity.
Mixed in with this is a High speed, low level corridor (North/South)
Talk about a nightmare! Last weekend, a glider from Reno got on the
ranges, and the range controller couldn't get him off. They finally
got his frequency, and told him in NO uncertain terms that a Harrier
was above him dropping bombs! He got smart aleky, and things went
down hill from there. They are sure gonna get HIM!

> ... a rail vacation ... Broadway Limited ... Silver Meteor ...
> ... the radio frequencies that Amtrak would use ...

Railroads in the US operate in the VHF band 160.215 - 161.565 MHz. Outside of the Northeast Corridor, Amtrak uses the radio frequencies of the host railroad. The Compendium of American Railroad Radio Frequencies lists:

Pittsburgh,Pa
to Harrisburgh,Pa Conrail 160.800 Road
to Philadelphia,Pa Amtrak/SEPTA 160.350 Road, 161.265 train mngrs
to Washington,DC Amtrak (NEC) 160.920 Road
(DC terminal area) Amtrak 160.290 Ch 1, 160.800 term. area road
to Richmond,VA RF&P (CSX) 161.550 Road & disp. (161.100 possible)
to Wilson,NC CSX 161.550 Road, 160.410 dispatcher
to Auburndale,FL CSX 160.590 Road, 161.520 dispatcher
to Miami,FL CSX 161.100 Road, 160.320 dispatcher

> Is there enough radio traffic to justify taking a scanner?

Traffic tends to be sparse outside of the stops, assuming there are no problems, but there are interesting tidbits from time to time. I find it comforting to hear the automated waypoints announce "Milepost xx - No defects" every 20-30 miles (I keep waiting for the computer voice to say "Holy Sh*t - have you got problems!").
Bring batteries as well as 120v xformer - the interesting communications occur when you lose power. On the Crescent I find a flashlight is also a good idea <g>.

Respectfully accepted, Jim, , , , :-}

I have lived in the China Lake area of the high California desert for
thirty years. When I picked up my interest in scanning, I tried to
find all of the frequencies in our area, but I found only tattered dog
eared pieces of paper at the local Radio Shack, with listings that
were, well,,,, less than accurate. SO,,, I took on a cause. To
make, produce, and publish a booklet listing all of the frequencies
I could hear.

My first approach was to send a letter to the Navy, asking for a listing of all the frequencies that they use here. I pointed out that I did NOT wish to invoke FOIA (Freedom Of Information Act), because I knew that it would be an imposition on their time. Several days later, I received a call from the Navy Counsel's Office (read, "Navy Lawyer") She asked me to withdraw my request, and that she would give me an address in Washington that would accommodate me. I felt that this was a reasonable request, so I did withdraw my request, and instead sent a letter to, , , NOW GET THIS, , , , "The Office of Freedom of frequency information", in Washington DC. One year and three letters later, I was still waiting for an answer. In other words, I got stiffed by the Navy AND the "Government" My only other course of action was to start scanning. Which I did, and after about five years, have what I consider to be THE definitive list for this area.

My point is, that you cannot depend on others to get the job done. I didn't _personally_ get *all* the frequencies, but I motivated others to help me get them. And NEVER depend on the agency to help you in your search. Especially if the agency is a law enforcement or military one. :-{

3999. WA State Patrol controlling your radios

Newsgroup: rec.radio.scanner
Date: 1996-09-07 00:00:00 UTC
From: kc7iay@ibm.net
Message-ID: <DxDwp1.BqF@eskimo.com>
Source record: 223914
Cross-posted to: rec.radio.scanner,wa.general,rec.radio.amateur.misc

The Washington State Patrol has proposed the adoption of a Washington Administrative Code regarding wireless communications systems used by motorists (not necessarly attached to vehicles).

The proposed WAC: [new section]: "WAC 204-10-045 Wireless communications systems. Hands-free, wireless communication systems may be used by motorists while driving a motor vehicle. Listening devices that include an earpiece shall cover only one ear. Wireless communication systems must be approved by the Washington state patrol equipment review unit."

There will be a hearing held on October 9, 1996 at the General Administration Building at the State Patrol's Commerical Vehicle Division Conference Room, Ground Floor at 9am. Written comments should be sent to:

Carol I. Morton
Administrative Assistant
Equipment and Standards Review Unit
Box 42635
Olympia, WA 98504-2636
360-412-8934

-=-

Comment by Bruce Miller:

There are three distinct parts to this proposed WAC:
1. Hands-free wireless communication systems is approved.
2. Listening devices attached a wireless communication system.
3. Approval of wireless communication systems.

There are several aspects of this proposed WAC that bother me.

There is no definition of "communication system" in WAC 204 or in the RCW (Revised Code of Washington) that I could find that pertains to this WAC. This means the WAC would apply to receivers and transceivers.

Additionally, keep in mind the approval of the "communication system" is not dependent, according to the wording, on whether it is hands-free or two-way: "Wireless communication systems must be approved by the Washington state patrol equipment review unit." Note that there is no qualifying adjective before "wireless communication system" to restrict it to hands-free or two-way.

Consequently, this proposed WAC can be interpreted to include receivers and transcievers, giving the Washington State Patrol the sole authority to determine what type or brand of radio equipment you could use in your vehicle--be it for am/fm, ham, CB, commercial, or cell phone, paging.

This proposed WAC is worded extremely poorly and should be thrown in the garbage because of its pervasive control over ALL radio equipment that could be used in the car (not just attached to it).

Even though I have not yet checked out how this would conflict with FCC regulations, it seems to me that the FCC has authority over the type of equipment I can use in my vehicle for transmitting.

4001. RG-213 Coax

Newsgroup: rec.radio.scanner
Date: 1996-09-07 00:00:00 UTC
From: Tom Montgomery <monty55@ix.netcom.com>
Message-ID: <3232048B.3B3B@ix.netcom.com>
Source record: 223916

I have been given a 25 foot length of RG-213 with BNC
connnectors/adapters. It is brand new and has mil spec numbers on it.

They are M17/074-RG213 Mil-C-17 12515 Teledyne Thermatics.

It this good coax for scanning 30-1.3 with ? It obviously is military
and I was wondering if I could use it. Thanks for the help

Being a Radio Shack employee I can tell you that the person who changed the price to 0.00 is did this because he just didn't want to be bothered with an arguement. You still have to pay the stupid $2.95. Me, I sometimes give the darn things away when I know there is a sale or soon-to-be sale involved. Wy argue over a catalog? Customers are lost over it.

If you are stopped by a police officer for a speeding ticket, you will NOT be charged for having a scanner. I have had multiple occurences of this lately. The officer would ask if the antenna on the car is a scanner. I would say yes and that I have checked with my local laws that it is legal, and it is because I really did check. You will only be charged with the scanner if you are arrested for a crime in which the scanner was used for or in possesion of, for instance a burglary.

Bwahahaha!!! For ONE thing, it's called a red box, not a black box and
for another thing, they don't work on most payphones and since all Bell
companies went to Electronic Switching Systems years ago you stand
a pretty fair chance of getting cought IF you find a payphone it works
on. BTW, you can make a red box by simply recording the sound the
reciver makes when you drop a quarter in the slot.

4020. Local police going digital -- now what?

Newsgroup: rec.radio.scanner
Date: 1996-09-07 00:00:00 UTC
From: jackal@aimnet.com
Message-ID: <jackal-0709962334470001@news2.aimnet.com>
Source record: 223935

A news story recently announced the Santa Clara Co. Sheriff's Office is going to a digital radio system. Does this mean I'm out in the cold as far as listening to their comms? Are there any digital receivers I could use to listen?

There was no mention of encrypting the digital signal, but I'm assuming that's why they're going digital...

4021. HARBOR PILOT'S FREQUENCY

Newsgroup: rec.radio.scanner

Question: On what frequency does the HARBOR PILOT usually
transmit? I have seen the QE2 leave the port of NY with the harbor
pilot speaking into a hand held unit, but I could not find the correct
frequency. Does anyone have an answer for me?

>the morgue!"

A victim's name is rarely given over the air. Regardless, the above "friend" would have said the same thing had he received the info via a scanner, TV news, or broadcast news. Don't blame a listener's insensitivity on the mode in which the info was gained.

>I remember the old story about the cop delivering a death message to the
>wife of a fatality accident victim. "Are you the widow Jones?", the cop
>queries. "I am not." she replies. "The hell you aren't!" quips the cop.

Police chaplains or high-ranking officers usually deliver death messages; they've been given training in how such information should be given to next of kin.

Bill,
I suffer from the same problem of att restriction and I use a discone in the attic, it works just fine! You might also look at some of the active aerials that are on the market. They work well too but can have problems with strong local signals like hams and broadcast stations.
regards,
Mike Ganley.

4024. Scout 40 with V3.0 firmware help

I just bought a Scout Model 40 with V3.1 firmware. Opto says it does not interface directly and reaction tune the ar8K.

Does anybody have any experience with the Scout and interfacing it to the 8K and a PC?

Appreciate any help....

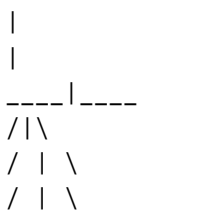
The Icom AH-7000 or the Diamond D-130J will do the job nicely, and
they're available at leading mail order radio dealers everywhere.

The best one I've ever seen (and own) is an Araki YA-DC1 but I can't
tell you where to find one.

A discone that looks kinda like this:

will have a narrower bandwidth than one that looks like this:



However the improvement is at the low end, not the upper. Most modern
discones with the vertical element of which I am aware are very
capable from about 50 MHz up to 1 GHz or higher. Those like Radio
Schloque's without the vertical are good for 100 MHz to 1 GHz.

>> What part of the planet are you on?

>The cold, Mid-MIchigan part <g>. The areas I want to pull in are
>local, plus two cities about 40 miles away. My Dressler used to do
>pretty well when I was about 50 miles away from Houston in pulling in
>Houston signals, but shut down almost entirely below about 50 MHz.

The critical aspect of any antenna, and especially the discone, is
height. Install it as high as possible for those weaker, distant
signals. Keep it away from nearby objects and structures, too. And
use low-loss coax like Belden 9913 if you can; otherwise RG-6.

Rgds,

Bill

BTW, have you been reading all the postings about the radio shack
catalogues and people being charged for it. I got mine yesterday for
free when I brought an adaptor plug for $1.99. I had a chance to ask
the clone at the counter why some RS charge for the catalogue. He
said that it was more than just a catalogue but a TECHNICAL Manual
also. It contains valuable technical information that could not be
picked up from any other source. Well, I am still looking between the

pages for this valuable technical information he was talking about.

Good scanning to ya,

For those of you wanting answers as to how and why, I publish the following from the FCC:
****

Before the
FEDERAL COMMUNICATIONS COMMISSION
Washington, D.C. 20054

In the Matter of }
}
Timothy Harold Hoffman }
Phoenix, Arizona

OFFICIAL NOTICE OF VIOLATION
(corrected copy)
Released: June 26, 1995
By the Compliance and Information Bureau

I. Introduction
1. This is a Notice of Violation issued in accordance with Section 1.89 of the Rules, 47 C.F.R. § 1.89, to Timothy Harold Hoffman for willful violations of sections 301, 303(n), and 333 of the Coomunications Act of 1934, as amended (47 C.F.R. §§301, 303(n), 333) and sections 15.29, 95.413(a)(4), 95.413(a)(6), 95.426(a)) for operating a radio transmitter on amateur radio service frequencies without a valid license, failing to allow inspection of the radio station by authorized fcc personel, willfully and maliciously interfering with radio communications of licnensed stations, and on CB channel 36 transmitting one-way communications, Transmitting material to amuse or entertain.

II. Background

2. On may 14, 1995, Agents from the Commission's Compliance and Information Bureau (CIB), Using
mobile direction finding techniques, detected radio signals on CB channel 36, J3E emmission (lower
sideband), coming from an antenna located at 911 West Highland Avenue, Phoenix, Arizona 85013. The
transmissions consisted of retransmitted signals from an Amateur Radio Service repeater on 147.240
MHz. The following violations were observed from 8:05 until 8:50 pm MST and from 8:55 until 9:15 pm
MST:

Rule Violation Description

47 C.F.R. 95.413(a)(4) Prohibited transmission of one-way communications

47 C.F.R. 95.413(a)(6) Prohibited transmission of any material to amuse or entertain.

3. On May 15, 1995, Agents from the Commissions CIB, Using mobile direction finding
techniques, dtected radio signals being transmitted on 146.340 MHz, F3E emission, coming from an
antenna located at 911 West Highland Avenue, Phoenix, Arizona 85013. The transmissions consisted of
the use of Amateur Radio Service call sign N7ZZT and asking for a new white cane and new eyes, among
other things. Transmissions were observed at 7:44 pm and 8:21 pm MST. At 8:25 pm MST, the FCC
agents attempted to inspect the radio station at 911 West Highland Avenue. The adult male that came
to the door admitted to being Timothy Hoffman and would not allow the agents to inspect the radio
installation. The following Violations were observed this date:

Rule Violated Description

47 U.S.C 301 Transmitting on Amateur Radio Service frequencies without a valid
operator or station license.

47 U.S.C. 333 Willfully and Maliciously interfering with radio communications
of licensed Amateur Radio Service stations.

47 U.S.C 303(n) and Failure to allow station inspection by authorized FCC personel
47 C.F.R. 15.29 and
47 C.F.R. 95.426(a)

III. Discussion

4. Timothy Harold Hoffman was clearly in violation of 47 C.F.R. ¤¤ 15.29, 95.413(a)(4),
95.413(a)(6), and 95.426(a) and in violation of 47 U.S.C. ¤¤ 301, 303(n), and 333.

IV. Ordering Clauses

5. Accordingly, IT IS ORDERED, pursuant to Section 308(b) or the Communications act of 1934, as amended, 47 U.S.C. 308(b) and section 1.89 or the Commission's Rules, 47 C.F.R. 1.89, that Timothy Harold Hoffman submit a written statement concerning the Violations of 47 C.F.R. 15.29, 95.413(a)(4), 95.413(a)(6), and 95.426(a) and of 47 U.S.C. 301, 303(n), and 333 to the following Address:

Federal Communications Commission
P.O. Box 6
Douglas, Arizona 85608-0006

The answer shall contain a statement of action taken to correct the cinditions in violation and
action to preclude recurrence. Each rule section in shown violation shall be addressed seperately.

The staff will use all relevant and material information before it, including the information
disclosed in your reply, to determine what, if any, enforcement action is required to ensure the
current and future Rule compliance. Willful or repeated violation or failure to reply may result in
monetary forfeiture.

A WILLIFULLY FALSE STATEMENT IN RESPONSE TO A REQUEST FOR INFORMATION BY A FEDERAL AGENCY COULD BE
PUNISHABLE BY A FINE OF $10,000 OR IMPRISONMENT FOR 5 YEARS, OR BOTH, UNDER TITLE 18, U.S. CODE
1001.

6. IT IS FURTHER ORDERED that this notice shall be sent by certified mail, return receipt requested, and by regular mail, to Timothy Harold Hoffman, 911 West Highland Avenue, Phoenix,
Arizona 85013.

FEDERAL COMMUNICATIONS COMMISSION

[Signature]
Stephen Y. Tsuya
Engineer in charge
Douglas office

****
END OF FILE.......

****

Since the writing of this notice of violation, Mr. Hoffman has repeatedly violated the terms and
conditions as stated in the above notice. He also jammed emergency communications on the autopatches, falsely reported emergencies, and generally created lots of havoc. He use the Call
N7ZZT on a number of such occasions, as well and the following calls:

AA7KV (Craig Ickes)
K3NPR (invalid call)
K7UZI (Invalid Call)
and others...

His was a pattern of lack of respect for the law. He also used telephone harrassment as a tool to
get what he wanted. This pattern has continued until fairly recently (about 3 weeks before the NAL
was issued). According to the Local Official Observer, numerous tapes and documents were received
regarding this individual and his acctivities. I could not get access to the tapes, or the transcripts of such, as the investigation was still ongoing.

I hope this document answers the many questions you might have regarding this case..

Thank you.

Eric Oyen.

I would get a outdoor type tv antenna and turn it to vertical.
It will make a great directional antenna. vhf - uhf type. Hope you
have a tall attic. Get the biggest one that will fit.
Rabbit ears is my second choice. They can fit in the attic easier.
If you listen to freq under 50mhz it may not work well.
tv channel 2 is 59.75mhz channel 69 is 805.750mhz
I use a discone in my attic but I live in a metro area.

Yes, you are free to dissent. But in this case, you were flat out wrong.

It was clear to me and quite a few others. It would have been quite easy
to seek additional clarification if you were unsure of his aims.

> discourse whatsoever. Show me where he did.

I'm not inclined to go back and cite chapter and verse, but I can say with
certainty that he asked for people to contact him if they wished to be
involved in moderating and he posted the names. You responded to at least
some of those posts and volunteered to moderate. Seems you had as good a
crack at being involved with this as anyone.
>
> >If the consequence of people "participating in their preferred styles" is

Naw, there people at the end of the keyboard, not robots. You call it
VIRTUAL, but this is no more virtual than the telephone.
>
> Geezus H. Kriste, Michael, you're making a mountain out of a molehill
> and blowing smoke into perceived fires and creating delusions from
> illusions.

Now wait a minute Bill. Someone has expressed an opinion on moderating and
Tim's involvement. I merely disagreed. What am I doing that you don't on a
regular basis? I made a few comments, and you've replied with quite a bit
of your own opinions--if the mountain is measured in words, yours is the
Andes, and mine is the Blue Hills on this.
>
> Please.....geezus, man,.....control your own computer. It's almost
> as if you're pissed off at the sounds of people breathing because it
> freaks out your horse.

I'm not at all pissed. I don't think I said a single angry word--not to
you or anyone else. I expressed an opinion in response to your opinion.
That's okay isn't it? It was my impression that people were attempting to
respond like gentlemen.
>
> Control your horse! Or get another one. Plug the nag's ears! Kick
> 'is arse! You can't make others responsible for your welfare and
> "safety" out here in virtuality. You and you alone are responsible.
> You want to be a victim, fine, be a victim, but don't snivel about it.
> You want to be immune? Be immune. Just like that. (Snapping fingers)

I'm sorry, but I don't recall asking anyone to be responsible for me. I
don't recall claiming to have been victimized. I don't recall that I
sniveled. Those characterizations are unsupported by the facts.
>
> Think about what I am trying to tell you, fer Pete's Sake! It isn't

>
We disagree on whether newsgroups are anarchist. If they were, they simply
wouldn't work at all. The Bill of Rights, a glorious example of
cooperation, was created not by anarchists but by people who wanted
democracy with a sense of law. Just because people can just about
anything they please does not mean that they ought to.

> FCC v Pacifica Foundation, 438 U.S. 726 (1978)
Fallwell v Flynt, 797 F.2d 1270 (CA4 1986)

We were not discussing whether USSN was a public or private figure and what they must do to establish that they have been libeled or whether they may be able to win additional punitive damages. That much is clear--they are public figures and they would have to prove that someone acted with "malice" and "reckless disregard of the truth" to win their case.

Someone said that the republisher of a libelous statement was equally liable as the people who first made the statement. Someone else said, that's dumb! I asked, Why is that dumb? Looks like it is time for me to dig out that mammouth Law of Communications tome that I was forced to buy in grad school (mass communications, not law) and see if I can learn what I'm sure they tried to teach me the first go around.

I have a couple of questions about discone antennas. I have a
RS discone antenna mounted about six feet above my TV antenna.

The first question: Will adding an antenna to the top of it
(as shown in Bill's second diagram) hinder my reception in
anyway? My main interests are listening to local simplex
channels in the 160mhz area and also frequencies in the
500mhz range that are not so close (15-20 miles at least
and also simplex).

My second question is: If it WON'T hinder reception of those
frequencies, will it improve the reception of them at all?

I lied, there's a third question: Has anyone had any experience
in adding an antenna to a RS discone? If so, anything I should
know before doing this?

BTW: I'm only using 50' of coax so I'm not concerned much with
signal loss from the cable. RG-58/U

Probe's developer claims a max of 80 cps. I haven't seen anything near that (more like 40-45). I run it on a 386 machine and it is s-l-o-w when you are entering freqs and hopping from one menu item to another.

ROTFL!

I've been buying `stuff?' off and on from them for the last 30 or so years *and* have been in 2 different store's `database?' for at least 15 of those. I *still* don't ever get any flyers!! On top of all the time I have been shopping at RS I've also held one of their Charge Cards (In fact I'm a `charter?' member!) and carry a `reasonable?' balance [IE: a *very* low one!] on the account. *Again* I *still* don't get any flyers! Kind of makes one wonder just *where* RS's priorities actually are? I guess that's what happens when the `bean counters' with their worship of the Ghod Mamon ($$$$) take over.

If you would just *SHUT UP* and quit making such a danged `big deal' over this then there probably won't be any `problems?'. What Bill posts is his own business. If *you* don't like it then just either skip past it or delete it. There *are* some of us who actually keep and use the latest versions *because* there *is* some pretty useful stuff in them. (And *if* Bill wants to `tootle his own horn' a little bit... Oh, well... He *did* after all take the time to put the danged thing together.) I suppose that you treat *all* FAQs this way? Not everyone is `ad free' like I expect that you (And a bunch of other Yayhoos who know who they are.) seem to want.

Now... Why don't we get back to the `business?' of Scanning and just let `sleeping dogs' lay? (BTW, I *do* expect that Bill *may* have a few pithy comments to make here about this latest stupidity and I don't blame him. {CHORTLE!} After all... *You* asked for it. {SMIRKLE})

Well... {BSE GRIN!} Why not just mount it upsidedown? My B.I.L. (Brother In Law) did this with a BC760xlt in his van and aside from having to do a little `mental reconfiguring' when reading the readout it worked pretty danged well. (I once facitiously suggested that he could also face it forward and view it in a mirror. {CHORTLE!} He didn't think it was a good idea adding yet another `variable' to the equation. {SNICKER!})

To the pea-brain of Sammy Salesdroid, it probably IS a technical manual.
Consider the (low) intelligence quotient of whom you are dealing with
here. He could probably change a fuse without much problem, but if it
came to installing a coax connector, he'd really lose out.

Jim Finney <jpf@southeast.net> wrote:

>What frequencies is this antenna designed for?

It's not. Not exactly. I mean there are at least six frequencies in its design, which overlap to create a widebandedness. The low end has a "bump" of performance around 60 MHz and the high end "bumps" at 1 GHz. There are four more simple "bumps" in between and a bunch of higher ordered, more complex interactions strewn across its bandwidth.

The Off Center Fed Dipole (OCFD) is not a "serious" antenna, although by and large, it beats a discone by a decibel or two across the bands. Commercial models cost under $30. and you can make a darn good one for under $10; or even for nothing if you have a few things laying around. The OCFD can be a work of art, or it can be two wires fed with a piece of coax.

The OCFD can be the sole antenna for some scannists. Other scannists might roll it up and store it away as an emergency antenna.

The OCFD is just something you do....experiment with....and enjoy.

In message <322ab36c.4120879@dfw-ixnews6.ix.netcom.com> - brer_fox@juno.com (Br'er Fox)Mon, 02 Sep 1996 10:19:03 GMT writes:
:>
:> Does anyone have any info on the system being currently used?
:>Since the latest visit all major traffic has gone trunked (maybe just
:>maybe conventional) and use what looks to be Motorola MTX. 900 MHz is
:>the rumored system. Any info whatsoever is appreciated....

Disneyland Security and Park Operations have moved to Disneyland's new Motorola 900MHz trunked system: 938.4875, .4750, .4625, .4500, .5000, .4375, 4250, .4125, .4000, .3875 MHz

It appears that the data channel may rotate between the first 4 frequencies listed, but this is not confirmed. Disneyland Security "CONTROL ONE" can link different channels together (using touch CRT display on dual dispatch position Motorola CentraCom II console).

Disneyland Security is NO LONGER heard on 461.850 R "blue". This frequency was a high power channel with wide range coverage. 464.4625 R was also formerly called "BLUE" and was also used by Security. It now appears to be called "SLATE" and Indiana Jones ride activity is heard. Maintenance, Custodial, Entertainment, OUtside Vending, Monorail & steam trains, etc., continue to use the UHF radio frequencies.

4060. RS-2006 800 MHz problem pt.2

Newsgroup: rec.radio.scanner
Date: 1996-09-07 00:00:00 UTC
From: merc@cris.com
Message-ID: <32319d11.5006248@news.concentric.net>
Source record: 223983

Thanks to some astute folks here I have determined that I have a problem with the 800 MHz band on my RS 2006.

Symptoms: as you know, in the 869 - 890 range, the correct spacing is 30 khz. Also, should be NFM. My problem is that when searching with these parameters, I'm not picking anything up. If I switch to 5 khz spacing with NFM, I can pick things up; this takes a lot of time to search and, besides, I'd like to fix whatever is broken.

I assume since this problem is in the "forbidden" cellular range, RS is not going to be much help. Can anyone here (Bill Cheek, are you listening to this one?) steer me to a fix?

thanks guys,

jeff

4061. pro 2026 mods/lighted keypad

Newsgroup: rec.radio.scanner

Source record: 223984

Would like to know what mods are available for the pro 2026, variety 11A3.
Have cell mod. Looking for others.

Also, If anyone has any experience with retrofitting a scanner with a
lighted keypad, let me know. I'd like to put one in the 2026. Any ideas?

It just occurred to me that the last specification list I posted for
WinRadio did not indicate that the cellular bands were blocked in USA
models. Celllllular is blocked, and probably is not "restorable" by
any reasonable means available to the hobbyist.

WiNRADiO Technical Specifications (Revised 9/7/96)
==

Frequency range; AM-SSB-FM-N: 0.5 MHz to 1.3 GHz
FM-W: 30.0 MHz to 1.3 GHz
(Cellular bands are blocked in USA models)

Tuning step size (main tuning): 0.5 kHz to 1 MHz
BFO: to 5 Hz

Modes: AM-SSB/CW-FM-N-FM-W

Sensitivity: AM SSB/CW FM-N FM-W
===== ====== ====== ====
0.5 - 1.5 MHz 5 uV 2.5uV 1 uV -
1.5 - 30 MHz 1.5uV 1 uV 0.35uV -
30 - 1000 MHz 1.5uV 1 uV 0.35uV 2uV
1 - 1.3 GHz 5 uV 2.5uV 1 uV 3uV

Image/spurious rejection: 5 - 513 MHz: 65dB
798 - 1300 MHz: 30dB

Dynamic range: 65dB

Signal meter linearity: +/- 5dB

Selectivity: AM/SSB: 6kHz @ -6dB
FM-N: 17kHz @ -6dB
FM-W: 280kHz @ -6dB

Scanning speed: AM: 10 channels/second
FM: 20 channels/second

Intermediate frequencies: IF1 IF2
========== ==========
0.5 - 299.999 MHz 556.325 MHz 58.075 MHz
300 - 512.999 MHz 249.125 MHz 58.075 MHz
513 - 797.999 MHz 58.075 MHz -
798 - 1105.999 MHz 249.125 MHz 58.075 MHz
1106 - 1300 MHz 556.325 MHz 58.075 MHz

IF3
=========
AM-SSB-FMN: 455 kHz
FMW: 10.7 MHz

Frequency stability: 10 ppm 0 to 60 degrees C
Antenna connector: 50 ohm BNC
Audio connector: 1/8" phone jack
Audio output: 0.2W into 8 ohm load

Specifications subject to change without notice.

4067. OPP WEB PAGE new informaton and pages added.

Newsgroup: rec.radio.scanner
Date: 1996-09-07 00:00:00 UTC
From: ronkatz@interlog.com
Message-ID: <3231aad3.5739554@news.interlog.com>
Source record: 223990

I have moved my OPP information from my Ontario Section to 3 separate pages.

You can find it at
http://www.interlog.com/~ronkatz/opp.html

The rest of the web pages addresses stay the same. Remember that you can find frequencies for Emergency Services and more on my Ontario pages at

http://www.interlog.com/~ronkatz

Sorry but I added some graphics to the main page and I'm told that it takes a long time to load for some. I'm working changing it to load faster.

The OPP material was given to me by a reliable source who does not want to be named. I thank him and any others who supply me with any radio related information. Its a pleasure to provide this information to others.

Unlike any book available the web pages can be upgraded at any time to reflect any changes in radio frequencies. This is why you should always find up to date information here where it may take as long as 6 months in some book. Your help is always appreciated in reporting any changes.

FYI: I'm considering adding the DOC data base but this may require moving the pages or a page to a new ISP.

The situation is similar to that if they were talking on a land-line
phone and rebroadcast it. Or look at it this way, if someone calls YOU on
your cell phone and you answer it, YOU are monitoring a cell-phone
frequency, you know. Is this illegal? For some reason, me would tend to
think not.

This page is how you described it only the button identified as "3" only
says "Shift" beside it. It does not say "Decimal" or "Clear".

On the back of the manual is says copyright 1994. Maybe it's just an
old manual although the scanner was purchased no more than a month ago.

You must remember the sales drones. If the manual says that the unit
has a on/off switch, that makes it a technical manual. They even make it
really hard by putting frequency ranges and other common specs for various
pieces of equipment. So in there own mind it is a technical manual. I think a
better term would be a poor reference manual.

I attached a RS CB whip to the center conducter of the discone. Works
great. You need to make an adapter sleve for the connection between
the two antennas. This isn't much problem, if you have the proper
tools. I would send the sleve to a machine shop, if you are not
familiar with drilling, and the use of taps and dies. Anyway, this mod
really improved reception in the VHF range. You could tune the added
antenna to any freq (from about 27Mhz up) that you want.

Garry

Principles aren't of much account anyway, except at election time.
After that you hang them up to let them season.

Friend of mine worked center zone in Kansas City MO for years, told me of a dispatch that went like this: "112, investigate an armed disturbance at such-and-such address...subject armed with a garden hose..." The dispatcher went silent, but didn't unkey. My friend then said to himself, "Did you say a garden hose???" The dispatcher then commenced talking again and continued with "...that's right. I said a garden hose."

He also said that they used to get sent to handle drunks at the bus station, and they always stunk and barfed in the police cars, so no one would say they were in service when dispatch would announce they had one there. One dispatcher voiced something to the effect of "Any car to work a non injury accident involving a bus load of college cheerleaders at the bus station...?" Of course, someone volunteered and she sent them. A few minutes later she advisee that the bus left without making a report, but there is a drunk there that he can handle. BUSTED!!!

True or not??? I don't know, but they are good stories.

>insight.

The fellow does have a keen vision, doesn't he? He's very sick, too,
though.

>But what about those with a *compulsion* to read the damn posts? I mean, I
>keep reading what Cheek, Mackey, Duff and everyone else has to say even
>though they are seldom related to scanning. I can't help myself! It's a
>sickness, I freely admit. Not all the booze or drugs in the world can save
>me from myself. I keep thinking, just maybe one time, one of these guys
>will post something truely revolutionary and I'll miss it! Yes, I know
>that is not going to happen (no revolutionary thoughts and no misses
>because nothing ever gets thrown away in Cyberspace). I'm sick, I tell
>you--sick, sick, sick!

Yes, of course you are sick. We're ALL sick to be monkeying around
here in virtuality. Some are sicker than others, of course. Depends.
Me, I can tear myself away once in a while, because I *know* no one
will post anything of great revolutionary importance to me. Unless it
were way off topic and in some other subject of which I am not versed.
Fat chance of that.

Soooooo, in my sickness, I labor through the day and then this
anticipation begins to well up. It's just an itch at first. But then
it gnaws; Finally it becomes a craving and I have to punch through my
server and rush into this volumnous hall to see who wants to have a go
at me next. I just can't stand the anticipation, it's so keen and
sharp.

Now before you jump all over me for being sicker than you are, you
gotta remember that no one is going to post a revelation to me. I
don't have things to look forward to like you do. All I can hope for
is a worthy oponent; someone who can just threaten the shit out of me
and have me terrified of meeting 'im again.

Alas.....sniff.....it ain't to happen. This is a sleazy ol'
forum where everybody expects something fer free. But my Paw used to

always tell me to put a price tag on things that people want. So when I levy a tax on those who want a piece of my butt, it scares off the worthy opponents and only the stupid ones venture forth not knowing of my tax collectmanship.

So, yeah, we're all sick. Now 'scuse me while I go bait a hook and do a little trolling for an unsuspecting nincompoop to make my day. :-)

I'll see if I can find me something to post for your jollies in the next day or two. What sort of thing is most apt to trip your trigger?

I guess it matters what RS store you go to. I recently went with my friend to get a Pro-51 on sale (for 199$). He purchased the scanner, then the employee threw in a free 1997 catalog. Personally, next time I get a scanner, it's probably going to be a Uniden. RS is ok for small parts and connectors for stereos, but their scanner designs leave something to be desired...

...Like optional CTCSS boards, alphanumeric displays, included Ni-Cad batteries, more memory channels, and better speaker output! etc...

something kinda like:

>>Will a discone really beat an active in pulling in the weak signals,
>>across the dial, all things being equal?
>
>I'd like to say an unequivocal "yes", but I can't. In a low congested
>RF area, the Dressler might prevail over a discone. In a big-city

Any specific discones that you know of and would recommend that pull
in 30 - 900 MHz well (I tried a discone once years back that really
rolled off below 50 and above 500)?

>environment, I don't see how it could. What part of the planet are
>you on?
>
The cold, Mid-MIchigan part <g>. The areas I want to pull in are
local, plus two cities about 40 miles away. My Dressler used to do
pretty well when I was about 50 miles away from Houston in pulling in
Houston signals, but shut down almost entirely below about 50 MHz.

Thanks,
jeff

: What's going on here?

Phil what you heard was the IFB (Interruptable Fold Back) from the station.
ENG and SNG trucks normally dial up these numbers back at the station and
feed it into earpieces for the talent to hear the mix-minus program and
cues from the directors and producers back at the station.
The talent normally just talks back to the station via the audio on the
satellite or microwave shot, which BTW- are normally only one way links.

After the live shot is done they hang up the the cell line and power down
the microwave or Ku-band satellite feed then pack up and head back to the
station.

Mike

>no luck.

Yeah, that supplied antenna is kind of sick. I didn't even mention it
in my review. It's just for the neophyte who has nothing else to use
for the moment.

Your best bet is to make a couple of antennas, one for 500 kHz- 30 MHz
and the other for 30 MHz - 1300 MHz and then manually switch them as
needed. So much the better if you can use Belden 9913, 8214, or even
RG-6 coax so as to get the antennas outside and up on the roof.

>Something I thought of but have not yet tried is to use a VDU video
>cable with a ferrite in case something is being radiated back from
>the VDU. I'm not very hopeful.

VDU's are notorious for emissions, and a ferrite choke on the video
cable can reduce some of those emission. A good bet would be to
borrow another monitor and see if that changes the noise level at all.
Chances are it will.

>Incidentally, I have a Dell Dimension XPS(?) with a P133 CPU
>(129.99 something MHz according to WinRadio). This has three or
>four slots for plug-ins. I couldn't believe the layout which means
>that any "long" cards extend over the CPU.

I suspected as much, but didn't encounter the problem myself.

> In fact, cards have to be inserted such that they go through the heat-sink fins.

That's ingenious! Nice flourish there! Creative!

>Another point is that I get more noise by inserting WinRadio in the one
>slot which does not extend over the CPU. My tuppence worth. John.

That's another good point....to experiment with different slots.

Odd, but I have very little noise here and there are five computers in
the shop and several more throughout the premises, many with the
covers off, too.

Rgds,

Bill

Answer:

I just got an e-mail which says that the Cheeks Guy
has written a correspondence course for this group
which he charges just $.99 for.

It's a course called: Dealing With Innuendo

Chapters Include:

1. Picking your nose is great as you question your
sanity for being in rec.radio.scanner
2. Making sense of the senseless
3. Having oral gratification denied you by "e-mail"
4. You are your own doctor
5. Sickness From This Group is Shared Equally
6. Not Getting It is OK to Admit
7. Being Flamed is Treason.
8. Having Sex While Keying Replies a form of
Domestic Violence
9. Dealing with People Who Are Legends in their Minds
10. Getting Relief From Support Groups
11. Directory of "those who wander" a lot...

there is more, but that is in the next volume....

Just request a copy and where to send your bucks of the
Cheeks Guy....Pennies not Accepted.

Bill Conduit
the "etc" guy

4090. Re: Scanner Buff Arrested for ARSON

Newsgroup: rec.radio.scanner
Date: 1996-09-08 00:00:00 UTC
From: Glenn Hansen <grhansen@worldnet.att.net>
Message-ID: <01bb9daa$731863c0$5584eea5@ghansen.accesone.com>
Source record: 223750

Katz says;

----------snip----------

> What bothers me is that this case damages the credibility of
> those who really are only buffs, interested in monitoring and watching
> from a distance and do not interfere with emergency services.

If you are listening to a scanner and respond to the scene to watch from
a distance there is no guarantee that you aren't going to interfere
with the emergency services. You become one more vehicle/person
in the area that could get in the way. The scannists that chase
emergency calls do more damage to the hobby then the few nuts
like the one you spoke about. It is a bad idea and just gives the
government
forces more ammo to try and take our scanners away. Plain stupid, IMHO.

Glenn

4091. LA Area CB Repeaters

Newsgroup: rec.radio.scanner
Date: 1996-09-08 00:00:00 UTC
From: palota@ix.netcom.com

Does anyone out there have the CB repeater for the greater Los Angeles area (LA County, Orange County, San Bernardino County and Riverside County). Thanks in advance.

Dennis.

4092. Re: Telephone blackbox plans

Newsgroup: rec.radio.scanner
Date: 1996-09-08 00:00:00 UTC
From: eplatt@wco.com
Message-ID: <323303cd.8711152@news.wco.com>

Without leaving his e-mail address, we're supposed to send him a check?? I'll save ya the money. Go out and buy a radio shack pocket dialer. Replace the xtal with a 6.5536MHz xtal you can get from Mouser Electronics (1-800-34MOUSER). Replace the xtal in the dialer with a 6.5536 xtal, and you program one # (or is it a *??) for a nickel, and 5 for a quarter. For entertainment pourposes, yata yata. and it won't work on most phones now...

Your Address (Your User Name) wrote:

Users,
I think it is time you folks lay off my buddy John_Mackey. He
is a cool guy and contributes to this newsgroup all the time. Just
yesterday he gave us these words of wisdom. After reading them I dare any of you to fin
fault in what he says. The following are all
of John's contribution for September 7, 1996. Read them an weep you
losers.

John says;

++++++++++start quotes++++++++++++++++++++++

I have found it interesting that all the Bill Cheek defenders & supporters
are newbies & ass-kissers.

hahaahahahahah, tell us another one Bill, hehehehehheeh

You LOVE that type of shit.

That's true. The things that Bill did to Fidonet ScanRadio is a good example.

hahahahaah right.

That's right, YOU HAVE NO POWER!!! But I might suggest you follow your whn advice
& keep you mouth shut to prevent putting your foot in it again.

++++++++++++++++++ end of quotes+++++++++++++++

Now if these aren't examples of John_Mackey's intelligence I
do not know what more I can do. He is GOD to me.

Can you say Icom, Bill? Our local radio shop has one on their roof.
After talking to the owner of the store, it wasn't a giant leap of
logic, to add a CB antenna, to the top of my existing discone.

BTW, Bill, you say that you NEVER start the flames, you only respond
to them. If that is true, then what is the above post, but an attempt
to start trouble? Or were you lying about never starting it? Maybe,
you are just so lame, you don't know what you are doing?

Now let me give you a clue, Bill. You don't like what I have to say?
No problem. Simply right click on this post, scroll over to "usenet
filters", click on "add kill filter". I think even you, can wade thru
the rest of the job. End of problem. Hey, I did as much for you. ;-)
Had to go back and retrieve this post, since it was so amusing. :-)

Garry

Principles aren't of much account anyway, except at election time.

>
>How hard is it to do?
>
>Thanks
>Jim

Jim,

Most Moto Trunked mobiles can be programmed for 8 or 10
CONVENTIONAL frequencies.

Therefore, as long as the Trunked system you want to monitor
uses that # of channels, or less, you can use the radio to
channel monitor the system.

Drawbacks:

When in the conventional mode, he will not be in contact with
his own Trunked talkgroup/subfleet.

He will be channel scanning, not talkgroup scanning the
trunked system.

Possibility:

Get permission to have the radio programmed on the system. It
can be done...

Drawback:

You will still be off of your system when scanning unless both
are on the same trunked system e.g. both services are provided
on a common system.

In our area, we have some small departments on an independent
providers system, so those also on that system COULD possibly
get a radio programmed to do what you asked about.

It does, however take some clever programming:)

Hope this generated more answers than new questions...

Try pressing the reset button on the front panel (I think it is reset, but I've since sold my 2006 and don't have one to look at). Anyway, this should get you back to the 30khz step sizes.

make sure you are in the proper freq range when pressing the button.

let me know if this works, as I am going from a foggy memory.

>Tom
No (although thanks for the effort!); the problem is that when I am
using the 30 khz steps I can't pick anything up. Only when I switch
to 5 steps can I get anything.

Someone had mentioned that the frequency oscillator may be off; how
fixable is this by the user?

4104. Radio Shack FRS radios

Newsgroup: rec.radio.scanner
Date: 1996-09-08 00:00:00 UTC
From: plukens@imap1.asu.edu
Message-ID: <50va0j$fln@news.asu.edu>
Source record: 223764
Cross-posted to: rec.radio.cb,rec.radio.scanner,alt.radio.scanner

I just noticed in the new Radio Shack Catalog Item #21-1805 their
Motorola FRS 7 channel radio. Didn't the FCC allocate 14 freqs. for
FRS? That'd be like buying a CB with only ch 21-40. What's the deal?
Do they expect you go go GMRS if you want the other seven channels? If I
do go with FRS, I certainly intend to wait until I can buy a 14 channel
radio...

Any information regarding this situation would be appreciated... I had
been awaiting FRS ever since I had heard of it, as short range
communications are the only reason I have handheld CBs in the first place....
But now, I am skeptical, at least with the RS radios....

TIA

The only changing you would like to see Billy Boy is of others
opinion of you. Problem here Billy OLD boy is that no one will change
the way YOU want them to.

>Looks like ol' Katzenjammer just can't give it a rest.......
>
Keep trying Billy you old fart.

By the way Billy I see you've been spending a long time on the
computer "Living here" you really should get a life you know.

What happened you used to do all your replies offline. Now I see
you've been spending up to 6 hours a day. I can see here is one
person who does not have to get up in the morning for work eh Willy?

One would think that after dying book sales on a scanner that is no
longer being made you would look at some means of supporting your
family. Government treating you well Billy?

I've looked at the times of your posts and noticed you get on at about

12:00am and don't give up until around 5:30am.. Sneaking some
computer time from the wife Willy? Must be sleeping all day eh? <TEE
Hee Hee>
Nice to see you have some time in the afternoon to play also.

Tell me Billy, while your spending all this time screwing around and
being a newsgroup god, who's in bed with your wife? Or has she left
you! Looks like your relationship with here must be as good as the
one you have with others here if you spend all this time on the

computer while she's asleep.

Shame shame, Billy

BTW has she had her operation yet? I hear she alredy lost some 20 pounds.

...go ahead Billy old boy, I'll have a few rounds with you. Give me all you got. I'm ready.

> logic, to add a CB antenna, to the top of my existing discone.

Yeah, it's easy to say that, all right. Makes it
SOUND cool, anyhow. Don't tell me it's a CB STORE, too!

Aaarrrgggh!

> BTW, Bill, you say that you NEVER start the flames, you only respond
> to them.

Why, yes, I said that. I STILL say that. :-)

> If that is true,

It is.

> then what is the above post, but an attempt
> to start trouble? Or were you lying about never starting it?

Start? I wasn't aware it had *ended*. :-)

I have no e-mail or newsgroup articles from you calling for
and agreeing to abide a "cease-fire". YOU initiated an
episode of shit with me, and a pretty nasty one, too,
there, Rimmy Baby. For all I knew, we were in the eye of
the hurricane before another "big blow" comes in. You
want a cease-fire, just mention it. But you haven't yet.

> Maybe, you are just so lame, you don't know what you are doing?

Maybe. Would you like to stake a substantial wager
on that proposition? If you're right, you could win big!
I bet Missus Katzenjammer-Rimfire could use a few things
for the babies. ;->

> Now let me give you a clue, Bill.

Yes, you do that, Rimmy Baby..... gimme a clue! :-)

> You don't like what I have to say?

Huh? Did I say I didn't like it? Of course I like
what you have to say, pal. I kind of get my jollies
watching you shoot off your mouth. You're always
good for a jolly. Free, too. That's the best kind.

> No problem. Simply right click on this post, scroll over to "usenet
> filters", click on "add kill filter". I think even you, can wade thru
> the rest of the job. End of problem.

Oh, gosh no. I only put certain kinds of people on my
Twit List. You're the kind I really like. I wouldn't
do that to you, Rimmy Baby. You and your missus, the lady
Ronda Katzenjammer-Rimfire, are the kind who make my day.

If I twitted out you two popinjays, I'd be running back and
forth retrieving your posts all the time.

So I save myself the time and trouble. Masochist, I am not.

> Hey, I did as much for you. ;-)

It's a free country. :-)) But, are YOU a masochist?

> Had to go back and retrieve this post, since it was so amusing. :-)

Me and the boys around the shop here kind of figure
you go back and retrieve a LOT of them.

Heh heh heh heh ..... :-))

I know what you mean. I've got a 200XLT with certain mod's that I've been happy with for years. But I'm looking into an AR8000 very seriously. Great rage, able to be controlled via a computer, PASSWORDS, (but it sounds cool), dot matrix screen, more freq's than I know what to do with, but the price....I'm trying to convince myself that $700 and some change (computer interface, software, etc) is worth it for these 'features'. Hell, I still use an old Realistic Pro-20A for some local stuff.

Anyway, I'm sure if you bought 'this years model' you'd be writing the same message next year, only a few hundred dollars poorer.

Ron, and all,

Since Bill took me to task on this very point, I feel it's only
appropriate to comment that I don't personally agree with flaming,
niether *towards* Bill nor *from* Bill. I do hope you'll reconsider
before going much further.

Not that my view matters to anyone, of course, but as you all have a
'Delete' Key it doesn't hurt anything by my saying it. Besides, since
this is all virtual, I don't exist. You aren't even reading this.
Bill isn't reading your remarks either, they don't exist. So I'm sure
he will ignore them.

If he exists, that is. :)

I was looking through the 1988 Radio Shack catalog and they have on p. 96
the Realistic PRO-27 2 channel VHF-Hi/UHF crystal controlled scanner.

I am looking for one of these with the crystals 155.445 Mhz and 155.805 Mhz.

If any one has on for sale please email.

thanks

>could shoot these fires he monitored on his scanner and responded to.
>
So, I take it the poster of this toaster is in the MEDIA.
Does this buff have press credentials? Have you or your
people assigned him stories to go on? If so, then you are
at fault for not properly representing him in registering
his name with the authorities, I understand this is the
requirement for working press in Canada, and issuing him
some official i.d. that what he does it "chase news".

As for Arson...gee, If you are in the media as claimed,
or others who are in tv land, why not get a copy of the
arrest report, or is this disallowed in Canada? Freedom
of the Press I understand is an "alien" concept up there.

Has anyone interviewed him since being released to get his
side?

Also, if he is getting stuff for sources who have called him
to go get film or video of, where does the govt get off
taking his scanners away and his pager, etc? Or is it illegal
for non-press to listen?

Also, seems that they have a witness which they are not telling
the press about..if anyone has made an inquiry, why not find out
the circumstances of "what led to his arrest?" So he is at fires
before the fire dept....hey most of the time I am there first and
no one has ever arrested me. One fire type official accused me
of possibly starting fires to get coverage of and I went up to
him in full view of a cop and gave him a good karate kick to his
leg....cop came, listened and report made to the fire chief.
This dolt apologized when he was told about my activities as a
photographer.

> Toronto has a radio system called MetroWide Fire Communications.
>It is a fire buffs radio system. Fires are discussed and broadcasted
>to other members for monitoring purposes, canteen truck responses, and

fires for fear of having their equipment confiscated. Has the
guy been charged? If not, then why can the govt. steal his
gear...unless there are laws on the books they are basing this
thievery on.

His wearing official looking fire gear is commonplace for most
people his age who want to get better access to fires and more.
I have known of two idiots who did the same thing...and I know
why they were told to cease and desist from wearing again any-
thing looking official fire affiliation. After I got through
with the police and fire depts in his area, plus another news
photographer doing similar, he had to appear at a police hearing
for "false i.d" of appearing to be a fireman. We both took
video of him with apparal being worn and submitted it with a few
still photos of mine.

He was only 18 yrs. He never appeared at a fire again.
>

> Again, there is no crime in "being their first"...but In Canada,
well, freedom is not what it is in the USA when it comes to press
guarantees....freedom of passage and stuff.

>
> Again, gosh, gee, what did you people do to help him? What did
the listening group do to help him? Why no police report? What
was the charge and who made it? Is this not public access for
access by the news media?

>
> at this case damages the credibility of
>those who really are only buffs, interested in monitoring and watching
>from a distance and do not interfere with emergency services.
>
> You claim to know him but are asking how his case cam eout or
when it will go to trial? Should you not have had the answers to this
before you wrote this "escapist" tale.

What affects him affects you all. I wouild think you would make
it a priority task to "get the facts" ASAP. Or because it don't
involve an employee, who cares?

Your agency and the tv people encouraged him....you are culpable and you owe it to him and your agency to find out more than you have done so far.

Guilt because of who says: or is it guilt by association for being there before the fire dept? "He must be the one" kind of illogic.

There is no freedom here. And seems that this is accepted by those who act not.

Hi everyone,just got back from an air show here in Muscle Shoals Ala,worst show I have ever been to.1st the communications folks had a van setup to handle all the air show traffic and I ask them if I could get their main operating freq and they refused.Sometime they will,sometimes they won't.No matter I just did a search.They said "they did'nt want somebody keying up on their freq".Fair enough but I said I only had a scanner not a transciever."No,sorry".Lesson here, never hurts to ask,bring a scout or similiar freq counter if you want it.It's hard to hit them on a search.
Not much on the ground to see except there was one surprise,a liasion lear jet from the 89th Airlift Wing,457th Airlift Squadron out of Andrews.I think it was a C-21?They were nice folks and when I asked if I could film inside he said crawl on in.I noticed the one of the radio's was set on chan 9,with a freq dialed in of 289.6.Don't know if this is a good freq or not but if you live close you might want to check it.
The rest of it was ok but I'm loooking foward to the open house at Columbus AFB coming up soon.I wonder if scanners will be frowned on there?
Gary B.

The best way I have found is to:

1) Turn off your scanner's scan delay, or set it to 0 seconds.
2) Be ready to hit the Scan button when you hear the "hang" tones, designed to foil scanner listeners (at least for the GE trunked public safety sytem, an maybe others).
3) Go get Police Call at Radio Shack, it does a great job of showing you how you can build a matrix chart to keep track of what frequencies are in use by a system. It's in the beginning of the book.

Yes, I think you could design a scanner to track cellular calls, and for that matter, trunked public service communications. Now, it's a matter of enough demand for a company to come out with one that does not put us scanner buffs in the poorhouse. I say this because I think the technology required to duplicate the trunking following firmware/hardware in a cellphone or trunked PS radio would really drive up the cost of a scanner, perhaps double (??).

It would be another issue as to the legality of purposely following a trunked system (cellular would certainly be illegal). So, this type of scanner would not be sold in the US unless you were in law enforcement or were a technician for a cellphone company or a trunked radio system service provider.

The technology already exists, I think it's called Cell-Tracker, but is not for sale to the public.

Mike

Stuff deleted...

Pretty sincere apology! ;-) I always enjoy apologies that include F*** Y**!
but what do you expect from someone who is STUPID ENOUGH to expect people
to get up and mail him money. These morons always surprise me they don't
read their Internet Providers AUP (Acceptable Usage Policy) Then go out
and SPAM the usenet. These user should consider himself luck that he can
post his sincere apology, as lots of providers whould have just cancelled
his account.

A scanner would make an excellent bug detector. But what type of bug are you looking for? Something Law Enforcement uses or is does it belong to an individual? Give us a few clues.

Regards,
LGS

I've got one of those things. They're from the mid to late 70's, and what interested me at the time was the "extended" coverage to 512 MHz in addition to the aero and marine bands.

It's basically a clunker, with poor to fair sensitivity, but perfect for routine listening, ie close-in comms and or weather. I still use it for that purpose.

The A/B switch at the bottom selects which of the two banks of 20 channels you want to address, hence the name "20/20". In other words, while you can have 40 channels programmed in, only 20 can be active at a time. Kind of a prehistoric bank selector.

Mods? Never asked, not interested, seems not worth it. Owners manual? The thing is so simple, operation is almost intuitive.

It ain't fancy, it just is.

****
****
Before the
Federal Communications Commission
Washington, D.C. 20554

In the Matter of)
)
Timothy Harold Hoffman) In reply, refer to:
Phoenix, Arizona) NAL/Acct. 615HF0001
)
Liability for Forfeiture)

FURTHER NOTICE OF APPARENT LIABILITY

Adopted: August 30, 1996 Released: September 3, 1996

By the Chief, Compliance Division, Compliance and Information Bureau:

I. INTRODUCTION

1. This is a Further Notice of Apparent Liability for monetary forfeiture issued pursuant to Section 503(b) of the Communications Act of 1934, as amended (the Act), 47 U.S.C. 503(b), to Timothy Harold Hoffman for the willful violation of Section 301, 303(n), and 333 of the Communications Act, 47 U. S. C. 301, 303 (n), 333 and Sections 15.29, 95.413(a)(4), 95.413(a)(6) and 95.426(a) of the Commission's rules, 47 C.F.R. 15.29, 95.413 (a)(4), 95.413(a)(6), 95.426(a). The violation resulted from Timothy Harold Hoffman's operation of a radio transmitter on amateur radio service frequencies without a valid license, failure to allow inspection of the radio station by authorized FCC personnel, willful and malicious interference to radio communications of licensed stations and operation on CB channel 36, 27.365 MHz, to transmit one-way communications and material to amuse or entertain.

2. The appropriate amount of forfeiture for this violation is $6,000.

II. BACKGROUND

3. On May 14,1995, agents from the Douglas Field Office of the FCC's Compliance and Information Bureau (CIB), using mobile direction finding techniques, detected radio signals on citizens band channel 36, 27.365 MHz J3E (lower sideband), coming from an antenna located at 911 West Highland Avenue, Phoenix, Arizona. The transmissions consisted of retransmitted signals from an amateur radio service repeater on 147.24 Mhz. These were signals received by Mr. Hoffman, who then used radio transmitting equipment

to re-broadcast the material received. The Commission's agents observed the following violations from 8:05PM to 8:50PM MST, and from 8:55PM to 9:15PM MST: transmissions of one-way communications, which are prohibited by 47 C.F.R. 95.413(a)(4), and transmission of material to amuse or entertain which is prohibited by 47 C.F.R. 95.413(a)(6).

4. On May 15 1995 agents from the Douglas Field Office, using mobile direction techniques, detected radio signals being transmitted on 146.34 MHz, coming from an antenna located at 911 West Highland Avenue, Phoenix, Arizona. The operator making the transmission used the amateur radio service call sign N7ZZT. In this connection, the agents checked FCC records and found that this amateur radio service call sign was not issued to Mr. Hoffman, and no amateur license has ever been granted to Mr. Hoffman. Transmissions were observed at 7:44 PM and 8:21 PM MST. At 8:21 PM MST, after positive direction finding results indicating the transmissions were being emitted from Mr. Hoffman's residence, the FCC agents attempted to inspect the radio station at 911 West Highland Avenue. The adult male that came to the door admitted to being Timothy Hoffman and did not allow the agents to inspect the radio installation. Mr. Hoffman would not confirm or deny the radio operation when asked by the FCC inspectors. Further transmissions from the residence ceased immediately after the attempted inspection.

.
III. DISCUSSION

5. On June 26, 1995, an Official Notice of Violation (NOV) was issued by the Douglas Field Office to Timothy Harold Hoffman. The NOV advised Mr. Hoffman of the following violations:

Rule Violated Description

47 U.S.C. 301 Transmitting on Amateur Radio
Service frequencies without a
valid operator or station
authorization.

47 U.S.C. 333 Willfully and maliciously
interfering with radio
communications of licensed
Amateur Radio Service stations.

47 U.S.C. 303(n) and Failure to allow station
inspection by FCC personnel.
47 C.F.R. 15.29 and
47 C.F.R. 95.426(a)

The Douglas Field Office received a response to the NOV from Mr. Hoffman on July 5, 1995, in which he admitted he was responsible for the violations.

6. The NOV issued by the Douglas Field Office met all of the statutory requirements for a Notice of Apparent Liability set forth in Section 503(b)(4) of the Communications Act, 47 U.S.C. 503(b)(4). Specifically, the NOV identified each provision of the Communications Act and the Commission's

rules violated by Timothy Harold Hoffman, the facts upon which the charge for the violations were made, and the dates on which the conduct occurred. We are issuing this further notice to notify Mr. Hoffman the amount of monetary forfeiture imposed for the violations at issue. Based on a review of the facts and in light of the factors outlined in Section 503(b) of the Act, we believe the appropriate amount for this violation is $6,000.

IV. ORDERING CLAUSES

7. Accordingly, IT IS ORDERED, pursuant to Section 503(b) of the Communications Act, 47 U.S.C. 503(b), and Section 1.80 of the Commission's Rules, 47 C.F.R. 1.80, that Timothy Harold Hoffman IS APPARENTLY LIABLE FOR MONETARY FORFEITURE in the amount of $6000 for willful and repeated violations of the above rules. The amount specified was determined after consideration of the factors set forth in Section 503(b) of the Communications Act.

8. IT IS FURTHER ORDERED, pursuant to Sections 1.80(f)(3) and (h) of the Commission's Rules, 47 C.F.R. 1.80(f)(3) and (h), that Timothy Harold Hoffman must pay the monetary forfeiture amount of $6,000 within thirty (30) days of the date of release of this order or file a written response showing why the forfeiture should be reduced or not imposed. Any written response must include a detailed factual statement and supporting documentation. Forfeitures shall be paid by check, money order or credit card drawn on a United States financial institution payable to the Federal Communications Commission. Please place NAL/Acct. on the remittance and mail it to:

Federal Communications Commission

P. O. Box 73482

Chicago, IL 60673-7482

Send written responses regarding why the forfeiture should be reduced or not imposed to:

From the FAQ, "BUYING A USED SCANNER RADIO,"

BC220 (Electra): 1979 vintage. 20 channels. Reasonable
number of features but 20 channels doesn't seem enough.
Service Search for Marine and Aircraft. LED readout. Good
scanner, but tinny audio.

BC20/20 (Electra): 1981 vintage. Similar to BC220 but with
40 channels and different CPU circuitry. A maximum of 20
channels can be scanned at one time. Reasonable number of
features. Service Search for Marine and Aircraft. LED
readout. Good scanner, but tinny audio.

> For instance what is the a/b switch at the bottem for?

Selects between two sets of 20 channels each, hence the name "20/20."

> Are there any mods for this radio.
> Where might I obtain a manual for this radio? Thanks

Try Electra Corp., phone (317)326-4419, or Electra@trader.com,
or 71722.40@Compuserve.com. See my Scanner Equipment column
in September 1996 Monitoring Times ("Electra Corporation Lives").

> Have your heard of the C. Crane Company?

Yes. Nice little company, too.

> They have a mod. kit for the
> BC9000xlt with video + parts for cell restoration, cost about $32.00
> delivered. I was wondering if you know of it and if it's legit.

I would ask if it is the "virtual downconverter" thing, and if it is,
then I don't think it's worth a hoot. If it's something else, then
I'd need to know what. This idea introduced by Steve Donnell called
"virtual downconverter" is easy enough to do in most cases, and it
does work - no question about it - but it's an exercise in futility
in trying to operate it with any degree of efficiency and
understanding of what's happening.

> I ordered it today and am a little skeptical as I have not heard of anyone
> using it. They told me that the kit has been around since about Feb. of
> this year. Any comments would be greatly appreciated.

Well the Crane Co. is a decent little company, but lots of companies
get pressured into carrying things they know nothing about, so I
really can't tell you more right off until I know what it is.

> Also do you have a ftp site with anything on the BC9000xlt?

No, I know of zilch there.

Rgds,

Bill

>500mhz range that are not so close (15-20 miles at least
>and also simplex).

It won't help that part of the band either, though.

>My second question is: If it WON'T hinder reception of those
>frequencies, will it improve the reception of them at all?

Depends on the antenna that you add to that 5/16" stud on top of the RS Discone. I suppose it could enhance reception if you installed a VHF-Hi band whip. But I've never done that. If you add a slightly lengthened CB whip, then it will have no effect at VHF-Hi and up.

>I lied, there's a third question: Has anyone had any experience
>in adding an antenna to a RS discone? If so, anything I should
>know before doing this?

I only developed and introduced that mod to the RS discone in 1987. Yes, I did it. and the main thing you need to know is that stud on the top-hat of the discone is a weird 5/16" thread that won't fit a dern thing in the world. To make it work, I'd hunt around the hardware stores for a 5/16"-3/8" female union. Then get a 9-ft stainless steel CB whip and cut it shorter to favor whatever part of the VHF-Lo band that trips your trigger. 4.5-ft would resonate it at 54 MHz. I wouldn't go much shorter than 45", though, if you want better performance down around 30 MHz or so.

>BTW: I'm only using 50' of coax so I'm not concerned much with
>signal loss from the cable. RG-58/U

Ummmmm, you're going to lose over 6-dB of signal at 500 MHz with 50-ft of RG-58. Now 6-dB is 75% of the signal lost. Down the drain. 6-dB is more than enough of the difference between hearing and not hearing.

Even 2-3 dB makes that kind of a difference. You sure you're not concerned?

The specs are there now. Just as soon as I could get them. Posted twice, actually. You must be blind in one eye and can't see outa the other. Or is English not your native language?

>Bill, you wrote "What WinRadio is a world-caliber radio". Get a clue
>world-caliber is marketing hype. To lead off your review with this
> ^^^^^^^^^^^^^^
>kind on BS sets the tone for the entire report! Take all the umbrage
>you want, ignore the facts.

The article is utterly loaded with facts. And since I am not the marketeer, it ain't marketing hype. It's what I think, Ignats. You don't like what I think, that's one thing. But to swagger out with your pseudo-intellectual innuendo is quite something else. Simple, fella, I like the radio. I'm enthused and excited about it.

And yup, WinRadio *is* world-caliber. There ain't nuthin like it in the world. It's a FIRST. That counts.

>Bill, maybe you should reread your spew. Here are a few examples of your
>trash as reminders!

>"I'm here to tell you it's a hunk!"

That was in reference to the mass/weight of the card, a "hunk". Read the article again. You missed the context. You're on a fault-finding mission now and can't see the forest for the trees........

>"This is cool!"

Yes. But you left out the context again:

| On the above screen, you see a setting for "Frequency Display |
| Offset". This is cool! |

What is your problem with that? Why is a "cool" feature so against your grain to express that way?

>"A very nice flourish!"

Yes, and again you conveniently neglected context:

| This setting permits calibration of the main display to show |
| the actual frequency being received; not the receiver |
| frequency. A very nice flourish! |

What's the problem there, Dung-Tongue?

You attacked those three lines? Out of 725? What about the other 722? All trash, as you say? Obviously, I didn't hit your resonant chords, but it sounds like I might have jerked a knot in your rectal cord. Where are you coming from, Mister Peter Amateur Radio Operator Trapp KD4CN? I'm getting mighty curious now......

>You, a journalist what a joke.

Now you've descending to depravity. So what are YOU, Mister Peter Amateur Radio Operator Trapp KD4CN? Let's examine YOUR frame of reference.

>> All the rest was "meat 'n taters". Not hype. Not marketing.

>"meat 'n taters", your article contains none.

Ummmmmm.....do you know how to read? Let's establish that first.

> Bill your might think your a journalist, or a hobbyist but in reality
> your legend in your own mind.

Do I detect little green twangs of envy coming out of you, Mister Peter Amateur Radio Operator Trapp KD4CN?

>I'll let the record speak for it self.

That would be nice. Let's have a look at YOUR record, too, what say?

>Bill Cheek wrote "I did not report any specs because I did not know any
>specs."

>nuff said

But they're there now, Numbnuts. So what. Let's get back to the hype and your kindergarten pseudointellectualism. I'd like to know where you're coming from. I REALLY would like to see some constructive criticism, but c'mon, dude.....you're being kind of adolescent about it. Are you a teenager, or a pre-teen, by any chance?

Or....are you an OS/2 Warp user by any chance?

Obviously you don't like me very well..... 'Sniff....

>Last thing, just wanted to say, "I'M SORRY!!!"

Well, it wasn't one of the more brilliant things you could have done, that's for sure. There are a lot of people in this old world who lay in wait for some fool to come along and do something stupid. Then they pounce on the poor, unfortunate victim and beat the snot out of him.....all for being stupid.

It's one of those things. You do something stupid, and you can expect a bunch of vultures to descend on you like stink descends on shit. But don't feel bad. You can do something smart, too, and people will still try to beat the snot out of you.

Best thing you can do for yourself is to develop a thick skin; and sharpen your teeth and claws. And carry a great big club. Put a price on yourself and extract a toll for their pleasure of whopping you. And don't do stupid things. You're going to get beaten no matter what, so you may as well err on the side of intelligence.

Of course, all this is my humblest opinion, and it could be wrong, I suppose. Some imbecile will probably go to the time and trouble.

FWIW.

> been liable.

You can't say for sure that case law does not support it because a lot of
what goes on in Cyberspace does not fit neatly in existing laws.
Copyright, porno, privacy, free speech, computer law etc. are all being
poked at and tampered with as a result of the events happening in the
on-line world. Not necessarily changes for the better, either.

The big issue these days is whether on-line systems are like the phone
company (merely a conduit of information and thus not responsible for
whatever goes on) or like newspapers, TV and other media outlets
(publishers of information). The other day, a judge said, at least until
the case is settled, that AOL could not block junk e-mail being sent to
its subscribers. In that judge's mind, AOL is like the phone company and
could not block the conduit to its subscribers. Obviously AOL disputes
this. But it could go either way, in which case, list maintainers might
find themselves more responsible for what the subscribers say (but I doubt
it, personally)

Penney's still has catalogs, and they charge $5 for them. But if you buy
something from the catalog, you get this back, and possbily more. I can
easily see that it COSTS them $5 to print the thing, if they just gave
them away, someone could come in and take 100 of them and use them for
doorstops, etc. They want to make sure that someone who takes one takes
only one, and that they have a reasonable intent to buy something from it.

The best RF "bug detector" is a spectrum analyzer that can "sweep" the useful RF spectrum in a fraction of a second. But you're looking at a $60,000 instrument, too.

A scanner is, more or less, also a spectrum analyzer, but not nearly so sophisticated. The PRO-2004/5/6 scanner series takes about 90-mins or so to sweep or search the 25-MHz - 1300 MHz spectrum.

The answer to your question is a qualified "no", however for narrow band bug searches, the answer is a qualified "yes". A scanner would certainly be in the bug sniffer's arsenal, but if that's all he has, he ain't gonna find very many bugs. If any.

I just went to a RS store yesterday in Richmond, VA and after purchasing a few inexpensive batteries asked the clerk for a free catalog. He gave me the catalog (no charge).

Thanks to all who posted the possibility on this newsgroup--I probably wouldn't have asked the clerk if I had just seen the catalog container on the counter with the price of the catalog clearly marked on the cover of each.

When I asked the clerk he told me that the catalogues were free because the management listens to customer input. I also noted that I was only asked my name and address when I asked for the free catalogue--after I had completed the purchase. I was not asked for my name when I made the purchase--another change!

Thanks to all!

4175. Random Thoughts About the Upgrade Bug / Scanner Features

Newsgroup: rec.radio.scanner
Date: 1996-09-08 00:00:00 UTC
From: dber@tiac.com
Message-ID: <3232d725.6540081@news.tiac.net>
Source record: 223835

I was just sitting here taking a look at the latest RS and Grove catalogs and find that my eyes keep pouring over the specs for this years latest offerings for scanners.

It's amazing how a scanner you purchased just a year ago can begin to look a bit faded when compared to today's new model. Actually, many are virtually the same with just a few differences, but since you don't own the new model it "feels" like your missing something. In fact, I know that some of the new models of radios may not compare favorably to yesteryears models but it still doesn't seem to stop the upgrade bug from hitting me. It seems like scanner manufacturers can always find one more thing to throw in to make you think... hmmm this might be nice to have...

A few more memory channels here... a rotary tuning dial there... perhaps weather alert... a slightly better speaker... and a lower price... it all adds up to thinking about an upgrade (or side-grade as the case may be). Would the new models make my scanning more enjoyable... maybe. Would it let me scan more... probably not. Would it be worth the cost to upgrade and sell old equipment... probably not.

Although I did not buy a top-of-the-line scanner for my base unit, I wonder if those who did still have this thought process when new models arrive in stock?

I suppose as I enter my second year of scanning these new models will keep arriving for me to ponder. And all through the mail no less.. very convenient. I guess one of the nice things about scanners is that they have some chance of breaking over time and instead of a repair one could always use the repair cost to justify the upgrade!

Also, I wish "standard" features on scanners included:

(1) Temporary Lock-Out - this button would lock out a channel for ... say... an hour or until the unit was next turned on. I have often locked out an annoying channel because someone was sitting on the PTT or was having radio trouble and forgot to unlock the channel later that day. Some channels (like weather, TV audio) would still benefit from permanent lock-out.

(2) Programmable bank-sizes. The Yaesu FT10R 2M Ham rig has this feature which allows you to shift your bank boundaries for greater efficiency in programming. For example, a "standard" 200-channel scanner typically has 10 banks of 20 channels. It would be nice if you could make each bank a different size to maximize your breakdown

of different types of scanning. I may have only a few EMS frequencies but many police and fire. A programmable bank size would easily let me optimize my scanning.

Good scanning and take care,

Dave Bernazzani

>What about models shipped elsewhere??

There is an international model where nothing is blocked.

ALso there is another spec change.... the scan/search STEP SPEED
is 50-cps, not 20 as I reported from an older spec sheet.

> maintaining the list is a form of moderation.

That is an interesting concept. I wonder if wannabe moderators know of the legal jeopardy they're in? Where some snotball can sue the hell outa them at the drop of a hat? And I wonder if participants undertand that to the extent that a moderator will censor or reject anything that could get his ass in a sling, and not just off-topic material.

I wonder if the public knows what it is getting itself into with this moderator business? It ain't gonna have anything to read before it's all over and done with.

USSN's mere threat of a lawsuit is enough to scare the bejeezus out of a self respecting moderator and list server.

Whooooooey!

larrym@shore.intercom.net "Larry Murphy" writes:

Hi Larry,

> Need any Mods for the RS PRO 60

To restore "full coverage" ?

As with most of the most recent RS (mfr by Uniden & GRE) and Unidens own sets the frequency "coverage" is controlled by the main IC rather than a Matrix of Diodes or similar as on some earlier sets.

The US PRO-60 uses a CPU that has the US cell frequencies blocked out, the version sold here in the UK and elswehere in Europe uses a different CPU (the only different component between the two "models") that does not have the frequencies used by US cellular blocked out.

The only way to restore the frequencies used by US Cellular and allow keyboard entry is replace the main IC (a 100 pin'ish surface mount chip). The PRO-60 however does not have programmable increment steps and you would find if you did replace the IC then it would step through the 800MHz frequencies in 12.5KHz increments. US cellular uses 30KHz.

Hope this helps.

I have the unit, and have not heard of any mods. If it follows Bearcat equipment, cell is permanently blocked at the EEPROM level, and images of cell are freely available fron 896-916 Mhz.

The only "mod" I'm aware of is:
To silence the loud beep when turning the unit on, press one of the service search buttons while powering up the unit. The loud beep will not sound!

Very good point, Patrick. My wife is an EMT and also a ham. She has complained to me in the past about people with scanners getting in the way. She cannot tell how many are actually hams because usually they are only holding scanners. Some have other hand-held equipment, but she can't tell for sure if they are hams, CB'ers or just using other commercial frequencies.

My friend Mike, who is a fireman and also a ham has bitched and moaned about the same thing. He does not care for on-lookers at all, but his pet peeve is the hams who whip out their ARES cards and act like they have some authority at the scene, when all they do is get in the way. He says that they have plenty of communications in most circumstances, but when those rare moments pop up, they will ask for assistance. Sort of a "Don't call us, we'll call you" thing.

Steve, WA3RVT

Message-ID: <DxEzzw.Eux@freenet.akron.oh.us>
Source record: 223849

To anyone in the LOCAL Akron area (Cleveland, Canton) I have
a pair of Whafedale Diamond III bookshelf speakers that I would
like to trade for an 800 MHz handheld scanner. Prefer a Pro 39,
Uniden Sportcat or Uniden BC700A but will certainly consider other
800 meg models in good condition.

The Wharfedales are very compact, bookshelf speakers (about 9 by 8 by 7)
and are ideal for small rooms or as surrounds in large rooms. They handle
100 watts and have 4 in. woofers. Removeable grills and drivers make
mods a snap, though I haven't done any myself. This model can still be
found in certain circles but Wharfedale dealers are kinda scarce.
These speakers look like new and orig. sold for $300. My price is $120
for the pair or LOCAL trade for the right scanner.

Thanks for reading.
Mike

Steve Donnell published an 800 MHz expanded reception
modification for the BC220XLT/BC230XLT
in the January 1995 issue of the RCMA Scanner Journal.

Given the similarity between the BC220XLT/BC230XLT
and Radio Shack PRO-51, I suspect it could be applied to the
PRO-51 as well, though I don't have a Service Manual for
the PRO-51 to confirm it.

4198. Risks of scanner operation on aircraft - IEEE paper reference.

Newsgroup: rec.radio.scanner
Date: 1996-09-09 00:00:00 UTC
From: Ian Sherlock <ian@micro.ti.com>
Message-ID: <3234ACC3.5942@micro.ti.com>
Source record: 223647

The subject of the safety risks of scanner operation on aircraft comes up from time to time in this news group. For those interested there is a paper in the September 96 edition of IEEE Spectrum magazine describing some of the issues :-

"Do Portable Electronics Endanger Flight ? The Evidence Mounts"
Tekla S. Perry and Linda Geppert
IEEE Spectrum Sept 1996 Page 26
Available to IEEE members on the web at http://www.spectrum.ieee.org

The paper focuses mainly on laptop computers, but does refer to other portable electronic devices (PEDS). There is a description of the process for defining PED regulations and a review of the propagation of RF signals generated within an aircraft passenger compartment. Incidents where PEDs have impacted the operation of aircraft navigation equipment are also described.

The reference section points to the Aviation Safety Reporting System at web location http://www-afo.arc.nasa.gov/ASRS/ASRS.html

Hi. I am interesting in buying a scanner to hear whats going on. This stuff is new to me, and I was wondering if anyone could help me out. I am looking for a good scanner for $100 or under. I would prefer a handheld also. Could someone just explain to me how many channels is suitable, frequencies etc? I am interested in having the ability to listen in to most everything, plus aircraft. I have *no* idea about any of this, and would appreciate some guidance. And also, just curious - how far can a scanner receive from?

You can email or post back to this group, but *any* help would be greatly appreciated! Thank you!

Mike

How many 'fleets' or 'subfleets' would be sufficient?

Would a combination tracking and scanning receiver be preferable
to dedicating, say, your 2006 to the task?

The next question is how would you obtain the call group codes and
freq codes as they appear on the setup/control channel?

Would a price of tag of $300 for a kit to add to an existing PRO 2006
be too strong for most people?

I have found problems with the priority scan feature. If you program any other channel besides the first channel of the bank as a priority, when scanning the unit will get hung up. Uniden will not acknowledge this problem.

Uhh, thank you, but I am quite capable of (self) controlling the articles which I read and do not read. In other words, I moderate my own reading, and I would prefer not to have anyone else do this for me. I have gotten to the point (for the most part) that if an article has a title indicating it is a part of the flame war, or is written by PjB, Cheek, Duff, or Mackey, (et al.) I ingore it (and hope I haven't missed a relevant contribution). Now, if the intention is to start a *new* moderated group, I suppose I might start reading that one, too... But I like this group (and my self moderation) just the way it is....

Do you realize you could make 240 local calls with the same amount of
money? You could make a few long distance calls with them too. Plus,
with how cheap the prepaid calling cards are now, I think it would be
stupid to pay way too much for a box that won't work on most phones
anyway.

Actually, I've seen a lot of PD's trumpeting "digital" radio, Like
LAPD and Phoenix. "Digital" being a relative term. Yes they have
Astro-Digital, but are still using good old analog voice. It seems
that APCO is having problems with their standard, like it was (is)
outmoded before it got off the ground. Phoenix is still broadcasting
on their VHF channels.

There are definate problems with digital (packet) transmissions to
send voice, and I doubt that they'll be overcome soon, so don't expect
to hear much different from your local PD radiowise. One major
problem with high speed digital transmissions is multipath distortion,
and the only practical way to overcome this is with FIXED directional
antennas, and this is hardly practical in law enforcement situations.
Major infrastructure improvements (read massive $$ influxes) and a few
technology leaps are needed to make this scheme (scam) a reality. I
think this is a much bigger sham than Trunked Public Safety (800 mHz)
was on the taxpayer. We're buying ANOTHER HIGH DOLLAR TOY for the
police that will give NO improvement in police service. In fact, I
forsee much bigger problems in communications with the new system than
with traditional analog systems. Heck, the Maricopa County Sheriffs
Office here in Arizona can't even engineer a system so cars can talk
to each other in the same parking lot! Arizona Taxpayers footed the
bill for a microwave state-wide link for DPS that they NEVER even use!
Millions of dollars was spent on this in the 1970's and 80's!

Oh well. We recently had a case (Metro-Phoenix) where young licensed HAM radio operators were busted for faking police distress calls on police frequencies with modified HAM equipment. I think that most rational people realize that one or two bad apples in a bunch do not necessarily reflect the attitudes or actions of a whole group. And if they're too dense to understand that, there's little we can do.

From what I've heard and seen, the most likely serial arsonist is a person who likes fires. Who likes fires? Firemen. In most of the notorious serial arsons in the U.S. the arsonist turned out to be a professional or volunteer fireman. When I lived in Toledo, Ohio the FD (and police) went on strike, several fires were set by striking firefighters who then impeded citizens' attempts to battle blazes. In fact, some firemen went to jail for this. Should we lump all (union) firefighters into this category of dorks? I hope not.

The UBC manual is copyright 1995 although perhaps they have enough "1994"
versions for the BC-3000XLT to keep them going for a while !

Not that it really makes any differennce but if your s/n begins 55 is
was made in 1995, 65 then 1996.

Conclusions:

Billy you should get a life.
Spend more time with your wife.
Write a book on Internet Life
Get some sleep.
Take a shower.

Most of all, Seek professional help.

Go ahead have the last word. This is after all your life. I understand you must protect your way of life. You have nothing else. You really are the looser here.

By the way, I understand the picture of you and your wife is quite old. I guess she's not around anymore eh? Don't blame her. But I hear you and her exchange a lot of mail through the internet. What's her name now...John Mackey? How did the operation go?

I don't know anyone who shows everyone a 20 year old picture of his wife. Admitt it Billy your a hermit who makes a petty 2 dollars per book and collects welfare. Your wifes out of the picture and you have nothing to live for.

Why not spend some time and write a book about how to get your life back in order.

I'm sure others here will be interested. <GRIN>

I think there is a song about you. It goes something like,

"I"m a looser baby, so why don't you kill me"

sound familar Billy?

I talked to someone in the law enforcement in about 94, and he
confirmed this. I don't know if its a signal that is sent, or if its
something in the ESN, but since it is relatively easy to get into
program mode on most phones, I don't think thats it.

The only thing that is certain is that people love to sue and they do it at the drop of the hat. Last summer, a FedEx guy came to my house to deliver a package and my beagle (a real wuss, too) ran out of the house and jumped on the guy and scratched his leg (he was wearing shorts). He came in the house, so he could wash his leg and put on a Band-aid. Next thing we know, he's suing us for $10,000! Claims that was his medical expense... Thank God for homeowner's liability insurance. The insurnace company's lawyers and and his lawyers are battling it out now (the FedEx guy refused to settle for $1000). If you figure what they are getting paid to handle this over the past year, it will amount to a small fortune all because some joker thinks that suing is a better way of earning a living than delivering packages.

Thanks for responding to my article and I appologize for my slow response (I was on vacation at Hilton Head Island, SC dodging hurricanes).

The values you get are similar to the ones I got except for the charger so I guess I'll keep using the battery pack as it seems to be working.

I picked up six AA batteries from an electronics store. The batteries don't have brand name on them but I believe the box he grabbed them from said Sanyo. The batteries were approx $3 a piece so I ended up spending $18 for them and it was not easy to solder them to each other so I'm not sure it was worth it to save $17-22.

He may be speaking to the vessel's bridgehouse on either of 2 low-power
freqs for local control of the vessel (156.775 or 156.825).

You might "search" the entire marine band (minus Coast Guard) just to be
sure (156.250-157.025). You might hear him there on a number of "port
operations" freqs.

>soon-to-be sale involved. Wy argue over a catalog? Customers are lost
>over it.

Tell you what "your user name", I too am a Radio Shack employee
(corporate, and since 1978 in sales) You'd better read your POS
memos more carefully. The release for the catalogs and the catalog
rollout meeting EVERY DISTRICT HAD TO HAVE, said you could
give the catalogs away free to good customers. That means any
customer with a current flyer in their hands, anyone in the name and
address database on the POS system. (it purges their names after six
months of no activity anyway), or someone who is buying more that
a $1.39 pack of fuses for that CB radio they picked up at a garage sale!
(and you could make a case to give them one too since they could be
a potential sale of mounting brackets, antenna, cable, external speaker,
new microphone, SWR meter, etc.)

Truthfully, ANYONE that comes into my store and even asks for a
catalog gets one for free. I scan it on the POS, the zero the price,
and get their name and address in the system. Commercial customers
get two or three catalogs almost automaticly. This is also why my
$$/hour last paycheck was around $119/hour and my lines per ticket
was 2.11! What was yours????

I do try to keep a mental track on who I have given a catalog to. I
don't want to give the same person 3 or 4 catalogs (one for each
bathroom they frequent, I guess) Quanitities are limited and we want to
get them into the hands of the people that will do the most good. If
someone does get 3, no big deal. I may not be too happy about it, but
I will almost definitely see them in the store MANY times before next
August.

Customers are your bread and butter. If you don't want to help them
get what they need, send them my way. I can use the commission....

>before they do.

Going after the wrong excuses....this has very little to do
with why he gets there faster. Some, but not much.

How big a city or town is this spot?

How many fire houses are in that town?

The lower the number the more time it takes to get to a fire.
Where does he live in relation to the fire? OR is he mobile
most of the time (of course, showing off his psychedelic auto)
looking for thing to do?

Don't forget, fire engines are also out on medical calls, water
running from floor 3 down to floor one....auto fires, etc. the
fact that he is fast is that he don't go to these other calls.

How far spaced apart are the fire houses?

Just because he gets there "before the fire dept" does is no
cause for "arresting him" because of his ability to get there
with more ease and timeliness....first learn to walk in his
mocassins before you cast aspersions as to where his feet have
been .

People...think more. It's a good exercise.

>Item 1, the matching transformer, should have the 300 Ohm terminals or
>wires to the dipole elements, right?

Right. But it's fairly obvious when taken as a whole. Everything was
labeled and identified.

>The coax is just _one_ cable, right? The diagram gives the
>appearance a double coax run. :)

That's why I like REAL graphics, photos, and drawings. ASCII leaves
too much to question. But yes. just one coax run which mates with the
Type F female on the matching transformer at the antenna end and with
the Type-F to BNC Adapter at the scanner end.

>Of more technical interest, what's the approximate frequency range of
>this assymetrical dipole? Had a chance to sweep the VSWR on it?

Frequency range is very complex, but generally encompasses 60 MHz to
about a GHz or higher. The plot of its performance will look like the
surface of a stormy sea, but then so does a discone for that matter.
The VSWR of an OCFD antenna would be much too complex to discuss here.
Let's just say that it would not be good for transmitting. Definitely
don't be concerned about it for receiving purposes.

Rgds,

Bill

4244. Re: Scanning 800 mhz trunked systems

Source record: 223721

Here in Columbus, Ohio, some fellow was arrested for having Motorola radios that were programmed to follow CPD. He now sits in jail; the city claims the only way he could have programmed the radios was to have stolen the ID's that the officers log onto the system with (claim supported--he had 13 ID's, including the Chief's ID). Since he will not talk about how he was able to get the ID's, Motorola is investigating because they hadn't anticipated anyone being able to do that.

In essence, I think that if anyone had a radio that could follow trunked systems (at least in Columbus), you would most likely end up in jail.

I'm selling the following: (Prices Lowered 9/9/96)

AOR 2500 - was $400 obo -> now $375 obo
TRIDENT 4500 - was $400 obo -> now $375 obo

Or will trade for
AOR800 or PRO 2006 or PRO 43 or C508A or WS1000

Both are in excellent condition.
These are desktop/mobile units
Full Cellular, AM/FM/NFM/SSB

OTHER STUFF:

ICOM 2GXAT 2m extended RX - $200

2 RS TRC-207 40 ch handheld CBs - $85 for both.

Bearcat 560xlt 16 ch scanner - $60

E-mail any questions.

>still try to beat the snot out of you.
The people who descend are JUST as stupid...

O.K. O.K. I'm gonna continue the little flame war.

I think people who BITCH about chain letters all the time are even stupider
than the people who send them. (Not that I like them chain letters either...
mind you).

Time:

They complain about their precious wasted time, but somewhere along the line
they must of gotten some extra vacation days or a promotion or won the lottery
because they sure as hell have plenty of time to write a detailed message
back flaming the original poster.

Bandwidth:

No, no, NOOOOOO not a two page ASCII text letter! OH MY GOD HE EVEN SENT 100
COPPIES OF IT!!!!!! NOOOOOOOOOOOOOOOOOOOOO. Get real, I AM a usenet news
admin and I can tell you if you want to fight a righeous battle to reduce
bandwidth just get people to stop posting "me too" all the time that would
probable reduce bandwidth 100x more than eliminating chain letters. Or get
people not to quote as much. Help people stop spamming on replies by accident.
Chain letters do use bandwidth but they are the least of the
internet's bandwidth problem.

Money:

This ones just knocks me out. A single letter posted to usenet (even
100 letters) has got to be about the cheapest single thing in the whole world.
Now I'm not talking about what it cost the user (i.e. monthly internet fee,
computer, phone bill,... etc) but rather the cost to us in taxes or whereever
the hell you think you're paying for his chain letter. It would probably cost
you 100x more to run one of those $.06/year green-glow night lights than it
would to send a few usenet articles on the already existing system.

People just flame too much because it's soooo easy. Think about it.. do
thousands of people write J.C. Penny nasty postal letters every time they
receive an unwarrented catelogue? Do you "flame" Ed McMan for sending you
sweepsteaks entries -

* Start satire*

Dear Ed,

Ed why are you doing this you asshole?! The odds of making money are millions to one! This is a scam! The only ones who make money are the people who started it! (Publishers Clearinghouse). You're wasting my precious time! You're wasting postal services. You're wasting stamps and glue and ink and paper! Paper comes from trees, you're cutting down the rainforest Ed, soon animals will start to die, then comes extinction, before long will be no oxygen and life on Earth will end as we know it! Jesus Ed!!!!!!!!!!!!!!!!!!!!!!!!!!!!

* Stop satire *

Oh and by the way being as this is the scanner group I was wondering if it is possible to recieve the global positioning system SA correction signal using a scanner. If so does anyone know what the freqs are or what range they are in?

Thanks!

I know what you mean. I've got a 200XLT with certain mod's that I've been happy with for years. But I'm looking into an AR8000 very seriously. Great rage, able to be controlled via a computer, PASSWORDS, (but it sounds cool), dot matrix screen, more freq's than I know what to do with, but the price....I'm trying to convince myself that $700 and some change (computer interface, software, etc) is worth it for these 'features'. Hell, I still use an old Realistic Pro-20A for some local stuff.

Anyway, I'm sure if you bought 'this years model' you'd be writing the same message next year, only a few hundred dollars poorer.

john

Except, what is _really_ new?

The AOR8k is at least 1.5 years old.

The BC-9/3ks are about the same age.

The RS-2042 is just a firmware update.

Sure the Icom, and AOR have introduced some new high-end units, but nothing that the 'average' consumer is going to afford.

Hey Uniden, how about a computer controlled BC-9000 class scanner? ;)

This is a follow up to a previous messge I posted askign if Radio Shack scanners sold in Canada had Full 800Mhz..

I appreciate the responses recieved and now realize that I must look for an independant retailer for scanners with full 800Mhz..

During my trip next month I will be traveling to Toronto, and I was wondering if anyone knows of a good place to find scanners and scanning equipment???

Also, if I pick up a scanner or two, is it better to go down to the local UPS and ship it back home.. (Not sure of any border regulations??)

Thanks...

- Jason Lewis

Bad news. That's the worst that could happen as far as scanner monitoring goes. Trunking is just a pain in the neck to monitor, but there's presently no way to monitor digital communications (unless you manage to get your hands on a radio that's part of the system - not very likely).

This reminds me of a television show I saw.

A cop goes up to a door and knocks. A woman answers. He asks, are you
missus so-and-so. Yes, she replies. He informs her that her husband
is dead, killed in a head-on collision with an 18-wheeler tractor/trailer.
She breaks down in sobs. The cop starts laughing hysterically.
Then the punch-line "Mrs. So-and-So, guess what? You're on TOTALLY SADISTIC
HIDDEN CAMERA!"

(well, it was amusing parody of the ridiculousness of of network
television at the time...)

Another bonus south of Richmond on CSX is that the defect detectors also
give train speed, somewhat unusual compared to other Amtrak routes.

4267. Lightning Arrester

Newsgroup: rec.radio.scanner
Date: 1996-09-09 00:00:00 UTC
From: mikenet@access.usa.net
Message-ID: <512eru$337@earth.usa.net>
Source record: 223744

I am looking for a particular type of lightning arrester. I don't know if it is still being made. It has a PL-259 plug on one end and an SO-239 socket on the other. In the middle is a screw to attach a ground wire. Is this type available? Where? How much?

This will be used on the coax from a scanner antenna. No transmitting will be done. If I can find this type I wouldn't have to cut my coax to insert a lightning arrester.

TIA..Mike

RE: (excerpts from a previous posting...)
<<<<As a result, EMS personnel are dispatched to the scene (When I refer to EMS
personnel, this covers police, fire, and paramedics unless otherwise noted).
This call goes out over EVERY scanner in the area to ANYONE with a scanner in their hands. EMS people arrive on the scene and do their thing.

What caught my mom's (and later mine) ears was when some Fire Department personnel said (again according to her accounts of this incident) something
like "There are too many hams listening to us. Switch to Channel 2" (or whatever channel they went to for simplex, on-scene communications).

What's so scary about it, you say??

Think about it. Why would *ANY* EMS person want to switch to another channel because "there are too many hams around"??? After thinking about it, it occured to me that there were either some nosy scanner buffs (who were NOT hams) around who were doing things they weren't supposed to (such as getting in the way),>>>>>

Maybe Lou Shirley was there.

I have had one for 5 months now and use it in the NYC Metro area. As far as performance goes, I love it. It's one of the most functional units I have had. I do wish the audio output were a little stronger and I wish it's size were more like the Pro-43, etc.

I had an AOR AR-8000 for 2 days and sent it back, the BC-3000 is much easier to program.

4271. Scanner Buff Arrested for ARSON

Newsgroup: rec.radio.scanner
Date: 1996-09-09 00:00:00 UTC
From: ronkatz@interlog.com
Message-ID: <323369bc.1781145@news.interlog.com>
Source record: 223851

About a week ago a twenty year old scanner and fire buff in the Toronto area was arrested for at least 3 counts of ARSON. What surprises me is I know this person. In the past this person used to call me often telling me about fires. I even gave this guy film so he could shoot these fires he monitored on his scanner and responded to.

Toronto has a radio system called MetroWide Fire Communications. It is a fire buffs radio system. Fires are discussed and broadcasted to other members for monitoring purposes, canteen truck responses, and some media interest etc. This person was also an active member.

A canteen truck in a local fire department that is used to serve refreshments to fire fighters in multiple alarm calls or where needed, was also manned by this fire/scanner buff.

He was also a Ham.

This person had a very very big interest in the fire department and claimed to be a volunteer. He may infact have been one. He often responded to fires. I'm told by a firefighter that he would drive along country roads looking for family camp fires and burning leafs. He reportedly walked up to these people with a fire depts t-shirt and scanner in hand and caution these people. Later calling he fire department causing them to respond and find him their.

A fire department said they have been bothered by him for some time. He was often at scenes before they where and once even had a different fire department helmet boots and jacket on appearing like a fire fighter, so I'm told. Some of the fire departments involved said he was often at fires before they were.

The thing is, he is a scanner buff, or was! The Courts ordered all his radios,scanners, fire department memorabilia taken away from him and released him supposedly until a future trial.

Weird, He sold the television station I do work for, videos of fires, He had photos in the Newspapers of fires he was at.

I have not heard much more on this. I don't think his case has come to trial yet. I want to reserve any further judgment until this comes to trial, because this guy is really innocent until proven guilty.

The York Regional Police involved are 'cowboys with guns and badges' and it would not surprise me either way. This could be a means of just getting rid of some 'wannna be' or might in fact be a real ARSON suspect. (I'll add my two cents about the YRP cowboys

some other time)

What bothers me is that this case damages the credibility of
those who really are only buffs, interested in monitoring and watching
from a distance and do not interfere with emergency services.

The OptoElectronics Scout Model 40 could do this and costs less that $500.00 and would not take 90 Mins to scan the spectrum. It even has a bargraph strength meter so you could even locate the bug. Maybe not "the best RF bug detector", but it would work to some degree.

: The best RF "bug detector" is a spectrum analyzer that can "sweep" the
: useful RF spectrum in a fraction of a second. But you're looking at a
: $60,000 instrument, too.

: A scanner is, more or less, also a spectrum analyzer, but not nearly
: so sophisticated. The PRO-2004/5/6 scanner series takes about 90-mins
: or so to sweep or search the 25-MHz - 1300 MHz spectrum.

: The answer to your question is a qualified "no", however for narrow
: band bug searches, the answer is a qualified "yes". A scanner would
: certainly be in the bug sniffer's arsenal, but if that's all he has,
: he ain't gonna find very many bugs. If any.

As built:
30-54 Mhz
118-174 Mhz
220-512 Mhz
806-823.9375 Mhz
851-868.9375 Mhz
896-999.9875 Mhz
If your unit is restorable (i.e. does not have an "A" at the end of the FCC ID) and you do the cellular restoration properly you can add 54-88 Mhz and all of the gaps in the 800 Mhz band.

What about all of the emergency calls where scanner buffs did not interfere with emergency personnel or take part in some related illegal activity? Those incidents obviously go unknown and wouldn't be newsworthy to the general public anyway.

I have seen several posts in this newsgroup along these same lines. I think all involved should grow up and realize than scanner buffs are no different from the public at large. There will always be some bad eggs. At least we are no where near as bad as politicians and lawyers (usually one and the same) who are by far more crooked than the public at large. Just witness how many of Clinton's cronies are in jail, under indictment, or under suspicion.

Great! ....glad to help.

Since we have now determined that your PRO-2006
is "off frequency," consider having a qualified service
tech repair it rather than trying to fix it yourself,
without a service manual or the proper test equipment.

It's possible that X301, a 10 MHz crystal in the PLL section,
has aged and drifted too far off frequency. It may require
extra warping or replacement.

Paul,
As regards DES-processed voice, it's probably going to be out of our
league for a while. Perhaps with a good understanding of the operations of
a DES radio and some fast digital signal processing hardware, recordings
could be cracked in FAR worse than realtime. As for the MDT's, if your
local ones are Motorola, Investigate the Motorola Radio Data System
transcievers and RD-LAP radio modems.
You may need a communications analyser to get you a character stream and
parse the packets. Once you have the packets figgered out, then there may
be encryption on top of the packet content data. I have not seen or heard
of scannists reading MDT's yet, only "friend of a friend's uncle" stuff.
Good luck.

If you listen to the cellsite or "tower" frequency, you will occasionally hear a short buzz behind the voice. This is the system commanding the phone to change some parameter of its operation (usually the transmitter power output). Sometimes when you hear the buzz, the signal goes away. this is the call being "handed off" to another cell. The cell you were listening to realised that it was soon going to lose the phone and asked the nearby cells if anyone could hear the phone any better. As soon as one was found, it told the handing-off cell which of its own channels was clear. The handing-off cell then signalled the phone "Change to channel nnn" that's the buzz just before the signal drops.
Then the phone retunes its transmitter & the cell tower transmitter clears the now-idle channel.
The radio reciever in the cell tracker picks out the data burst, the computer reads the channel number & retunes the radio.
There was a company in the Midwest called CCS that used to sell a small board with a microprocessor on it that would decode the control messages. A computer could then derive the cell frequency from the phone channel. Then the radio can be retuned. The signals needed to recieve (snarf) the ESN & MIN come from the phone, not the cell, and the CCS device dosen't decode these.

Not only are you a very stupid newscameraboy, but you're
a blubbering nincompoop. Whatthehellareyoutalking about?

> Tell me Billy, while your spending all this time screwing around and
> being a newsgroup god, who's in bed with your wife? Or has she left
> you! Looks like your relationship with here must be as good as the
> one you have with others here if you spend all this time on the
> computer while she's asleep.

Ahhhhh, way to go Katzenjammer. It took absolutely
nothing to get you outa your closet to show your pimply
butt. You're getting easier and easier all the time.
You should make it difficult for someone to force you
drop your britches and bend you over. You should never do
THAT for free.

Now let's talk about your husband, what say?

> ...go ahead Billy old boy, I'll have a few rounds with you. Give me
> all you got. I'm ready.

You are doing fine, Katzenjammer. I really must admire
your composure under fire. But you need to smear some
RETIN-A on your poopy. All them zits are battling for
possession of your bungee cord and you're going to find
your guts trailing behind you before too long, and the
dogs following, snapping at 'em.

You sure are a goosey little lass, Katzy Baby. The guys
around the shop here are shifting their bets on "most
favored" snotball. You're picking up in the standings.
Poor Mackey and Duff dropped into the basement.

>you are entering freqs and hopping from one menu item to another.
>
>--

I said FAST computer, into which category the 386 does not alas
fall... What I did not say, and I apologize for, is that 100 cps is on
the OS535. I have had no trouble getting in the 60's and 70's on a
486/66 with the OS 456 and a 2006. I have run 100 plus on the OS535,
although my feeling was at those speeds I might be missing a few of
the weaker signals. So I backed it down to about 80.

You might wish to play with the Settling time adjustement and see if
you could get any faster, although on a 386, I'm not sure what to
expect as I have never run Probe on one.

I'm not sure why you are saying it is slow when entering frequencies
etc... I've not had any speed problems there at all, but again, I've
never run it on a 386. It does do OK on my 33MHz laptop though?

Sorry for the confusion.

Ken

You are nuts. Lawyers are not far more crooked than the
public at large. You have been listening to too many
Jay Leno monologues. As for the number of Clinton cronies
in jail, they are far out-numbered by Reagan and Bush
cronies in the big house.

4290. Cell phones - higher priority calls for police and ...

Newsgroup: rec.radio.scanner
Date: 1996-09-09 00:00:00 UTC
From: hh357@aol.com
Message-ID: <510b9g$akd@newsbf02.news.aol.com>
Source record: 223870

I have seen the format of the data burst for initiating cell phone calls. In it, is a 2 bit field labeled priority(or the equivalent). Supposedley, these two bits were designed to give police, military, (and probably the telco), priority use of cells in the event of cell saturation.

In use, a phone with priority would bounce lower priority phones if it came into a busy cell. Conversely, it could not be bumped by someone with a lower priority.

The rumor is that this feature was/is never enabled.

I once asked a police technician the intentionally naive question of.. "...well, don't the police have priority on cell phone calls?"

His answer was (1994) "...we're working on it."

Does anyone have knowledge about the use or plans for this feature? Can this be enabled on a local basis? What type of agencies get priority?

TIA
cheers

This is probably the best kept secret for a mini-scanner. I have had the C-508 for some time, and have done both mods on the unit. The newer versions have cell blocked in the EEPROM, but the image is LOUD AND CLEAR 46.1 Mhz above the cell range. The step size can also be set to 30 kHz.
Both mods involve removing a resistor for each. The full range xmit requires some work under the lithium battery.
The unit looks like a pager. The bonus is that it actually transmits as well!

Tweaking the Master Reference Oscillator (X-301) is NOT for the faint of heart, and yet it can be done with exceptional precision *IF* you have a shortwave receiver that can pick up WWV 10.0 MHz loud and clear.

If you do, and want to give it a shot, I'll be glad to tell you how. You need nothing else but the shortwave receiver with WWV tuned in and a special, but common mini-phillips screwdriver.

Let me know.

>Captain, Scanner Price Police

Well, Cap'n, my point is going to become painfully clear to the rest of the gang one of these days. I really WISH people would take a pause for the Cause and wonder......really wonder.....why there aren't more knowledgeable leaders of the field to participate in this forum.

Where are all the other writers, publishers, engineers, technicians, and long-time advanced-through-the-ranks hobbyists? Why aren't they here?

Sure, there are knowledgeable people who drift in and out. But anyone who is someone in this field comes in and doesn't stay long. In and out. Or never here in the first place.

Why not?

I can tell you why not. I have seen it happen everywhere over the years, from GEnie, CompuServe, and AOL to FidoNet, RimeNet, BixNet, and a hundred Othernets. Even out there live and direct on the amateur and CB bands. As soon as a "personality" shows up, there's a dozen snotballs all lined up and raring to use 'em for target practice. People don't have time for that crap.

That's just one problem of several.

Another is....well, take the likes of this forum's resident Head Cheese Technical *Expurt* in Charge, the good Ronda Katzenjammer. Now you'd THINK a news camera-totin popinjay like the Katzenjammer wouldn't try to be master of TWO disseparate fields....and one in full possession of his faculties wouldn't. But then there's the Katzenjammer kid whose ONLY chance at fame and fortune in Life is to be the Head Cheese in Charge of Technology of a forum like this one.

Trouble is.....he's pissed. He's a wad of head-cheese, all right, but can't manage to tote his own scanner, much less a news camera. But by golly, he's a FULL EQUAL here, and he'll let ya know about it. So will the others who can't accomplish anything on their own. And there's not a dern thing anyone can do about it.

On second thought, yes there is. But it takes time. I'm up for proving it, too. First step is that anyone who wants to play here has got to be able to take the HEAT. I can do that. Next step is to be able to dish it back out. I can do that, too. Now there we have a little program of GIVE and TAKE....a novel ideal, a new concept.

New? Why hell yes, it's new, Cap'n. There's a whole slew of uninolved people "out there" who think everyone else, me included, need to be "victims" and just TAKE the crap dished out by these Katzenjammer Kids and their cousins. But see....that don't fly. It's not equitable. You can't have a decent forum where some folks gets to dish it out and all the rest have to take it. Those who want THAT need a "moderated" forum. :-)

It's got to be GIVE *and* TAKE - totally equitable. It's the ONLY way. That means, if I am expected to TAKE it, then I am also expected to dish it back out. In the long run, he who can TAKE and DISH will prove his point, and that's what I aim to do.

Another problem is that a long time ago, half this silly "netiquette" crap was made up by the jerks and snotballs who were in control, and needed a mindset among the general populace to help them KEEP that control. A snotball just can't survive and hold his own with his master unless he has some "equalizer" rules at his disposal.

One of those "equalizer" rules is just what you expressed above about destruction of this newsgroup. The Katzenjammer Kids NEED that sort of mindset, you see? It keeps 'em breathing..... :-)

In fact, it is neither true nor necessary. It's only a means of keeping people "in line".....just like early religious leaders coined the notion of a single lifetime and an eternity in Hell for those who wouldn't obey and contribute to the coffers. That notion of hell goes a long way to keeping some people "in line". But it's silly.

This newsgroup is no where near close to destruction. In fact, it's farther from it than ever because folks are thinking now. Oh sure, some of 'em think I am the devil personified. That's ok for them to think that. Most know the real score though.....that I'm nobody. Nobody more than anyone else, anyway. And if this nobody can come traipsing in here and give a little; take a little; and be totally immune to the droppings of the Katzenjammer Kids, then hey, anyone can be immune.

Here it is. Once everyone understands that they're in the control console of a game of DOOM with the BFG-9000 ass-kicking gun and passwords for God-mode and total immunity, then....THEN we can get down to some real serious business of scanners and scanning.

I'm trying to explain that once the Mackeys, the Duffs, the Katz's, the Hobarts, and other malcontents come to grips that they're impotent eunuchs, they'll have no choice but to participate or run off and play with each other somewhere else.

And if they don't? Who cares? We're all immune. We're all somebody and we're all nobody. There ain't a thing that matters except scanners and scanning. And there's plenty of that as it is, for those who choose not to read me, Katzy, Mackey, Duff, you, or whomever.

It's cool. In the immortal words of Stewart Brand, "We can't put it together; it IS together." Now if everyone doesn't mind, I'm going to go pee on Katzy Boy and make 'im smell like a man. And then concoct something to post about scanners and scanning and see who doesn't like it.

;-)

-Bill Cheek-

==========

Here are some old and new ways of looking at and understanding FREQUENCY.

1. Frequency equals number of "events" in a given time period.

or: F = n/t

For instance, the year 2000 is a type of century milestone that occurs once every hundred years. The frequency is one per hundred

years,

Miles per hour (d/t) is a frequency.

Revolutions per minute is a frequency.

Some people go to church once a week. Some folks go to the dentist twice a year. Some play scanner eleven times a month.

Get the idea?

2. Radio waves, just like ripples on a pond, are measurable and definable. Waves can be measured in two ways, one being the distance from the peak of one wave to the peak of the next, OR from the trough of one to the trough of the next. This measurement is called 'wavelength' and is expressed in some unit of lineal distance: inches, feet, yards, miles, meters, etc.

The other way of measuring waves is FREQUENCY. But instead of "events" per time, we consider a whole "cycle", from peak to peak, trough to trough, or some other fixed point on a wave to the same point on the next wave. One complete wave is called a cycle.

Thus, radio frequency is measured in "cycles" per time. And the
standard time interval is one second, hence: cycles per second.

About 20-25 years ago, the "cycles per second" was equated to
the Hertz. Therefore:

One Hertz equals one cycle per second or: 1 Hz = 1 cps

kilo (k) = 1000
mega (M) = 1,000,000
giga (G) = 1,000,000,000
tera (T) = 1,000,000,000,000

Therefore: 1 kHz = 1000 cps (or Hz)
1 MHz = 1,000,000 cps (or Hz)
1 GHz = 1,000,000,000 cps (or Hz)
1 THz = 1,000,000,000,000 cps (or Hz)

154.970 MHz = 154,970,000 Hz (or cps)

3. Radio Frequency Spectrum Definitions

0 Hz - 30 Hz --- (Undefined)
30 Hz - 300 Hz ELF (Extremely Low Frequency)
300 Hz - 3 kHz VF (Voice Frequency)
3 kHz - 30 kHz VLF (Very Low Frequency)
30 kHz - 300 kHz LF (Low Frequency)
300 kHz - 3 MHz MF (Medium Frequency)
3 MHz - 30 MHz HF (High Frequency)
30 MHz - 300 MHz VHF (Very High Frequency)
300 MHz - 3 GHz UHF (Ultra High Frequency)
3 GHz - 30 GHz SHF (Super-high Frequency)
30 GHz - 300 GHz EHF (Extremely High Frequency)
300 GHz - 3 THz --- (Undefined)
3 THz - up --- (Undefined)

4. Concepts of Frequency

A. Rotation of the earth on its axis:
The "day" is one cycle per 24-hrs, or
1 cycle per 1440 minutes,or
1 cycle per 86,400 seconds, or
.000011574 Hz

B. Revolution of the earth around the sun:
The "year" is one cycle per 12 mos, or
1 cycle per 365.2422 days, or
1 cycle per 31,556,926 seconds, or
0.000000031688764615412 8 Hz

CONCLUSION: 1 Hz is nowhere close to "as low as it gets".
In fact, 1 Hz is a rather high frequency
considering that the resonant frequency of the
Universe is not higher than:

0.00000000000000000003961095576927 Hz and probably less!

C. The frequency of light is around 666 THz

D. The term, "DC to Daylight" loosely means 1 Hz - 666 THz.

5. Wavelength and Frequency

Wavelength (L) = Speed of light (C) / Frequency (F)
L = C / F

L (lineal units) = C (lineal units per sec) / F (Hz)

L (meters) = 300,000,000 (m/s) / F (Hz)
L (feet) = 984,251,968 (f/s) / F (Hz)

A. The wavelength of 300 MHz is 1 meter.
B. The wavelength of 30 MHz is 10 meters.
C. The wavelength of 3 MHz is 100 meters.
D. The wavelength of 3 GHz is 0.1 meter

6. Conversions

A. 25.4 mm per inch
B. 2.54 cm per inch
C. 304.8 mm per foot
D. .3048 m per foot
D. 3.2808 ft per meter

4299. how to scan pager data?

Newsgroup: rec.radio.scanner
Date: 1996-09-09 00:00:00 UTC
From: awmunn@vela.acs.oakland.edu
Message-ID: <510h5j$ecs@news2.acs.oakland.edu>
Source record: 223879

I'm interested in scanning, decoding and logging all the data sent to pagers in the Detroit area. Can someone recommend the optimum hardware/software set up to accomplish this? Do I need one radio per pager I wish to monitor? or can I use a single radio to scan them all? Does each pager use a seperate freq? Or do they use the same frequency while watching for a unique ID to precede the page? Thanks for any info..

Andrew

4300. Any hardware mod's for MR-8100??

WW>From: wood@nexus.aer.loral.com (William Wood)
WW>Subject: Antenna in the attic?

WW>I'm just starting to get into scanning and am looking to get a
WW>better antenna for use with my PRO-60 while I'm at home. I live
WW>in a community that doesn't allow any type of antenna to be visible.
WW>I'm, therefore, forced to either put it in the attic, or try to
WW>disguise it as a piece of landscape or patio furniture.

If you put it in an attic area, try to check the roof under the shingles or rock. If there is a metal flashing strip on the peaks (roughly a foot wide following practice here in Greater L.A. area), it will do some pattern distortion to any antenna sitting under it. You can use any antenna that fits the attic area, but there's no answer on how it will affect the antenna pattern. The roof wood and beams are a dielectric material that distort the pattern. When I first moved into my house in SFV I tried a simple FM turnstile up in my attic area, had poor results even with moving it around. Finally put it outside on a mast.

There's an amateur radio 2 Meter antenna (144 to 148 MHz band) advertised in the ham magazines that is enclosed in a PVC pipe, made for mounting on a vent pipe somewhere on the roof. It's one way to get a vertical antenna on the outside without looking like an antenna.

I've heard of a vertical antenna supposedly mounted on top of a small flagpole but don't have any details. I was thinking that would fit in with a very patriotic Orange County. :)

WW>I've been thinking of getting the RS discone antenna and putting it
WW>in the attic. Would that bring in more signals? I live is a shallow
WW>canyon in the foothills, so I can't get a good line-of-site to LA.
WW>Would a directional antenna be better since pretty much all signals
WW>will be coming from the west (to the east is nat'l forest and mountains).

Bad news. Living IN a shallow canyon without line-of-sight is a not-good situation. A directional antenna MIGHT help, might not. In Korea we had a lot of 70-90 MHz AN/TRC-1 and -4 FM units with 3-element yagis and the antenna mast mounting allowing azimuth rotation. Some locations had best signal orientation in weird azimuths due to the hills and some locations were unsuitable for any VHF links. If you have the vertical space in your attic, you could try a TV Log-Periodic antenna tilted 90 degrees on the side. The bandwidth is there and a log-periodic is directional with forward gain.

There is also a mod for the "restorable" PRO-43's that enable it to receive shortwave (from approx. 6 Mhz to 30 Mhz). I performed it on mine and with the scanner plugged into my various HF antennas, I was able to receive US and DX shortwave stations.

I don't have the mod with me at this time (at work) but it is floating around somewhere on the Internet.

Here is a way to quickly, easily generate large streams of cash in relatively little time with very little investment. It's worked for others and unlike most get-rich-quick schemes, it will work for you. Does a $7,000 return on a $7 investment sound like a worthwhile opportunity? $17,000? $27,000? If you could use that type of money, and you can spare seven bucks - five $1 bills, envelopes and postage - read on. I know you're skeptical, and so was I at first, but I ask you to please read on and get all the facts before you write off this incredible, legal business opportunity. Someone else wrote the instructions below, but they did such a good job I figured "why mess around with them?" They might seem long-winded, but please bear with them - you *will* thank yourself later... if you're paying an hourly connection fee, it probably doesn't matter since you'll soon be swimming in cash anyway. But if it's really a concern, download this article to your computer or print it out and read it offline. You will NOT be sorry! Here are the instructions:

****
*

!!!HONESTY IS WHAT MAKES THIS PLAN WORK!!!

****
*
I wrote a small note to send with the dollar saying "please add my name to your list." I then took the first name on the list off and moved the
rest of the names up one slot. Then I added my name in the number 5 slot of the list (The placing your name on the list is where you make money). I then took the new list of names, which now included my own, and E-Mailed it to every BBS operator in Fidonet, which is a group of BBS operators across the world. I figured that was a good way to get it to a lot of people fast. I then sat and waited for the money to come in. I was expecting to maybe make, at the most $500 to $600 dollars, or at least somewhere in that area.

The secret from my wife was out after about 2 to 3 weeks. It became very hard to keep the secret any longer from her, because of the return addresses. She was wanting to know who, what and why there people from all over the world where sending me a dollar bill. I then explained it to her and she could not believe it. The mail continued to come in every day. My mail carrier even questioned me once or twice. it was a feeling beyond belief. I guess that you want to know how much I made now? Well, I did not reach $35,000, but I did bring

in $14,684. I just could not believe that it worked this well.

The first thing I did was pay off mine and my wife's car. It felt so good calling the bank and asking for a payoff. I then took the rest of the money and paid off as many of my credit cards as I could. Now after 1 year, I am ready to do it again. This time my spouse suggested USEGROUPS on the Internet, and I believe that it should work better than before. I think that someone could hit that $35,000 mark, but I do not know that yet. It all really depends on you, the individual. You have to follow through and re-post this message everywhere you can put it. the more people you get it to the better the response you will get. It is just too easy to pass up this money making system!

I will say this much about this system, it works! I got hold of this list after it had already been all over my home town. I have talked with everyone of the below list, and they said that they started out thinking that it would not work. Most of them made more than I did on the first go around. I am not yet really sure who started this thing or really where, but THANKS!"

!!A LOOK AT THE REASONS YOU NEED TO DO THIS!!

Let's look at the reasons you need to do this. First of all it only costs less than $7 - 5 $1 bills, 5 $0.32 stamps, and 5 envelopes that you need to mail to the 5 names on the list. Then simply re-post the message and list, with your name on it, to all the USEGROUPS and public BBS's you can. Then just sit back, relax, and enjoy receiving mail in your mailbox - mail with dollar bills in every envelope! Everybody has $5 dollars to put in something that will make them $10,000 to $15,000 dollars in about 3-6 weeks. Ask yourself this simple question, "Where can I get $5?" Take lunch to work one day, drink water instead of pop or tea five times, hold off on those lottery tickets, and put $5 dollars in this MONEY MAKING SYSTEM NOW! It is really hard to lose.

Follow these instructions step-by-step if you are ready to make some money. You might want to make a printout of these steps to make them easier to follow.

1. On a blank piece of paper write the following message:

"Please add my name to your list".
** YOUR NAME AND ADDRESS **

You will be paying for a legitimate service and making this money system completely legal. You will not be just sending a dollar to someone, but paying for the legitimate service of adding your name to their list. Make sure to also write down your name and address on this piece of paper. I assure you once again that this is completely legal!

2. Fold your piece of paper around the dollar bill, (NO CHECKS OR MONEY ORDERS), and put both in the envelope. Address an envelope to all 5 of the people on the list. You will find that list at the end of this message.

3. Now, here is where you make your money. Look at your list of 5 people. Remove the name in slot number 1, and move all the other names up 1 slot. For instance, move the name in slot number 2 up to slot number 1. The name in slot number 3 then moves up to slot number 2. The name in slot number 4 should then be moved up to slot number 3, then finally the name in slot number 5 up to slot number 4. Then put you name and complete mailing address in slot number 5.

4. Now, upload this updated file, with your name in slot number 5, to as many USEGROUPS and BBS conference areas and file areas as you can. Remember the more people that get the message to the better the response will be for you, and the other people on the list. Give the message a real eye catching name so it will catch someone's eye. Some examples are: "Need some extra money?", "Need some money quick?", "A way to pay off your bills fast!!!", or "Money!". Set a goal on how much money you want to make and keep these numbers in mind at all times. With this goal in mind, you will get a good figure of how many people must read the message and then respond. You can make it easier for people to receive your message in USEGROUPS by UUE encoding the file when you are uploading it. That way people can download it to their hard drive or a floppy. Don't alter the file type, leave it as a MS-DOS Text file. The best way to test the file is to open the file using Notepad in windows to make sure the margins look right. You should make sure that the viewing person does not have to slide the screens back and forth to read the message. One other thing about the list of names, you should not try any funny editing of the list of names.
You should add only your name and no others to the list. If you want a friend to do it with you give them a copy of your edited list, with your name on it, so you can make a dollar for yourself.

5. If you need help uploading your file, ask someone on the system you are trying to upload to. Somebody will always help you with the matter. When you upload it as a file on a BBS by sure to give the file an eye catching name like: "CASH.TXT", or "MONEY.TXT".

6. After you do all the above steps sit back and wait for the money to come in. Expect to see some money start in about 2 weeks. When week 3-4 rolls around, the money will really start coming. It is more than just a normal feeling to see all the money that you will receive.

7. Now you pay off all your debts, and then go and buy something that you have always wanted or maybe something that you have always wanted to get someone else. After that, just enjoy life!

8. When you have spent all of that money, simply start posting the same message again. Post it in the old places, and maybe some new

places. Don't just delete this file after the first time, because you
can reuse it time and time again in the same
way you did the first time.

The list of names are below.

****

THE NAME AND ADDRESS LIST

****

HONESTY IS WHAT MAKES THIS PROGRAM WORK

Slot 1: Matthew Brodeur

Uh, yeah, if they don't happen, I guess you're right, they "obviously
go unknown..." Hard to argue with that logic! ;)

> I have seen several posts in this newsgroup along these same lines. I
> think all involved should grow up and realize than scanner buffs are no
> different from the public at large.

There are a lot of SCARY looking individuals who are into the radio
hobby! Going to the Dayton Hamvention or Monitoring Times Convention
can be like going to the zoo, in terms of sights, sounds (&
unfortunately, smells) -- so yes, IMHO there is a noticeable distinction
between a random set of people plucked out of general society, and a
random set pulled out of some RF monitoring hobby group!

But the relevent difference in the basic 'ambulance-chasing' scenario
is that while the general public might be just as likely to get in the
way of the public-safety crews as the 'scanner buffs,' the scanner buffs
are the ones who at times will specifically head to an emergency-run due
to learning about it from monitoring, whereas the general public is
going to already be in the area on other business, or hear about it
after the fact via normal media outlets.

> There will always be some bad eggs.
> At least we are no where near as bad as politicians and lawyers (usually

>>I don't need to go into great lengths to tell you how/where/when I bought
>>this scanner, but I can tell you I am LOSING dollars.

That is of no concern to me, and has absolutely nothing to do with today's market value of the scanner.

Let's try this...how would you like to buy my computer? It's one of the first 100Mhz Pentiums ever produced. State-of-the-art in February, 1995, with 16 megs of RAM, 1.275gig hard drive, 14.4 fax/modem, and a QUAD-Speed CD-ROM. I paid $2799.95 for the computer alone.

I'll sell it to you for "what I paid", "my cost!" That's right...I'm not making any money on the deal. In fact, I'll give it to you for an even $2800 and you even save the sales tax!

Such a deal!

4320. PLEASE opinion - VHF/UHF scanner

Newsgroup: rec.radio.scanner
Date: 1996-09-10 00:00:00 UTC
From: "Miro Ivankovic, SKS[Maribor" <Miro.Ivankovic@guest.arnes.si>
Message-ID: <01I9BQUE3CDU000FKT@arnes.si>
Source record: 223550

Hello,

I am looking for the 'best choice' of the VHF/UHF (incl. Air)
handheld scanners. Could someone give me any advice on this.

However, I don't care about HF (SSB...) but I want a good perfor-
mance nearby 100-500 MHz (AM/NFM) and above.

Generally, all requirements are: good VHF/UHF and AirBand, high
level audio output and maybe standard batt. size - 'AA'

Thanks, in advance, for the help and any information.

Miro Ivankovic

E-Mail (RFC-822): miro.ivankovic@guest.arnes.si

Nathan,
First disregard the reply by Brian.
You can purchase the 8K case from EEB 703-938-3350 $24.95 .
This is less than I paid for mine from the dealer I purchased
my 8k from. Also if you have a older 8k and are having a
problem with the knobs slipping EDCO 703-938-8105 has replacements
that are made of a better material.They are $2.50 .
I have also seen somewhere there is a company overseas that makes
a "real" leather case but, I have no info on this.

4323. bc3000xlt problem?

Newsgroup: rec.radio.scanner
Date: 1996-09-10 00:00:00 UTC
From: Roy@Hylndr.enet.dec.com
Message-ID: <514b6i$ojc@mrnews.mro.dec.com>
Source record: 223553

An interesting discovery I've found regarding the BC3000xlt - Anyone have any comments?

Here goes:

Nashua police has two freq. 460.1 and 460.2, both were in BANK 2.
2. When scanning, 460.200 would not become active when they broadcasted.

There would be occasions when it would, then fail ..very flakey.

3. If I put 460.2 in bank 21 (the 1st priority channel for Bank 2), It would catch action on 460.2 when I had priority on. Not when it was off.

4. I removed all frequencies in bank 2 , except 460.2. I'd scan bank 2 and others, it worked fine. I could here action on 460.2 no matter what channel in bank 2 it was in.

5. I then started adding in the other frequencies one at a time. Confirming that I could hear action on 460.2 when scanning.

6. While continuing to add my freq's into bank 2, and confirming all was well, I then entered a freq. of 460.1. When I did this, I then proceeded to scan to insure I could receive action on 460.2. NOTHING happened! I verified they were broadcasting on 460.2 with another radio, and it was not picking it up at all.

7. I then removed 460.1 from bank 2, proceeded to scan and I once again could receive action on 460.2!!

8. If I tried 460.105 instead of 460.1 , then scanned. I continue to be able to pick up action on 460.2.

To summarize, it seems that when the radio is sorting freqs in each bank, it has some type of trouble distiguishing 460.1 from 460.2 and just blows it off? Likewise, if I left 460.1 but changed 460.2 to 460.205 then everything works great!

Now the big question is what's the deal? Do I have a messed up radio or is this an inherant problem with the bc3000 and I just happen to stumble onto this because of the freq. Im listining to??

Any comments on this? Please mail >> roy@hylndr.enet.dec.com

Hello,
Her is what I have or Ontario/Toronto Hydro, These are not
confirmed just what I have in a listing here. Try them now so next
time a storm comes you'll be ready, thats what I did with the local
power co. here.
Here ya go:
Ontario Hydro in Toronto:
140.43
418.1625
49.27
49.35
49.43
Toronto Hydro:
413.6375
413.6875
153.71 (F1)
154.845 (F2)

Hope that helps.

Roy,

Interesting. I originally theorized that my priority scan problem I described as a response to your other post (see "BC3000 -Assistance Needed") may have been related to how frequencies are stored and sorted within each bank since my problem happened but only when certain frequencies were programmed in. Perhaps the 3000 has some sort of "off by one" problem when sorting and it misses one or more frequencies under some circumstances depending on what frequencies are used.

If one channel was not being looked at during a scan, most of us would never know especially if there is lots of activity on other channels to keep up occupied.

Also, I wonder if the firmware is trying some slick method for detecting activity on the channel. Perhaps since it didn't see activity on 460.1 using some "wide filter" then it figured it would not need to check 460.2 since it would have heard some "bleed" on the 460.1. Perhaps they need to do tricks like this to achieve the fast scan speeds. I really don't know enough about the inner workings of these scanners, but I bet some others reading this feed would know. Any help here?

Also, ever notice how if you scan up in a car radio using the SEEK button, it may stop on a frequency, but press SEEK in the opposite direction and it sometimes skips right by the very same active channel. Perhaps there is a similar problem where it is more or less

sensitive scanning in one direction after sorting frequencies. There is a keypad trick that I don't have in front of me which would change the sort direction and you could try to see if that makes a difference (of course you could just shift the problem to somewhere else).

Again, I haven't confirmed your problem. It may be as simple as having 460.1 and 460.2 in the same bank... unfortunately I don't think those are active frequencies in my area... but I'll try it when I get a chance.

The reason it may work when Priority scan is that frequency in question may be checked independently from the normal scan and this "out-of-order" scan might be enough to cause the detection to work properly (since it may not be doing adjacent scanning anymore - it's now hopping around) or that it now gets a second chance to "see" the frequency which has been eliminated from the search algorithm due to a potential sorting problem. Again, I don't know enough about the inner workings except to take a guess here.

Unfortunately, there is a near infinite number of frequencies and combinations for entering them into the scanner. Eventually someone could enter a range of frequencies which would potentially cause grief for the algorithms programmed into the firmware. A saying I once heard in my line of business (software engineer) is that any program over 10 lines of code has some bug lurking within it.

And... of course... it could be an individual unit problem.

As requested, I've emailed you as well as posted a follow-up message. It's a shame you didn't continue under the original thread so people could better follow the happenings... I think this, like the priority scan problem, is something 3000 owners would like to follow. It may turn out to be the same problem.

Also, ever notice that I begin a great many of my paragraphs with a vowel?

The book "Monitor America" 3rd edition 1996 includes police 10 codes and
also crime codes [i.e. 415, 211, etc.] for major metro areas. There are
local variations to the 10 codes, so what applies in Virginia, may or may
not apply in Texas, or any other state. It is a wealth of information
and was definately worth the price IMO.

It sounds like you are describing "access overload class". This is a
setting in the phone. Although it is there, the last I heard, there are
no cellular carriers using the data. So no matter what you set it for,
the priority of your call will not change on most systems.

I don't see how it would sork since there seems to be no "standard" for
setting this AOC in the phone. We used to set them to the last two
digits of the phone number.

And I am ure there are cops out there that have been led to believe that
they get special priority when they place a call. Unless there is
another method in place, I think they have been "fed a line".

4348. Can't hear CHP mobile units! Help!

Newsgroup: rec.radio.scanner
Date: 1996-09-10 00:00:00 UTC
From: Greg B <gbod@uclink4.berkeley.edu>
Message-ID: <32361225.1E9E@uclink4.berkeley.edu>
Source record: 223578

I've started monitoring the California Highway Patrol (42-43 Mhz), but I'm having trouble hearing any mobile units.

I can pick up several dispatch offices from my east SF bay apartment, and I live within an earshot of three major freeways, but I have never
heard any kind of response from any mobile units. I was under the impression that they were using repeaters, but I can't hear anyone but the
dispatch office! Are they operating simplex? Are the mobiles offset a few Khz or Mhz?

I've scanned all the CHP channels trying to hear a response, but I've been unsuccesful.

Can anyone help?

Thanks!!!!

Bearcat BC-9000XLT New Scanner!
25Mhz -1300 Mhz AM, FM, FM wide

This is a new in the box scanner.
Purchased mail order a Two weeks ago for $389 Plus shipping.
Will sell for $369 Plus shipping.
The Price is Firm.

Reason for selling. I purchased a new Surround Sound
Receiver and find myself listening to the stereo more than the scanner.

Receives cellular in the 376 Mhz range great!
(image)

All manuals, box,and power adapter.

Like I said this radio is New! Not a scratch!

Source record: 223582

I have seen a file on modifying the realistic (radio shack) PRO2021
scanner to recieve (approx) 800-900 MHZ.
The modification describes clipping a diode to enable the cpu to
access this band but the tuner does not recieve anything as the
modification is incomplete.
On a web site it is claimed that the full modification is not
possible, but another web site claimes that it is.
Can anybody confirm if an 800 MHz modification is possible with this
reciever and if possible how to carry it out.

Thanks in advance:-

From: Tracy Justus <service@pacbell.net>
Message-ID: <3236601E.60D9@pacbell.net>
Source record: 223590

What I do is monitor both the mobile and repeater
side of the channel and take off the delay. For
example, CHP in my area use the purple channel
42.400, not only do I listen to 42.400, but I also
listen to 42.160 (mobile). You have to be fairly
close to the mobile unit to pick them up so to
improve your reception make sure your using an
outside antenna.

I also like to monitor the air craft channel (45.020 I think)

The same thing happened to my BC-200XLT last year, but in my case, it happened because I did something stupid. I attached a test lead in the wrong place and kaboom!

The symptoms were the same, would seem to scan, but would not break squelch no matter if you even turned the squelch all the way off.

Anyway, I sent it off to be repaired at Grove and they replaced a switching transistor and now it works fine again.

Cross-posted to: alt.radio.scanner,rec.radio.scanner

Hi, everyone:

My pro-43 died about 2 wks ago, I replaced 2 MA862 (Surface mounted Silicon diode, marked D101, D110) with 4 IN4148 (Fasting switching silicon, because I can't locate any other SMT replacements) with the help from the service manual. I checked the rest of diodes and transistors and found no defective parts so far. Now I can't pick up anything on 800Mhz or 50MHz.. and the receiption on VHF is very poor...

I am suspecting maybe it's faulty on RF front-end (Q104, Q105), but both checked out ok with diode tests.

Does anyone have any experience repairing Pro-43?

Any tips or comments are appreciated.

thanks.

Sufon.

....and now in simple English, yes, the whip will give better reception in
the lower frequency bands. Unfortunately, I have had poor luck with the
construction of more than one Radio Shack discone antenna. I chose the
Diamond D-130 discone as replacements. It is strong as nails, has
withstood near hurricane force winds and icestorms and already has the
verticle whip as part of the assembly. The discone may not be the end
all of antennas, but they have served my applications splendidly.

Cordless phone frequencys are 30.075 to 30.300Mhz in 25Khz steps.

Also baby monitors on 37.6, 36.7, 30.4 and 30.6 Mhz.

Fast food drive thoughs use 40.41 and 40.49 Mhz.

Poor argument. If 20% of the public are 'ambulance-chasers,' and 10%
of the public has scanners, odds are that the number of non-scanner
equipped 'ambulance-chaser' idiots will certainly be larger than the #
of scanner-equipped 'ambulance-chaser' idiots at the scene!

That can be figured out by using a little common-sense, but you're
welcome to take a survey at a scene to reach my conclusion, Jeff.

> Maybe you are content to accept the fact that a few bad eggs are

That's nice. I'm glad you used "maybe," though, since my prior post
never indicated or addressed that one way or the other!

> As for the irrelevant stuff, I guess I can overlook O.J. and Saddam.

I was negating a relevant comment of yours by making a relevant
analogy, which you unfortunately didn't comprehend.

TY>From: tyler@cyberia.com (tyler)
TY>Subject: Improve RS DISCONE with a wire? HELP!

TY>I've heard it's possible to improve a Rat Shack Discone antenna with a wire
TY>the top of it. I've seen other discones in this configuration. What would b
TY>design considerations in the length of the rod at the top? Would it
TY>effectively be a 1/4 wave whip? Any help would be greatly appreciated! Thank
TY>in advance. tyler

The original "wideband discone" came out over 15 years ago with the
bottom end of the frequency range at about 25 MHz. The monopole on top
of the disc portion is essentially a base-loaded shorter-than-quarter-
wave whip lifted directly from the shorty CB antennas available 35 years
ago. At higher frequencies, the base loading inductance acts similar to
an RF choke in a circuit. There is a slight distortion to the elevation
pattern by having an isolated conductor above the disc (the whip as it
appears to frequencies above 100 MHz or so), but that distortion won't
affect zero-elevation-angle reception more than a db plus/minus. The
base-loaded shorty whip extends the lowest frequency to cover Citizen's
Band service frequencies and does a fair job on amateur 10 Meter band.

Last week on Fire-L or Scan-L lists, someone posted an article giving
the frequencies for the Erickson Helicopters being used in Oregon??
I would be appreciative if anybody would repost them on this newsgroup
I deleted the list by accident. We have one of these Erickson
Helicopters based at the Van Nuys Airport in California. This
helicopter is being used to fight the brush fires in mountainous
areas. I am wondering if these same frequencies would work down here.

Thanx in advance, and good scanning makes good friends.

A friend of mine makes his living chasing news (newspaper photographer) and he's mentioned that its difficult to get to a fire/accident scene before the fire department because they are dispatched from the closest fire station and run code-3 to most calls (injury or fire).

I've noticed that police in my area sometimes get the call before fire does, but this is mostly in cases of injured persons and the police don't go code-3 unless it's an immediate life threatening call like someone who's not breathing.

Hell, I was monitoring my scanner when a report of an auto accident happened just a block away from my house (10 houses or so) and I started walking there right as I heard the call and when I got there fire was just setting up! (Station was about 1 mile away).

>
I question the "going fully digital now"....san Fran cisco is
installing their 33million dollar "digital-ready" system and
will be running in less than two years....but it's trunked 800
Motorolla system as I've been told and it will be "digital ready"
to make the switch when costs come down...they are very high now.

I don't see how a local agency can afford the digital at this
juncture of the technology....Alameda County is on Motorolla
trunked and am told they are "digital ready".....

Sacramento went over to Motorolla just this month....Richmond
is ready to go, but lacks money. Livermore and Pleasanton are
on 800...but only use 6 channels plus the mutual aid add-ins.

Oakland is on the GE system. San Diego County is going trunked
and Motorolla got that tone too...digital ready.

Seattle has gone over to Motorolla this month...800 trunked.
They efven have a WWW site with the new channels for view.
But get this, they broadcast on their old UH freq 453.80.

Tacoma is next....Portland too....

Seems Motorolla is making inroads into the minds and hearts of
agencies with their "digital ready" systems.

Here is the thought: just when it gets known how to get access
to trunked 800 economically by the Press....then they will change

over to digital radio....then no one gets to listen on scanners.

A zillion things can be done to most any scanner, but no one has written anything specifically for the MR-8100 of which I am aware.

Design deficiencies usually cannot be field corrected. Features can be added, dozens of them, depending on your abilities, interests, and needs. You need to narrow down into specifics, and maybe something will come to light.

Rgds,

Bill

I guess your only other option is to do a little social engineering
and ask a police officer what the frequency is. It sometimes even
works. Your best bet is to ask one of the police officers that
handle parking enforcment or traffic control. They spend all day
alone with no one to talk to and will start talking up a storm if
you show interest in their job. I've once even had one of these
police officers hand his HT to me so I could check it out (Though
he did watch very carefully that I didn't hit any buttons) :)

Same thing goes for other frequencys your looking for .. utility
companys are a great example. People treat them like they are just
a peice of equipment there just to fix their immediate problem. If
you show a little interest in their job they will tell you ANYTHING!

4376. PRO-2004/5/6 Precision Adjustment

Newsgroup: rec.radio.scanner
Date: 1996-09-10 00:00:00 UTC
From: bcheek@cts.com
Message-ID: <32351ebc.107086821@192.188.72.23>
Source record: 223606
Cross-posted to: rec.radio.scanner,alt.radio.scanner

NOTE TO ALL: This procedure is for the PRO-2004/5/6
scanners and how to precisely adjust the Master Reference
Oscillator to a precision tolerance. You need only a
Shortwave Receiver that tunes 10 MHz (WWV); a fairly
clear WWV signal; a piece of insulated wire; and a #3
jewelers screwdriver from Radio Shack's set. NOTE: Do
this procedure at your own risk - I will not be responsible
for yours or my errors, or your inability to follow these
instructions.

(c) 1996 Bill Cheek <All rights reserved>

> Ah, Bill, I knew you'd come through again <g>. I have a pretty good
> shortwave (Sony SW-77), and I have some small, jeweler's type
> screwdrivers.

Make SURE you can get WWV 10 MHz in loud and clear.
You need a flat-blade jewelers screwdriver of the
#3 size in the Radio Shack set. Originally, I told
you a phillips head, but I was mistaken. Radio Shack's
#3 flat blade jewelers screwdriver is just right.

> The question is: how bad can I screw it up?

You could physically damage the sucker in which case you'd
be shit outa luck.

> And if I do, do you know of a place other than Radio Shack that
> can do a professional repair?

I can. Contact me privately for more information. Better still,
take your time and follow these instructions carefully.

> If you're willing to tell me how, I can look at the instructions and
> see if it is something worth attempting.

The preliminary steps are relatively risk-free. And may
serve to bolster your confidence or to shatter it altogether.

PRELIMINARY

Instructions below are for the PRO-2005/6. The PRO-2004 is
similar, but part numbering and locations are different.
Make note now:

PRO-2004: IC-301, Pin 14 and X-301 are located inside the
PLL compartment with the smallest cover on PC-2.

PRO-2005/6 Instructions

1. Pop the cover off the PLL compartment that's closest
to the front of the radio. Locate X-301, a silver-ish
rectangular box with a hole in the top, covered by a
small square of cellophane tape. You'll be adjusting
the small trimmer straight down in that hole. Use a
strong light to check it out so you can see what you're
up against. Don't DO anything yet; just follow instructions.

2. Identify IC-302, a 16-pin MC145158 IC to the rear and off to
one side of X-301. Identify Pin 14. (This is IC-301 in the
PRO-2004)

3. Tune your Shortwave receiver to WWV 10 MHz and make sure
you have a decent signal. (It varies with time of day,
so if the signal is weak or non-existent, wait for a
better time.

4. Cut a 3" - 6" piece of stiff, insulated wire (22-ga).
Strip 1/16" of insulation from one end.

5. With WWV coming in on the nearby receiver, and the scanner
turned ON, touch the wire prepared in Step 4 to IC-302,
Pin 14. That's all, just touch and hold this wire to Pin 14.

At this time, a portion of the X-301 Reference 10 MHz signal
should radiate from the wire you're holding and be picked up
by the shortwave receiver along with WWV. You should hear the
two signals mixing, but the effects of this will vary, depending
on how far off your X-301 oscillator is from WWV's standard
10 MHz, and how strong the two signals are. If your signal is
too strong and tends to overpower WWV, then cut an inch or two off
the wire and try again. This will reduce the strength of X-301's
signal. If the two signals are relatively matched in strength,
and exactly matched in frequency, then there will be very little
difference noted in the SW receiver. If the WWV signal is a lot
stronger than your test signal, then use a longer wire.

If the two signals are not matched in frequency, then you will hear
a form of interference called a "heterodyne", and the greater the
error between the two signals, the higher the pitch of the heterodyne.

For instance, WWV is GUARANTEED to be 10.000000 MHz. It is a
reference standard. Now suppose your X-301 is 10.000500 MHz.
The difference between the two is 500 Hz, and you will hear a
500 Hz tone. If your X-301 were at 10.000010 MHz, the difference
would be 10 Hz, which you could not "hear" but you would hear a
"whoosh-whoosh" at a rate of 10 "whooshes" per second.

The idea here, then, is to adjust X-301 so that the tone decreases,
and/or the "whoosh-whoosh" rate diminishes until the two signals are
matched. This process is called "zero-beating", and is MUCH more
accurate and precise than with anything short of a laboratory grade

frequency counter. You can actually set X-301 to within 1 Hz of
the WWV standard, simply because you can count the "whoosh-whoosh"
rate when it falls to 2 or 3 times a second. Fine adjustment of
X-301 at this point can take X-301 to less than 1 Hz difference
from WWV.

NOTE: Hobby grade frequency counters are not accurate enough to make
this adjustment! Don't try it!

The PRO-2004/5/6 specs call for a +/-5 Hz error, max. You can easily
beat that with my SW receiver method.

Now the CAVEAT here.....is to MAKE SURE the screwdriver EXACTLY
fits the X-301 adjustment. It the fit is not good, you risk
damaging the adjustment head, and then you're S.O.L. The adjustment
head of X-301 is filled with a soft-ish substance, so you have
to insert the screwdriver and gently press down a little. Then
a gentle twist in either direction will make the adjustment.

Up to this point, you should have done nothing but listen to
signals and see if you can recognize what I am talking about.
If you can, then proceed. If not, get back to me with a description
of what you encountered.

MAKING THE ADJUSTMENT
=====================

The next step is to make a tiny adjustment one way or the other
and LISTEN to the difference of sound in the SW receiver. If
the tone goes up or if the "whoosh-whoosh" rate increases, you went
the wrong way with the adjustment. So go the other way. When
you're going in the right direction, the tone or "whoosh-whoosh"
will decrease steadily as you adjust a fraction of a millimeter at
a time. As the tone gets down to 30 Hz or less, the sound of it
will disappear and the "whoosh-whoosh" will become apparent.

The idea is to MATCH the two signals. So much the better if the
SW receiver has an S-Meter where you can WATCH the zero beat
process in addition to listening to it. After a couple of tweaks,
you should pretty well have a feel for what I'm talking about.

Once set, X-301 should not need readjustment for a year or more.
It is a "temperature compensated crystal oscillator" and is very
stable and accurate. When you are satisfied with the adjustment,
replace that square of cellophane tape and restore the unit to
operating status.

That's all there is to it.

SUMMARY
=======

In summary, the risk factors are mostly mechanical.

A. Do NOT force X-301's adjustment. The right screwdriver will
adjust it nicely, but the wrong one will break it.

B. The sample signal from IC-302, Pin 14 should not be much weaker,
nor much stronger than the WWV signal, so adjust the length
of the wire to achieve this relative match.

C. Provided that (A) and (B) are not problems, then the worst you
can do is throw X-301 way off frequency. But if you can do that,
then you can get it back ON frequency. Rotating X-301 all the
way around in a circle will help give you a feel for the wrong
way to adjust and the right way to adjust. It is intuitive,
once you get the hang of it.

Hello All,

I am looking for a computer controlled receiver.
Preferably with a frequency range of 300-500MHz, it must have an IF bandwidth of at least 1MHz.

If your company makes receivers of this nature, please email me with specification details and possibly a web address for viewing your product(s).

Thankyou.

PA>Does anyone know how this would be done? Thanks , padank@earthlink.net

A bug that transmits an RF carrier can be picked up on any receiver
tuned near the bug's frequency. Since you don't know the bug's
frequency, a scanning receiver has to tune through a LOT of channels.
A small spectrum anlyzer is better.

MO>Subject: RG-213 Coax

MO>I have been given a 25 foot length of RG-213 with BNC
MO>connnectors/adapters. It is brand new and has mil spec numbers on it.

MO>They are M17/074-RG213 Mil-C-17 12515 Teledyne Thermatics.

MO>It this good coax for scanning 30-1.3 with ? It obviously is military
MO>and I was wondering if I could use it. Thanks for the help

RG-213 is fat stuff with a 0.4" outside diameter. If you have BNC connectors (bayonet lock) rather than N (screw-together connector) on it then you have a rare BNC with a fat body. Times Wire & Cable table yields the following loss in db per 100 feet: 1.5 @ 50 MHz, 2.2 @ 100 MHz, 3.2 @ 200 MHz, 4.6 @ 400 MHz, 9 @ 1 GHz

A 25 foot length would have around 3 db loss at 1.3 GHz; 2.25 db for cable, 0.75 db for both connection interfaces (give or take). Half the signal power is lost in the cable at the high end. There is better cable but it's hard to beat your price. :)

4384. FM discriminator mods??

Newsgroup: rec.radio.scanner
Date: 1996-09-10 00:00:00 UTC
From: awmunn@vela.acs.oakland.edu
Message-ID: <5139jf$heq@news2.acs.oakland.edu>
Source record: 223614

I'm looking for a source of mods for adding an FM discriminator output to scanners/receivers. I'm also looking for a source of cheap receivers which cover 931mhz.

Thanks...

Andrew

I have read all the FAQ's for this radio, however I can't seem to find any mods for this radio. But most of all I can't seem to find out how this a/b switch is suposed to work. When I switch it from a to b it still reads out the same channels. If I program a different channel in it changes it, but on both the a and b side. What am I doing wrong? Is it possable this swith is bad? Any answers?

What cordless phone use 30.075-30.300?!? I think you might be mistaken there. Try 43.720-44.480 and 46.610-46.970 (Baby monitors are in the later freq range). Also, most fast food drive throughs are in the top side of the 30MHz range.

>i am looking for any frequencies from the Georgia area as a whole. thanks guys
>--
That's a pretty broad request. What and where in particular are you
interested? The State highway patrol frequencies are 154.680/154.800
(the first is base-to-car and car-to-car, and the second is car-to-base).
They use a duplex system like that over most of the state, without repeaters.
In the Atlanta metro area is one exception, the state patrol uses 155.910
(repeater output). Also, statewide you will find use on 154.905/154.935,
another combination similar to the previously mentioned pairing. This is
entitled "interstate sheriff", and in truth you will find everything there
from GSP units using it as alternate frequencies, county sheriff offices
talking with each other, even county sheriff units using them as "secret"
frequencies. Another statewide frequency used it 155.370, labelled
"intercity", which is where one police department will sometimes call another
to say something like send a unit to meet my unit at the county line",
or whatever. The state bureau of investigation, GBI, can be found on either
of 155.505 or 154.815, depending on the part of the state.

That is just a few of the frequencies used statewide from time to time.
Depending on where you are and what you want, there are of course more.

Fred

I have compiled this list myself, it is not complete. Some of the
things I am missing, and would love to have include the CID NARC channels
and the Chester City NARC channel. If anyone has additions or corrections
to the list please contact me by email. I have also had this list posted
on the WWW at the Philadelphia Area Scanner Page run by Greg Rendell.
It is located at http://www.geocities.com/CapeCanaveral/1273

Enjoy!
Delaware County Police Frequencies

506.7625 Police Sector 1 - Aston, Bethel Twp., Upper Chi. Marcus Hook,
Trainer, Lower Chi.
506.8375 Police Sector 2 - Parkside, Upland, Brookhaven, Chester Twp.
Newtown Twp., Upper Prov. Twp., Morton,
Swathmore, Nether Prov. Twp.
506.8625 Police Sector 3 - City Of Chester

508.0875 Police Sector 4 - Lansdowne, Aldan, Clifton HTS., E. Lansdowne,
Yeadon, Darby Boro, Colwyn, Sharon Hill,
Collingdale, Folcroft, Darby Twp.
508.1125 Police Sector 5 - Glenolden, Prospect Park, Norwood, Tinicum,
Ridley Park

508.1875 Police M 1 - Same as Sector 1

508.0625 Police M 2 - Same as Sector 2

Police M 3 - none used by Chester. They use only S-3 or Foxtrot
(see below)

506.6375 Police M 4 - Same as Sector 4

506.6125 Police M 5 - Same as Sector 5

508.3375 Park/Court Police

506.3625 CID

DATA 1 EAST 506.5625-----DATA 2 WEST 508.4375
These channels broadcast the same thing. Referred to as
"Clean" by police units. Used to get license info on stops

COUNTY 1 508.0375-----COUNTY 2 508.2375-----COUNTY 5 508.3375
County 3 & 4 are unknown. At least by me they are.
All of these channels also have other uses. (see in list)

506.7375 "Alpha" (S-1) / "Charlie" (S-4) - car to car or car to station

507.8125 "Bravo" (S-2) / "Delta" (S-5) - car to car or car to station
Also used by Delco Prison units
508.2375 "Echo" (CID) unit-unit
Also Sheriff's Dept. main channel (about all this dept. does
around here is transport prisoners. They also serve warrants. This
can be interesting to hear at night.)
506.7125 "Foxtrot" (S-3) - car to car, car to station

155.475 - The "everybody has it" channel. I have heard surveilance ops on
this freq. at low power. Interesting listening.

PD's dispatched individually:

500.3375 Radnor Twp.
500.6125 Springfield Twp.
506.3125 Ridley Twp./Eddystone Boro (scrambled, usually can't hear much)
453.225 Marple Twp.
453.275 Haverford Twp.
159.090 Upper Darby Twp./Milbourne Boro

4398. BC3000xlt Assistance Needed

Newsgroup: rec.radio.scanner
Date: 1996-09-10 00:00:00 UTC
From: nobody@nowhere
Message-ID: <513s05$d4m@mrnews.mro.dec.com>
Source record: 223628

Hi,
I've had my new BC3000xlt for a week now. I love the radio, it does
great. But I believe I have a problem and would like some comments.

I have 460.200 in bank 2 channel 21. I scan , it does not pick it up. I go to
manual mode on 21 and I hear signal fine. I put on priority (which 21 is a
priority channel) and it picks up the signal fine. I load the same freq. in
bank 2 , but in channel 38. When I scan it picks it up perfectly on channel
38, never on 21 (unless priority is on). I've also had the same issue if that
freq was in channel 28, it skips it. But it will find it say on channel 161 in
bank 9? Wierd...any ideas? Could this thing have a software problem??

Maybe im missing something since I understand the radio sorts freq. in each
bank during scan...I do not have the channel L/O either.

Thanks
Roy - Please mail: Roy@hylndr.enet.dec.com

Are the two mutually exclusive? I have a fully enclosed RCA (complete
with red and chrome lightning bolt metal logo) 10" alnico-5, brown
tolex covered movie projector speaker. I got it at a flea market for
a couple bucks. 500 mW will drive it to room filling volume. This,
combined with a Lowe HF-150 (communications receiver) provides an
excellent approximation of "hi-fi".

That really doesn't matter. The item has a value in the market REGARDLESS
of what you paid for it, even if that value is less.

Watch the stock market for a week if you don't believe me...

Roy,

I have a *similar* problem to which I've received at least 3 replies via-email confirming that the problem does in fact exist (including European versions of the BC3000). I have not seen problems with the unit "skipping" active frequencies except in relation to the priority channel not being the first of each bank. The problem I describe below is easy to work-around ... just keep priority off or keep priority channels in the first bank to be sure you get what you expect. If the unit is actually skipping active frequencies outside of the priority problem mentioned below then I would be worried. The big problem is that this could happen occasionally and you would be hard pressed to know since a skip on an active frequency wouldn't draw attention to itself unless you were manually scanning and saw activity and then scanned and found it could not pick it up. When I ran the experiments below, I used my local NOAA weather channel which has continuous broadcast to test the fact that the scanner was really skipping the channel on PRIORTY search. Again, I did *not* detect any problems in non-priority mode (or if priority was on but not changed from the first channel of the bank - and to make matters more complex, some combinations worked and some didn't), but that doesn't mean a non-priorty search problem doesn't exist. Although it could be dependent on your channel setups, I'll try your situation above except I'll substitute my NOAA channel so I can guarantee activity on the channel.

My original post is enclosed below and I have emailed you as requested in your post.

Dave Bernazzani
N1WSQ

I wonder if anyone else is seeing my "priority scan" problem with the
Uniden BC3000XLT scanner (firmware rev USA 0.20):

I have the following Ham frequencies in banks 161-200

161 146.6400
162 146.6700
163 145.2300
164 145.2100
165 145.3100
166 147.9150
167 147.3600
168 146.7000
169 146.7750
170 147.3000
171 147.0300
172 147.0900
173 146.8950
174 147.1350
175 145.2500
176 146.8800
177 147.2100 P
178 146.9100
179 146.8500
180 146.9850
181 147.1500
182 147.2250
183 147.1800
184 145.1300
185 146.8650
186 145.4700
187 145.3500
188 146.8200
189 147.0150
190 145.3300
191 146.5050 P
192 000.0000
193 000.0000
194 000.0000
195 052.4200
196 053.8700
197 446.5750
198 444.7000
199 000.0000
200 000.0000

If I have priority set on 161 and 181 (defaults) then it works fine.
If I have priority set on 162 and 181 it works fine, etc. But some
combinations fail. If I have Priority set on 177 and 191 then I get
the display to show bizarre search channels when it looks for priority

activity. Sometimes I see it "search" 425, etc. It sometimes goes off forever looking for priority channels. Also, if I have priority on 161 and 191 then it will correctly detect priority on 161 but never on 191 even though banks 9 and 10 are selected for the scan. Seems like it really wants the priority channels to be first in each bank. Could anyone comment on this problem or if you have seen anything strange with priority searches with the BC3000. Although I realize it would take some time... could anyone program the above freqs into banks 9 and 10 to try this? I would greatly appreciate any help anyone could provide me in this matter.

Thanks in advance and take care,

Dave Bernazzani

Wel, Sears hasn't had a "Big Book" catalog in years, but J.C. Penny sends me a postcard good for a free catalog every time a new one comes out -- I buy things from them and they realize that I willl continue to do that if I have a catalog. Radio Shack salesmen ask me for my address every time I buy something. Couldn't Radio Shack use that data to create a mailing list, to send out postcards good for a free catalog?

This is me speaking. If my company had an opinion
on this subject, it might be different.

Actually, several of the groups are a world-wide forum (but we agree that wa.general is probably not us!). Unfortunately there is no Washington (WA) State specific online forum. And worse the stupid newreader I'm using doesn't appear to allow me to delete wa.general from this reply. Sorry about that.

At least its posting on the global rec.radio.amateur.misc has been of value because I live in WA state also and would not otherwise have known about this issue. Now, let's not spend lots of time arguing amongst ourselves - that rarely accomplishes anything - I've already written to the State Patrol and my elected representatives on this. I'm also posting comments on our internal company ham radio group forum where perhaps 200 more hams in WA (the U.S. one) will hear about this poorly worded proposal.

Mike....hurry and get the BearCat Hand held scanner
with 100 channels and all you want minus cellular and
800/900 mghz....

has weather and more....air and more....model bc120xltb
price: 99.95 american..plus postage....

sells in Scanner World for $139.95

good unit and will give you basic listening..but
you have to find out what channels the agencies
you want to listen to use...so you have to go to
A RShack store with an ATTITUDE and pay for their
Police Call Plus book.....then you will know what
freq's you need....

100 will suffice for most areas and will get you
local pd and fire and ambulance and sheriff and
highway patrol and state police and weather and
tv and print media frequences in your area....
sports freq's of the big players...NFL, etc.
RACE car channels i your area of run there.

Again, great price....100.

bill conduit
the "etc" guy

DAMARK 800 number: 18007299000

don't forget to get the Grove Catalogue as it
has books in it you will need. So does the
Scanner World catalogue...books to help and
books with freq's to listen to and more.....

Could someone just explain to me how many channels is
>suitable, frequencies etc? I am interested in having the ability to

listen in

I would argue that the general public is by far more likely to get in the way of emergency crews. You can confirm this by taking an informal poll at the next emergency scene YOU rush on over to in order to determine how many people there at least own a scanner.

Maybe you are content to accept the fact that a few bad eggs are representative of the rest of us. Well I am not.

As for the irrelevent stuff, I guess I can overlook O.J. and Saddam.

Uh, yeah, if they don't happen, I guess you're right, they "obviously go unknown..." Hard to argue with that logic! ;)

> I have seen several posts in this newsgroup along these same lines. I
> think all involved should grow up and realize than scanner buffs are
no
> different from the public at large.

There are a lot of SCARY looking individuals who are into the radio hobby! Going to the Dayton Hamvention or Monitoring Times Convention can be like going to the zoo, in terms of sights, sounds (& unfortunately, smells) -- so yes, IMHO there is a noticeable distinction between a random set of people plucked out of general society, and a random set pulled out of some RF monitoring hobby group!

But the relevent difference in the basic 'ambulance-chasing' scenario is that while the general public might be just as likely to get in the way of the public-safety crews as the 'scanner buffs,' the scanner buffs are the ones who at times will specifically head to an emergency-run due to learning about it from monitoring, whereas the general public is going to already be in the area on other business, or hear about it after the fact via normal media outlets.

> There will always be some bad eggs.
> At least we are no where near as bad as politicians and lawyers

(usually
> one and the same) who are by far more crooked than the public at large.

Poor excuse. O.J. can say that at least he only murdered two people,
so he is "no where (sic) near as bad as Saddam Hussein, etc.

> Just witness how many of Clinton's cronies are in jail, under
indictment,
> or under suspicion.

Please save the irrelevent stuff for the scanner forum on Compu$erve,
Jeff! ;)

Toronto Hydro moved to a 900 MHz trunked system quite a while ago.

Frequencies are: 936.6375 936.6500 936.6625 936.6750 936.6875

They are also using 413.6375 (I believe for underground comms).

I've been doing breaking news for over seventeen years now and cannot connect the dots you claim are there in front of me.

The only ones who really get in the way are NEWS CREWS from the t.v. stations or some neophyte camera handler who just got hired by a small weekely paper. I've seen more "getting in their way" done by the media than I have by people who have scanners in their hands behind police lines watching the even unfold.

Media gets access and as such gets closer to subject...public has to stay furhter back and then see it on tv for what they missed. Cops set up their perimeter lines and that's it. In most situations everyone stays behind the yellow lines, even the press.

Again, i have really not seen any consternation caused by globs of ugly people with scanners in hand demanding to be able to get closer with dead bodies on the ground some 100 feet further ahead.

The only thing I can think of is "those who are with scanner park too close to the scene and get hassled for driving over a crime scene...." The cops just don't allow people to get access which is not thought to be "right" in their eyes.

Maybe people in the San Fran area who listen to scanners are a bit more good-looking and have the presence of mind not to tread where it's a bit "revealing"....maybe here it is a more "educated" looker. More sophisticated. Could be people with weak stomachs too.

I've used a couple of PRS-100s for close to three years now and I've never heard another person on either of the 2 channels the units are capable of operating on, 2 of the same frequencies FRS uses. The only interference I've run into has been pager transmitters and nearby GMRS mobiles bleeding over from the main frequencies.

THERE IS NOTHING ILLEGAL WITH FOLLOWING A TRUNKED SYSTEM.. There is nothing illegal about that at all.

THE PROBLEM IS THE FACT THAT IF YOU KEY-UP on the system, THEN You are an unauthorized user on the system.. I don't believe anyone would be arrested JUST FOR HAVING A RADIO ..

At least here in GA.. I have a radio with systems.. that I monitor.. Never had a problem.

4440. Family Radio Service (FRS) equipment?

Newsgroup: rec.radio.scanner
Date: 1996-09-10 00:00:00 UTC
From: Steve Kagan <2WSK000@gc.maricopa.edu>
Message-ID: <19960910003045.aaaa0005B@babyblue.cs.yale.edu>
Source record: 223692

Not only does the new Radio Shack offering have only the seven 467 mHz channels (missing the seven 462 mHz ones), but it has no provision for PL squelch (either tone or digital), nor can it scan.

The radio may be set internally to any one of the seven channels. I think the user can do that with DIP switches. But it's a one-channel (at a time) radio. In addition to having only a seven-channel capability (one at a time), it cannot be programmed from the front panel, has no channel switch, and has no tone pad.

In any case, might Radio Shack be planning a more featured radio? The current one is a pretty high-priced Motorola-manufactured set.

Radio Shack's (license-required) GMRS radio offerings include a Motorola-made one, plus a less-expensive, but more-featured scanning Radio-Shack-branded model. Neither has any type of PL (tone squelch), though, and lacks a Touch-Tone-pad (programming) front panel.

So, could anyone post whether other manufacturers are going to offer Family Radio Service equipment? Those who know about that seven-channel (one-channel-at-a-time) Radio Shack/Motorola FRS product will agree that it's a mighty weak starting entry, indeed.
Steve

4441. Re: HARBOR PILOT'S FREQUENCY

Newsgroup: rec.radio.scanner
Date: 1996-09-10 00:00:00 UTC
From: mulligan@ACM.ORG
Message-ID: <512udq$j02@HOPPER.ACM.ORG>
Source record: 223693

New York's Ambrose (Sandy Hook) Pilots use Marine Ch 8, 156.400 MHz, for dispatch, i.e. the boat that meets incoming ships and picks up pilots from outbound vessels. Harbor operations are coordinated through "NY Traffic" on Ch 14, 156.700 MHZ. Pilot-to-tugs would be on one of the port operations channels (particularly Ch 77, 156.875) or the bridge-to-bridge frequencies (Ch 13, 156.650 and Ch 67, 156.375). Besides the VHF channels, pilot-to-helm might use the on-board UHF freqs: 457.525, .550, .575 & .600.

The Marine VHF band is 156.050 to 157.425 for ship stations. 156.775 and 156.825 are _not_ used; they are the guard channels for Ch 16, 156.800, the distress, safety and calling frequency.

There is no such law here in Canada. You do not need any type of
media press pass. You can get one though. Not that it ever makes any
difference. I have been asked for mine maybe 5 times in the last 4
years that I can remember. Only once it made some difference.

> As for Arson...gee, If you are in the media as claimed,
> or others who are in tv land, why not get a copy of the

> of the Press I understand is an "alien" concept up there.
>
Freedom of the press. That's a joke. Some have been arrested for
abstruct police only to have it thrown out of court when no such
evidence was found to justify such a charge. Its something the media
is threatened with daily.

As for getting a copy of the arrest report, I'm not sure how how that
works. I've never tired. I'm not a reporter. I just posted some of
what I know.

> Has anyone interviewed him since being released to get his
> side?

I would guess that until he comes before the courts and because these
are tools that can be used in what he may be charged with, then a
court can order with the request of the prosecutors that they be held
as evidence or until the outcome of the trial. This is Canada eh!

> Also, seems that they have a witness which they are not telling

Sound like someting that should be followed up on but generally the
media likes to report when an arrest is made. If it is a low profile
case such as I think this one is then they don't seem to follow up.
It is of interest to you and me but the general public I think does
not care.

The law makers here have a lot to learn. The media is threatened with arrest almost daily here. I think the problem is that police do not have media relations training. They do not know what they can and can not do. One case I know of well, the police policy on dealing with the media was requested by lawyers for the defendant but the police would not provide it. The judge was not very happy with this and helped in tossing it out of court. This person still has to deal with the fact that police records still show that he was charged but not convicted in the past. The fact that it does not say the reason for the charge, and that he is a member of the press and that it remains on record is a threat enough. The fact is that the charge happened over a dispute of where a car accident could be filmed from.

>>
>> A fire department said they have been bothered by him for some

It's not hard to show up before the fire department does. Depending on their method of dispatching, the way the call is received and you already being one the road. Its only a matter of time until your around the corner.

The fire department are not race car drivers. Not always is their response time the greatest. Depends on the area.

I have one from EEB in VA. It is the BEST scnner antenna I have used yet! As a matter of fact they have a base antenna I am considering as a replacement for my discone and others I use. IT IS THAT GOOD! I bought a CONDOR at the Grove convention a couple of years ago and it was money wasted.

>: interference I've run into has been pager transmitters and nearby GMRS
>: mobiles bleeding over from the main frequencies.

> That gets me..... Thr GMRS people are so worried about FRS bleeding
>over onto their repeater freqs..... BUT their own service interferes with
>its own channels :)

I think there is a misunderstanding here - FRS and GMRS share
interstitial frequencies in the 462.5625 - 462.7125 freq band and a weak
handheld, for eg. on 462.5625 is not likely to interfere with base operation
on 462.550 Mhz.

HOWEVER, the other severn FRS channels (not shared with GMRS) are the
interstitial channels BETWEEN the GMRS repeater INPUT channels. Here, a weak
handheld close to a repeater (a few blocks away) on 467.5625 may, in fact,
desensitize the repeater to a mobile unit on 467.550 Mhz 10 miles away, trying
to key up the repeater for 462.55 Mhz. To try to prevent this, the FCC
imposed stricter technical specs on FRS radios.

CHP mobiles are not on repeaters and are always (except for the "blue" channel) on simplex. Look up the mobile freq for your area in "CHP" scanning, published by "The Base Station" in Concord, CA.

The Sky Scan Desk 1300, desktop discone can be ordered by calling Graham at SRP Radio Center/Trading in the United Kingdom (That's England for you no-brainers) by dialing: 011 44 1562 730672.

If you are in the United States that is a direct number, and England is 5 Hrs ahead of the Eastern time zone.

4452. Does Radio Shack often sell used equipment as new?

Newsgroup: rec.radio.scanner
Date: 1996-09-11 00:00:00 UTC
From: frisbie@flying-disk.com
Message-ID: <1996Sep11.090121.950@flying-disk.com>
Source record: 223455

I am curious if Radio Shack does the same thing with scanners that they do with telephone answering machines: sell used units as if they were new?

Twice in the last two years, I have purchased telephone answering machines at the Radio Shack store in the Pasadena Plaze (Pasadena, Calif.), store #01-3691. In the first case (29-Sep-94) the tapes already contained someone else's outgoing and incoming messages. Since the machine worked OK at the time (it failed this month), I was willing to let it pass even though the machine had been sold to me as a new machine.

Last week (04-Sep-96), I visited the same store to have my old machine repaired and to buy a new one. When I returned to my office, I discoved that the machine was obviously used: much of the packing was missing, the cords were not secured with twist-ties, the tapes had been opened, etc. To make matters worse, the machine did not work. Upon plugging it in, it moved the tape for a few seconds and started an incessant beeping.

When I returned it, the store manager (Al Arzabak, who had sold it to me) showed no surprise at my complaint. He said that he had no new units in stock, but offered to call around to other stores. As I listened to him make the calls, it became clear that this is a common issue, as he casually referred to "fresh" units.

Does this same sort of thing happen with scanners at Radio Shack?

Is a pig's a$$ pork?

Why do you think that almost nothing which Radio Shack sells comes in a sealed box? Most everything they have (except for the blister-pak parts) comes in some type of unsealed box where the unit can be replaced convienently in the box and it will look reasonably like an unsold unit. I've pretty much concluded that this is by design. Don't we all agree that their merchandise tends to "boomerang" after people take it home and find it doesn't work? And do you really think that all returns go back to the factory to get reworked? Do you really? Perhaps if you do, you might want to quit smoking the wacky weed for awhile.

The best way to avoid this is just to obey this simple rule: If you have more than $4 to spend, don't spend it in a Radio Shack. Almost always you'll find a much better equivalent product which hasn't been sold 4 or 5 times somewhere else.

And besides, don't most of us agree that the good RS scanners really are the ones which are no longer made? Why pay a new price for a used scanner when you can pay a used price for better one.

Scanners, CB radios, ham radios, car stereos, etc., etc.

Having previously worked for Radio Shack, I can tell you that it is
common practice to resell customer-returned merchandise as new.

Hello - thanks for reading this msg.

I'd like to know if there's any software, for Win95 or Dos, that could be used with a Sound Blaster 32pnp board to record a sound to a file, but only when there is a sound present at it's input - for use just like a voice activated recorder, but recording to a sound file instead of a tape...This is particularly interesting, as one could later post process the recording, using filters, GSM or MPEG compression for archiving, and so on.

Please email your answers because my news server sometimes loses posts.

Thanks in advance for your time,

Source record: 223468

My findings on the "Skipping Frequencies" problem:

I confirmed once again that 460.100 and 460.200 in the same bank causes activity on 460.200 to be skipped. Again to review, I could get things to work okay if I changed 460.100 to 460.105, or 460.200 to 460.205, then it would pick up activity fine.

So today I powered up the radio with scan button depressed. I get the "ON dir" message. A little up arrow appears on the screen. This shows the direction of sorting. Up arrow is the normal direction. I confirmed I was still missing activity on 460.200. Then immediatley upon shifting direction (now I have down arrow), did this by hitting SHFT/LMT (down button), the activity on 460.2 and 460.1 worked fine! SO changing the sort direction solved my problem. I don't understand it, but at least I don't have to worry about missing activity on frequencies
that are close together and in the same bank.

When a friend of mine gets a bc300xlt, im going to test it to see if the same thing applies on her radio. If it does I suspect the US 020 version of the firmware may have a bug?

If you're really refering to OCSD, 460.425 ought to be correct -
Bear in mind, (unless things have changed significantly since the
last time I looked) that the SO uses this freq for dispatches throughout
the county -

4468. Invest $5

Newsgroup: rec.radio.scanner
Date: 1996-09-11 00:00:00 UTC
From: Tom Lowe <dont@answer.com>
Message-ID: <323713A2.4642@answer.com>
Source record: 223471

Taking 5 minutes to read what follows could be one of the best decisions you have ever made.

On August 21, 1995, I saw an article in an internet newsgroup telling me I could make $50,000 within a month for an investment of only $5.

I thought it was a huge joke. I spoke to my attorney, friends and wife about it, and they all agreed it was some kind of scam. I can't stand scams, because usually someone gets burned, and I didn't want it to be me. After rejecting the idea at first, I realized all I had to lose was the $5 in my wallet, and not much else. So, needing more than just $5, I figured what the heck, and gave it a shot.

Two weeks later, I began recieving money in the mail! I could not believe it! Soon, hundreds, and then thousands of dollars began to roll in. Within 4 weeks, I had recieved a total of $32,445! It came from everywhere in the world.

If you follow the three steps below, there is no reason why the same shouldn't happen to you! This is a legitimate investment opportunity. You invest $5, and you recieve a return on your investment. So does the next investor. NOT ILLEGAL, NOT A CHAIN LETTER- PERFECTLY LEGITIMATE.

If you are not interested, then don't participate, but please print this article and pass it on to someone who may be interested, so they can take advantage.

The procedure is simple:
1) Write your name and address of 5 sheets of paper. Below that, write the words, "Please add me to your mailing list." Fold $1 note or bank draft or money order in each piece of paper and mail them to the following 5 addresses.:

1. Greg Carrol, 3658 Maurice Ave. Ft. Worth, TX 76111 USA
2. Mike Burek, 2007 Sunny Brook Drive, Austin TX 78723 USA
3. Joseph Foreman, 27 St. Georges Cres 3147 Ashburton, Vic. Australia
4. Rick Berk, 17-7 Pondway, Manorville, NY 11949 USA
5. Tom Lowe, P.O. Box 203 17080 Girona Spain

2) Now remove the top name from the list, and move the other four names up. In other words, #5 becomes #4 and so on. Put your name as the fifth one on the list. you can do this by simply retyping the article or reposting it to other newsgroups with the edited addresses.

3) Post the article to at least 200 newsgroups. There are 17,000, so it shouldn't be hard to find that many.

You are now in the mail order investment business, and should start seeing returns within a week or two. Of course, the more newsgroups you post to, the greater your return will be. If you wish to remain anonymous, you may use a psuedonym, but make sure your address is correct.

Now, here is why the system works:

-Of every 200 posts I made, I recieved 5 responses. Yes, only 5. You make $5 for every 200 posts with your name at #5.

-Each person who sent you $1 now also makes 200 additional postings with your name at #4. ie. 1000 postings. On average therefore, 50 people will send you $1 with your name at #4. $50.

-Your 50 new agents make 200 postings each with your name at #3 or 10,000 postings. Average return 500 people= $500. They make 200 postings each with your name at #2=100,000 postings=5000 return at $1 each=$5000. Finally, 5,000 people make 200 postings with your name at #1 and you get a return of $50,000 before your name drops off the list. AND THATS IF EVERYONE DOWN THE LINE MAKES 200 POSTINGS! Total income in one cycle= $55,000.

From time to time, when you see your name no longer on the list, you take the latest posting that appears in the newsgroups, and send out another $5, and put your name at #5, and start posting again. Remember, 200 postings is only a guideline. the more you post, the greater the return.

Lets review why you should do this. THE ONLY COST IS $5, AND 5 STAMPS, AND 5 ENVELOPES. Anyone can afford $5 for such an effortless investment with such SPECTACULAR RETURNS.

Some people have said to me, "what happens if the scheme is played out and no one sends me any money?" Big Deal, so you lose $5-but what are the chances of that happening??

There are millions of internet users, and millions of new net surfers every month.

Remember- read the instructions carefully, and play fairly. thats the only way this will work. Get a printout so you can refer back to this article easily.

Try to keep a list of everyone that send you money and alwys keep an eye on the postings to make sure everyone is playing fairly. You know where your name should be.

REMEMBER-HONESTY IS THE BEST POLICY.
ENJOY!!!

When I returned to my office, I discoved that the machine was obviously
used:
>
>Does this same sort of thing happen with scanners at Radio
>Shack?
>
It ain't the company, it's the manager. Anything that is returned is supposed to be in new, resaleable (spelling) condition. If the manager is taking in used equipment that ISN'T resaleable and selling it as new...you need to go to another Radio Shack. "My" Radio Shack, where I have been trading since 1978, (same manager, too.) will take in used stuff to appease a disgruntled customer, even if the customer is wrong. He has surely been taken advantage of in the past, but overall it is a good practice...keep the customer happy. Anyway, he then re-packs the equipment and sells it either "as-is" or at a reduced price in order to offset some of the loss. The customer is aware of the status of the item. Managers that do otherwise are wrong. Don't go back to that store...and/or call the district manager. My experience is that the district managers feel the same way the manager of "my" store does.

FWIW, when I buy a scanner from Radio Shack, I ask the manager to put the unit on the floor for about a week before I pick it up. Even though RS has probably the best quality control in the business, there is alway the rare chance that a piece of equipment could swallow its teeth right out of the box. If it has cooked for a week or so and has had no problems, it'll probably work for years. I think they call that phenomenom "infancy mortality." Nowadays, with the quality of parts, etc. it isn't so much of a factor, but old habits are hard to break. I wouldn't call that a "used" scanner, but rather a "tested" scanner. Kind of off the subject, but what the heck...

NEW PATENTED DEVICE GUARANTEES INTERNET USERS
CONNECTION PROTECTION, SECURITY AND PRIVACY

BOISE, ID. -- Accessing the information superhighway on a single phone line can be a real pain. Remember the last time you were on the Internet and someone picked up the other phone? ZAP! Say good-bye to your connection. Ever need to make a private phone call without worrying about someone interrupting or listening in on the other line? Have you ever had your fax transmissions interrupted when someone picks up an extension phone on the same line? Until recently, the only solution was to install an expensive second phone line. But that is about to change.

Introducing TelePrivacy Plus, the patented low-cost, high-tech way to connect and protect your modem and fax line. It's easy and it installs in seconds. Just plug TelePrivacy Plus into your existing phone jacks, and your telephone, modem and fax become secure from any outside interference. No more broken connections. No more corrupted downloads or garbled faxes. No More interruptions!

Those features alone can save you a world of time and frustration. But TelePrivacy Plus also offers a secure phone line. Now you can prevent eavesdropping and interruptions every time you make or take a call. If you let someone else in on the line, or if the call is for someone else in your home or office, that's easy too. Just push a single button. TelePrivacy Plus does it all!

TelePrivacy Plus is fully compatible with all your favorite custom telephone features such as Call-waiting, Voice-Mail and Caller ID. It even works with cordless phones. And TelePrivacy Plus is fully tested and approved by the FCC and Underwriters Laboratories.

TelePrivacy Plus is just one of the hi-tech marvels offered by LOOKOUT VENTURES of Boise, Idaho. Dave Dollarhide, owner of LOOKOUT VENTURES states "The Internet has become one of the most efficient and economical ways to communicate, worldwide." The only thing missing was stability and security. TelePrivacy Plus changes all that. This is the answer you've been waiting for."
"No computer, Fax or Phone should be without Teleprivacy Plus!"

LOOKOUT VENTURES welcomes dealer inquiries from across the country. All inquiries should be directed to Lookout Ventures, (208) 381-0133 or you can also contact LOOKOUT VENTURES on the internet at www.thelookout.com, or e-mail info@thelookout.com.

Source record: 223479

You can start scanning at around 900 mgz up and you will find sone, not all of the cell freq. in what is called a mirror or ghost frequency. the 870-890 mgh reappears (mainly in radio shack scanners) about 21 mghz above the actual freq. This does work! you will hear some but not all. this requires no hacking or opening of the scanner. Just start around 900 und scan up.

> the county -

Hey guys,
You are both on the right track. OCSD uses a OC Marshalls freq for north Orange County. This is called the 506 system. Stanton is on this system. The freq is 507.1125 with a PL of 103.5. 460.425 is the central and southern portions of Orange County. San Clemente which is served by OCSD uses 460.175. Hope this helps out until we switch to that overkill digital 800 trunked system.

Happy listening- MONITOR 1

Ron Katz <ronkatz@interlog.com> wrote:
>Hay Rocket Scientist, do you really think that anyone has a rock solid
>shortwave receiver that's bang on frequency or what? dahhh

You don't need a rock solid shortwave receiver that's bang on frequency.
Even the cheapest portable SW receiver will work fine as long as it can
receive the WWV signal, since all you're doing is listening to the difference
(heterodyne) between WWV and your scanner oscillator. The critical thing
is for WWV to be bang on frequency, which is a safe bet.

>BTW Engineer, any metallic object such as the jewelers screwdriver you
>suggested will cause the inductance if a coil to change when it is
>inserted. If in this case its a trim cap then you are also effecting
>the capacitance while the tool is near. While adjustments are made
>after removing the tool it will change and drift again as the trim cap
>sets into its new position...

I don't know whether this occurs in the 2006, but I've seen it happen
quite often in other receivers. Once you recognize the problem it's easy
to compensate for it. Suppose you notice that the oscillator frequency
drops 5 hz as soon as you remove your tool. Simply set it 5 hz high so
that the drift will bring it right down to where you want it. It may take
you a few tries to get it just right, but it's not difficult. I once had
a more annoying variation of this problem in a poorly shielded circuit
where replacing the metallic cover of the radio caused the frequency to
shift. That can make the "trial and error" process a bit more painstaking.

>If you don't have the correct tools to do the job..DON'T DO IT

Even non-metallic alignment tools can introduce some stray capacitance
into a critical circuit. Non-metallic tools also don't solve the problem
of "backlash," where removing the tension of the tool from the component
causes the setting to change slightly, so you still may end up having to
compensate somewhat. Granted, it's always easiest to do the job when
you've got the best equipment available; and there are those who argue
that you should never attempt any RF alignment unless you've got $50,000
worth of test equipment on your bench. As Bill points out though, you can
often achieve satisfactory results with simple tools, a bit of ingenuity,
and a healthy dose of patience.

> cellular. Are they somehow exempt from the law pertaining to monitoring
> cellular phone calls ?

Many radio and TV stations have frequencies for remote pick-up and broadcast auxilary. These are VHF, UHF and microwave. However sometimes a phone call is easier and more efficient.

When they use cellular phones they are not monitoring the cellular channels. They are using it just as anyone else would, as a telephone. It is perfectly legitimate for a reporter to call in on a phone and be patched on the air. Both the reporter and the stations are parties to the call so they can do what they want with the phones.

This is a lot different than "monitoring" or "eavesdropping" on cellular frequencies.

> Are there any ACARS shareware programs floating about, ideally utilizing the
> AEA fax decoder, or the cheesy op-amp deal for POCSAG?

Well, from my experience, the software that comes with the decoder is what you get.

However, what you do with the data is another thing. I found a great shareware program called DACARS it is an ARCARS message processor. It tracks new aircraft, new flights, it has an aircraft and flight # database. It will sort on flight numbers, aircraft numbers, etc.

You can download a demo from:

http://barbie.epsilon.nl/~bart/dacars.htm

This is a sample of an optional text file that can get automatically created by DACARS when processing a session log. The format is date, time, aircraft registration, flight ID.
The asterisks indicate a new flight or new aircraft.

Hi Dave-

What I was referring to is the fact that communications receivers and hifi sets are not normally designed to do the same thing.

A hifi set is intended to come as close to approximating the original sound as possible, within intentional limits imposed by cost, size, etc.

A communications receiver (in the most common and classic sense of the term) is intended to receive a wide variety of signal types, including CW, SSB, AM, NFM, or some combination of those and other modes, in the form of two way communications (ham, commercial, public safety, etc) or broadcasts (local or international) or whatever else you might want to try to hear. Of all those possibilities, the only ones that are liable to be hifi would be local broadcasts, which you wouldn't normally buy a "communications receiver" to listen to.

Of course, another critical issue in this is "what are you going to listen to?"

If you are going to listen to international broadcasts, then you might want a more "hifi" type speaker, even though selective fading is going to clobber most of the "fi" before it ever gets to the speaker.

But, if you are interested in other aspects, such as CW (my favorite) or SSB, then a speaker with a little less range on the low and high end, but flat response in the 300 - 2500 cycle range, with low distortion in that range, might be better.

I guess "the sound of a speaker" is really a tremendously subjective thing, and I was too quick to say that my view was correct for anyone besides me, but I really do like the MS8 and I don't put any stock in the objections that the reviewers have mentioned, unless, of course, the object is indeed the pursuit of quasi-hifi.

73 and good listening!

Tom KJ5IE

I am not using a cb antenna and it works GREAT!! it was like 29 bux at
RADIO SHACK.. plus about 5 bux to convert it from a cb plug in to a
scanner plug in.. it picks up signals 50 km's away loud and clear..

Patrick,
you would not believe the "fun" I had. I started getting letters complaining about my activities. After I responded, it became clear that a bootlegger was using my call and creating some problems.

I now intend to create problems for him. I have drafted a letter back to the legal services Dept. of the FCC asking them to consider additional evidence in the case that they may not be aware of. I have also requested that Since Mr. Hoffman works 2 jobs, that he be made to pay the entire amount as indicated in the NAL.

Hopefully, that will teach him to mess with hams.

Eric.

Ahh... but I will. I have written on this subject several times in this forum. It doesn't happen always by just moving it from the first channel of a bank, only some combinations fail... but it's enough to make it difficult to use. I just keep the priority on channel 1 of each bank and it's happy. The 3000 appears to have the same problem with European versions as well (mine's USA rev 0.20). At least they aren't just picking on us Americans :)

What ever this discussion is about _black_ boxes it is incorrectly
titled. A red box generates the tones from a payphone.

A blackbox is a series of resistors in your phone preventing the
voltage from dropping when you answer the phone so the phone compnay
thinks that you never answered and whomever called you does not get
charged!!!!
.
>>plans for telephone blackbox. neat little device gives you free l.d.call
>>at payphones. Plans are $10. crystals are $5. whole unit built is $60.
>>

Do you really read every single post that shows up here?

Do you read every mod thread relating to radios you don't own or maybe never heard of? Do you read every post on frequencies for locations you will never visit, least of all live in during this life?

Have you really read every single post in this newsgroup every time you logged on to the Usenet?

If you want a moderated group then go put one together. I vote to leave this one alone. I moderate my own reading as I always have. No thanks.

Glenn

These people are really stupid. If it gets transmitted in ANY way,
someone WILL intercept it. And he MAY eventually put it to some use.

With a PC, a receiver, and an A/D converter anyone with a little
programming and digital info transmitting knowledge can do this.

That's a symptom of capacitor C36 being shorted. It's
a 220 uF 10v electrolytic, located on the component side
of the main board, connected from pin 8 of the audio
IC (IC2 NJM386SL) to ground.

Although Radio Shack sells a single 220 uF 16v cap (#272-956),
it is physically larger than the stock C36 and may not fit.
Radio Shack sells a blister pack assortment of electrolytic
caps for about $2.49 (#272-802). Look through them at the store.
I found some of the assortments contain the perfectly sized
replacement 220 uF 10v cap (Actually, I'd feel better about
using a cap with a higher voltage rating if it would fit in
the BC200XLT).

The bad news is that when C36 shorts, it shunts about 8 volts
from the NiCd supply to ground through a PNP surface mount
transistor, Q201 (2SB815B6-YDY), and can blow it up, too.
Q201 is located on the foil side of the "Micom" board,
adjacent to the black multi-pin connector which mates the Micom
and main boards together.

In a pinch you could replace C36, then bypass Q201 by soldering
a short piece of bare wire between the collector and emitter
of Q201. I think Q201's main purpose in life is to switch
off power hungry stages of the BC200XLT when the CPU thinks
the NiCd voltage has fallen below a threshhold. That's an
attempt to limit the current drain on weak NiCds to avoid
permanent damage.

Then again...neither Sears, JC Penny, Wards, etc are franchised
as RS is. They can afford to eat the cost out of their millions
in combined revenues. Now lest you think I'm a fan of the
fee-based RS catalogs, I'm not. This evening I received
my catalog no-charge and my purchase was a $3 button cell.
Almost picked up the $100 pen scope but they were closing
so I'll just swing by another time.

Like replacement parts? Sure. (800) 442-2425. But you'd best have the Service Manual to make sure of getting exactly what you want. Order it from the same number above.

On the other hand, if you wiped out the cellular diode and want to replace it or something comparable, you can use a plain 1N914 or 1N4148 switching diode, that even though larger and of a different style, will still work fine.

> What is this Commtronics place you work for

My company. Consulting engineers.

> and why do you call yourself scannist extraordinaire?

That seems to really bother people. Seems I'm not allowed to title
myself, it would appear. But when you work for yourself and are not
enslaved to "the man", you get used to calling yourself whatever the
hell you want.

"Extraordinaire" is a French word that doesn't mean exactly the same
thing as "extraordinary" in English. Used in the context that I use
it, it means that I take scanning very, very seriously......to the
point of excellence. Not excellence in "me"; rather excellence in the
performance of the equipment and in my processes and techniques.

My use of it seems to make some people "hyper", though.

> Don't get all hyper and refer to defication

I don't get "hyper", period. It's not good for the liver.

What's "defication"? I know what "deification" is, but somehow I
don't think you mean THAT.

>and other things.

Other things? What kinds of "other things"?

> I'm just asking because I'm curious.

No harm in being decent about things, that's for sure.

> N3SPD (you know who)

Sorry, I forgot..... :-) Decency has a way of doing
that to me.

There isn't much standardization to 10-codes. Your city's 10-code may be totally different than the 10-code used in a neighboring suburb. I worked in one city that shared a common border with another city, and we both had different 10-codes. We had to learn both to be able to communicate with our own officers and the neighboring city's officers. I'm now with a sheriff's department that uses a totally different system of codes and signals.

10-codes and other codes and signals were not developed as a way to keep secrets from listeners. They were developed as a way to keep communications brief, because radio channels are shared and it's rude to tie up a channel. Many departments that have exclusive use of their frequencies don't bother with codes...they use plain English. The sheriff's department where I work uses plain English most of the time, but the older deputies and dispatchers lapse into the old code and signal routine out of habit from the days before the department switched to a trunked 800 system with exclusive channels.

If your department doesn't want to tell you what their codes are, make friends with a cop and ask him/her.

> greatly appreciated! Thank you!

Mike,

When I started out in the scanner hobby I made several mistakes. First of all I too wanted to spend $100 or less, which since it was a gamble whether I would enjoy the hobby seemed reasonable at the moment. Over the years and as technology advanced I was constantly upgrading/improving and now have a trail of scanners and a fearful amount of money invested. So, knowing what I know now if I had it to do over again I would have plunged deep into the reaches of the wallet and went whole-hog.
(I think)

Being more logical, your scanner needs mostly depend upon what you are interested in hearing, police, fire, emergency/medical, cellular and so on. So first, investigate for instance the frequencies that your local police use most frequently and go from there.

Best Regards,
Shane

P.S. The above is simply an opinion based on my very own experience. Most certainly yours and others will differ. Nonetheless I hope RF scanning becomes an experience as enjoyable to you as it has to me.

DROOOOOOOL

I'LL TAKE 4 PLEASE!!!!

just kidding

Anyway...just a notice. Around Christmas (my girlfriend advance offered
to get me a scanner....what a sweetie) I'll be in the market for a scanner
that is:

a) Factory cellular enabled
b) modified
-or-
c) easily modifiable (as in clipping a resistor...I don;t want to burn
eproms or replace components or whatever)

My preferences would be either a pro-51, or a pro-43 or the BCXLT3000
(number sic)

or whatever a higher end Bearcat is

I'm prolly gonna have $150-200 at my disposal

SOOOO

If anyone anticipates the need to sell such an item long about
November/December, keep me in mind. I'll be prowling the groups daily
to find that perfect little gem, after I get the buying OK from her.

If for any reason anyone here wants to contact me at that time, my email
is five0@skypoint.com (altho replying to this post will work too)

I'll be posting another post like this around that time too.

Am I too anxious? maybe

-Bill

**
** When did that change? I was bounced from SCAN-L by
** Mr Laws himself because I flamed some idiot. If you take
** responsibility for content ONE TIME, you've got it
** permanently as far as the courts are concerned.

Not being a lawyer, I offer an OPINION here...

The difference may be on when the removal from the list occurred. If there was no prior restraint, then there is no moderation. If the list owner removes someone AFTER a specific post for that post, I don't think that would hold as moderation. SCAN-L is automated, and only resends what is sent to it, regardless of content. A moderated list would infer that the individual post is approved and distributed, or disproved and rejected.

Just removing an individuals posting priveledges on a privatly maintained mailing list such as SCAN-L would not define it as a moderated list, thus exposing the moderator to liability for the content of the posts.

Should Mr. Laws take to approving/disproving posts prior to them being resent, then he could expose himself to liability should that post be held to be libel or slander. I don't think he could be liable as SCAN-L is/was set up.

**
** (I still reject the stupidity of suing any of these
** people on the grounds listed in the lawyer letter.)

Geeze, aren't we touchy today. I look at it this way...

I don't think that scanner hobbiest in general make trouble for EMS
crew, just like I don't think most scanner hobbiest are arsonist.
But if you wanted to be an arsonist or gawk at traffic accidents,
then a scanner would be a tool of your "trade".

Just because you own a gun doesn't make you a murder ... just because
you own a scanner doesn't make you an arsonist/EMS gawker.

Hearing of other's latest catalog exploits I went in to get the low-down at the local RS. I went in and BOLDY asked for their new catalog. I was given two options

1) That will be $2.95 OR
2) I'll need to take your name and address

Since I was already in their wonderful database, I opted for #2. He scanned the catalog bar code, printed out a receipt and I was on my way.

Hay Rocket Scientist, do you really think that anyone has a rock solid shortwave receiver that's bang on frequency or what? dahhh

If your not willing to be responsible for people further mis-tuning their receivers why the hell do you suggest such a thing!

BTW Engineer, any metallic object such as the jewelers screwdriver you suggested will cause the inductance if a coil to change when it is inserted. If in this case its a trim cap then you are also effecting the capacitance while the tool is near. While adjustments are made after removing the tool it will change and drift again as the trim cap sets into its new position... What school did you go to?

Your not tuning up your wheelchair Billy. If you don't have the correct tools to do the job..DON'T DO IT

bcheek@cts.com (Bill Cheek aka Rocket Scientist) tried to write:

>NOTE TO ALL: This procedure is for the PRO-2004/5/6

It wasn't always this way. 2 years ago information was being exchanged. Now it's more akin to the trash that was spewed on the fight-o network. If you've noticed, alot of the real technical contributors rarely post here anymore.

>think not.
>

Most radio and TV stations utilize frequencies in the 161.xx, 450.xx or 455.xx Mhz range for what is termed "remote broadcast pickup" use. This allows the reporter or DJ to transmit audio back to the studio for broadcast over-the-air. Many TV stations use a repeater system, for example the input freq. is 455.250 and the output on 450.250. The reporter at the remote site listens to the program audio and cueing instructions from the studio on 450.250 and transmits back to the studio on 455.250.

How do cell phones fit in? Sometimes a remote must be done from a site that is out of range of the UHF link, so they dial up the cell phone(s), plug into the mixer board and are in business. During the time the cell phone is in use, they are paying the same per minute charges as anyone else. It doesn't violate any regulations because ** broadcasting ** to the general public is not taking place.

Standard in Japan. It is sold domestically in Japan as the Standard AX400
however it is also sold by the Diamond Antenna Co. as the WELZ WS-1000.

Scan-Star is commercial software, not freeware or even shareware. For demo copies of this and other OS456 software try the various web sites, CIS and AOL libraries, or the companies producing the software.

There are some shareware programs, such as Radio Manager, that allow you to use the OS456, but the feature set is restricted until you pay the fee.

Other programs to run the OS456 or OS535 units include Probe, ScanCat, and Wave for Mac.

4539. Re: BC3000xlt Assistance Needed

Newsgroup: rec.radio.scanner
Date: 1996-09-11 00:00:00 UTC
From: Roy <roy@hylndr.enet.dec.com>
Message-ID: <01bb9ff0$5268fc00$b4101e10@batmon.zko.dec.com>
Source record: 223545

Update on possible BC3000xlt scanning problem:

I've been interacting with folks via email on this, I'd like to keep the newsgroup thread up to date:

What I have found so far is the following:

When using 460.1 and 460.2 (both valid 12.5khz step freq) in the same BANK, activity on 460.2 is being skipped over. I then changed 460.1 to 460.105, or change 460.2 to 460.205 (I had to set to 5khz step in order to be able to enter those), I no longer miss anything on 460.2! As Dave Bernanzanni mentioned to me via EMAIL, it's possible that the bc3000xlt while sorting sees that 460.1 and 460.2 is close, so it listens on 460.1 via a wide filter, not hearing anything on 460.2 bleed over, figures nothing there either and continues on. So far that seems to be the case at least with my radio from what I've been experiencing. During lunch today I am going to try to reverse the sort order (via the undocumented powerup w/scan button on) and see if I am able to receive on 460.2 and not 460.1 (since the order is reversed). If this is the case then the theory is true. Maybe bearcat in efforts to achieve high scan rates is cutting corners? Remember if I make 460.2 a priority, it works no problem since they listen specificly to that freq every couple of seconds and is not part of the sorting that goes on during scanning.

** If anyone is in the Nashua NH area and has a BC3000xlt, try putting 460.1 and 460.2 in the same bank and put 460.2 in another seperate bank. Activate both banks, if you pick up activity on the other bank that just has 460.2, then disable that bank and see if it is getting it on the bank where both 460.1 and 460.2 are located. Post your results here, and please send me mail on roy@hylndr.enet.dec.com. I appreciate any help.

A friend of mine is going to be buying one of these in a couple of weeks, so until then I can't confirm if it's my radio or if it's a legit bug with current firmware on all bc3000xlt's...I'd like, and im sure other bc3000xlt owners, to know what the deal is on this....

Thanks!
Roy Golisano

I bought a Pro-43 at a Radio Shack in Mississauga a couple years ago, as well as some video equipment the year before since the items were on sale at the time. When I came back to the states I was asked what I purchased in Canada, and I told the customs officer, and he waved me through. I think you are allowed up to $250 duty free if you stay in Canada for 24 hrs or more, check this first.

As for getting in a radio that does not meet FCC specs, I don't think there is a problem as long as you intend it for your own use, and not resale, and do not use it for illegal monitoring, again you are on your own here...

$325? I bought mine new for $289. What's the catch?

4542. PLEASE Info on the best VHF/UHF scanner

Newsgroup: rec.radio.scanner
Date: 1996-09-12 00:00:00 UTC
From: Miro.Ivankovic@guest.arnes.si
Message-ID: <1996Sep12.205724@stenar.arnes.si>
Source record: 223348

Hello,

I am looking for the 'best choice' of the VHF/UHF (incl. Air)
handheld scanners. Could someone give me any advice on this.

However, I don't care about HF (SSB...) but I want a good perfor-
mance nearby 100-500 MHz (AM/NFM) and above.

Generally, all requirements are: good VHF/UHF and AirBand, high
level audio output and maybe standard batt. size - 'AA'

Thanks, in advance, for the help and any information.

Miro Ivankovic

4546. using cell phone to scan cell phones

Newsgroup: rec.radio.scanner
Date: 1996-09-12 00:00:00 UTC
From: tyler@cyberia.com
Message-ID: <519se0$4qs@crash.microserve.net>
Source record: 223352

Ok, I have an operational cell phone that is not activated. Has anyone ever used a phone to scan the cellular band? How tough would it be? I realize the guts of the phone are extremely complicated, but if you cut off the control circuitry and just run the voltage of the frequency synthyzer (spelling -5) would that work? I've tried to no avail to get schematics on my phone. It's like getting specs on the F-117. Any help would be greatly appreciated. thanks. tyler

4547. BC3000XLT

Newsgroup: rec.radio.scanner
Date: 1996-09-12 00:00:00 UTC
From: E Lynch <elynch@exis.net>
Message-ID: <323875C0.3BD8@exis.net>
Source record: 223353

I'm going to purchase another HH scanner and the one that tops the list
is the BC3000XLT. I do have a few reservations however,

1. I owned a BC2500 for a short time (returned it) and one of the
undesirable features
was a squelch tail at the end of each transmission.
Not having played around with a BC3000XLT, does this have the same
charactistic?

2. The battery. Is this improved?

3. Is there any legal difficulty buying from Javiation (UBC3000XLT)?

All of the reviews I've read indicate this is as good a scanner as the
PRO-26 and beats the socks off of the old BC2500.

Suggestions/Opinions would be appreciated.

Ed

Hello Tyler,

Some CP's have the ability to scan, others can monitor a specific channel. It's the ability to go into a test mode that you are looking for.

Once in this mode you can tell it to go to a specific channel. If I can find some old notes on which models do this I'll post it. Someone out there must be doing it, now if they'll post the info for us.

I don't know if you can use a non-activated CP for a scanner. Taking one apart and reworking it sounds like a lot of work. There are plenty of scanners that will do the job.

But the question of using a digital CP to decode someone else's digital transmission, when in the test mode, sounds inviting. Which brings us to the question of using a Astro radio with digital to decrypt another Astro radio.

Anyone willing to post info on the possibilities?

Regards,
LGS

I
>will be buying it for about $70 .. is that a good price? thanks.
>
>yin@uiuc.edu

I have one. It is a basic scanner. Not many banks. But 16 freq's
suffices for what I use it for.

I think you would be better off with the BC 100 channel model on
sale at DAMARK mail order for 99.95...has air and more...has many
features most like, like turbo scan at 100 mph....they have an
800 number....you will be able to hear more with this one and it
is more recent....the 70 is old technology. and the price is too
high seeing as what you can get for 30 bucks more....has 100
channels in 10 banks and each bank has a priority channel...10 all
too good a deal to quibble over 30 bucks....not with the
info you will read about below....

get the bc 120xlt....99.95 hand held....1800-729-9000
60 day return privileges....good cmpany to deal with....

bill conduit
bay cities video group

the batteries in the 70 don't last very long...about four
hours use...and they go out faster....scanner world sells
replacements...for 29 bucks....but the time you can listen
makes it a bad buy...you have to have a spare handy....but
isn't this the norm nowadays with batteries.....

<snip>

I've had the same thing happen with a couple of items I got at radio
shack. Looks like returns are just put back out for sale.
Fortunately that didn't happen with my scanner. They didn't have one
is stock so it was drop shipped direct to my house. I guess you just
need to check the packaging on anything you buy "new" and if it's not
new take it back.

Jeff Goldman wrote:
>
> Any opinions out there on what is the best replacement rubber ducky
> antenna. Please post.

The answer to your question is going to vary depending on the freq you want to monitor. The original PRO-43 antenna is lacking in certain bands but good in others. Finding a duck that does it all might not be possible.

I replaced my 43's duck with the duck from my 200XLT. I find it works better overall for the freq's I monitor. But before you set your sights on any new antennas, I have one suggestion.

Don't overlook the Shack's collapsible center-loaded 20-006 antenna. It is an excellent choice, I've used one since late '88 when it first came out. You can "tune" it to the band you wish to monitor and it will cost a lot less than buying a new duck. It may be the best scanner antenna readily available. I'll talk more about it later.

(Previously RS offered a 32" collapsible antenna, 20-008, but they dis-continued it. I have one and it works very well, better performance on low band)

If you really want a collection of ducks, I would recommend the Centurion line of antennas. a couple of years back they would sell direct to an individual like you and me but they've stopped the practice.

However, you can look for a distributor in your area. You can use the phone book or Alta Vista on your computer. Search under two-way radios, radios, antennas, etc... you'll narrow it down pretty easy.

You might wish to call Centurion and ask them for a catalog and the name of the distributor nearest to you. The number is 1-800-228-4563.

I'll list the Centurion antennas I use. If you have any questions, E-mail me and I can get into more detail, I have their latest catalog.

The best low band antenna is their EXL model. It covers 30-50MHz and is available in bands of 30-36, 36-42, 42-50MHz. It is a bit long at 11".

The best dual band they offer for VHF/UHF is the EXY model. It covers the 140-174 and 400-512 bands. It's about 6" length but can be reduced to 5 1/4" by trimming the PVC jacket. I find it better than the RS 43 antenna but still find my 200XLT antenna more useful for the bands I monitor.

They offer numerous VHF style antennas. I've had a couple "cut" to specific freq's and they seem to perform well. I believe it's the EXS line that you'd want, about 3 1/2" long and they offer a fully jacketed

antenna, i.e., the metal BNC connector is also covered by the rubber jacket. It looks neater and fits snugly on your scanner.

A UHF model I like is the Style G model. It's a 1/2 wave and offers 2.5db gain over a standard 1/4 wave antenna. It's base loaded and is about 13" long. If that's too long they also offer a 1/4 wave model called the EXC. I have one cut to a local user, very low power, simplex and it really pulls in the signal better than any of my other antennas. About 6" long.

The best antenna overall for my PRO-43 is the EXG which covers the 806-960MHz band. It offers 3.0db gain in a 5/8 wave design, base loaded. Anyone who owns a 200XLT knows that it's a brick when it comes to monitoring the 800 trunk band or anything in the 806-960 band. This antenna really helps the 200XLT hear, that's pretty good. It measures 8", it's a very good antenna.

One advantage to the EXG is that it attenuate's the VHF band somewhat. But I find that that's perfect on my PRO-43 which is intermod prone in the VHF band where it's much more sensitive than the 200XLT. This allows me to use it when I'm in a high RF area, especially near pager sites, which are everywhere. I tend to use this on my PR0-43 most of the time.

If you want a duck and want only one, the EXG is it. If you want several I'd order a Centurion. They cost $18-24 each. You can also find ducks at flea markets. But you'll have better success in ordering a duck cut to the particular freq or band you want to monitor.

BTW, an antenna cut to a particular band works very well on a frequency counter by helping it become more sensitive to the band you want to capture a signal from. You can use an antenna this way to attenuate unwanted signals to a degree.

My Interceptor also likes tuned antennas which help make it less sensitive to TV and radio station RF. Both tuned antennas and a Jim-75 or Jim-51 pre amp can do wonders to improve signal capture.

Perhaps the best replacement duck is the GRE All-Band antenna, I believe this is the one that came with the PRO-34. A knowledgeable friend states that it is the best of the OEM antennas. He's tested numerous antennas on lab equipment and likes this one. Order from GRE.

Larsen also has antennas available but I've never used any of them. Maybe someone will post info on their line.

Another popular antenna is the Austin Condor. It's been around for a while and some people feel it makes for a good low band antenna. It's 12" tall and costs about $29.95 in most catalogs. Grove (MT publisher) carries this antenna, 1-800-438-8155 for orders only.

I just heard about a new Austin antenna called the Seeker. It's suppose to cover the 850-900MHz band. Hopefully someone will post info on the Austin line for us.

20-006 tuning:

Tuning the 20-006 is simply a matter of experimenting with the antenna by collapsing various sections. Here's one way I found to make it work better on low band and VHF high.

The antenna consists of 5 sections on top of a center loading coil and then 4 more sections under the coil. Section 1 is the top element and #9 is the bottom one for this discourse.

Try to find a low band signal like the local fire channel or your own cordless phone. Extend the antenna and then collapse only the top 2 sections. You'll have to experiment a bit to see where you find your best gains.

Perhaps you'll need to push in the 3rd section half way, it'll depend on the freq involved. I could hear more cordless activity when I used the antenna this way, at least when it was legal to monitor cordless.

The VHF can be helped the same way. But this time you need to collapse elements 4 and 5 down to the coil's top. I find it helps get the best VHF signal in the federal band. Experiment on your own to see where you get best results. The 20-006 only costs $9.95.

I have also added winding to the coil hoping for better low band recep-
tion. I can't explain why the antenna works like it does, we'll leave that for the more technical people in this newsgroup. I did however write to Radio Shack about it and one of the engineers responded. But he only offered the info that it was designed using usual antenna theory and spectrum analyzer procedures.

It's a favorite when I have the room for it in my gear bag. At the price RS sells it for, it's a steal. I hope some of the above info helps you choose a replacement antenna.

Regards,
Lou Shirley

I have a US version of the BC-3000 and love it. I do notice that the battery doesn't last too long. It seems I get about 3 times as much use out of my BC-60 with regular AA Ni-cads.

I have friends who have bought from Javiation and have been very happy, however you will have to pay the Duty tax when they deliver it wich could be from $20-60.

4561. Re: WS-1000 Worlds Smallest & Best Scanner FOR SALE!

US blood lust for war? The United States joined World War II on
December
8, 1941. Canada joined WWII in 1939. The US known for violence? I
hope
you are never in the middle of an European soccer riot. Terrorists?
Don't
visit Northern Ireland soon. GST and provincial tax a small price to
pay?
Sorry, but I don't want to pay 10 to 13 percent extra for everything I
buy.
One last point, what country supplies 95% of your prime time
entertainment
on your television?

Try any Amateur Radio Outlet, AEA, HRO, ect... and the OPC-581 is listed
for $48 retail. Are you asking $49 or is that what you paid?

> dispatch office! Are they operating simplex? Are the mobiles offset a few Khz or Mhz?

The mobile units are total seperate channels, base is on one channel the cars on another. There is no set spacing, it depends on which "color" channel your local CHP station is on. For instance here in Ventura CA, they use Purple, which is 42.400 base and 42.160 mobile

I have a statewide list of CHP channels and for the life of me can't find it. I just had it last night too. If you can find out what color the channel is for each station, I have the list of all the colors, just not which station uses which.

Also, the mobile radios are low power, you're not going to hear them unless you're right on top of them most of the time anyways. Dial in 154.905 which is the hand-held mobile repeater, you'll hear the portables on that for miles.

Try listening in on the extender frequency of 154.905MHz. This is a hand-held frequency that is repeated by the mobile repeater in the trunk of the mobile unit onto the low-band frequency, or used directly to contact the station and other units. This will probably solve your problem. Down here in So.Cal., different PLs are used for simplex, emergency, and calling the station.

Ok, I have an operational cell phone that is not activated. Has anyone ever used a phone to scan the cellular band? How tough would it be? I realize the guts of the phone are extremely complicated, but if you cut off the control circuitry and just run the voltage of the frequency synthyzer (spelling -5) would that work? I've tried to no avail to get schematics on my phone. It's like getting specs on the F-117. Any help would be greatly appreciated. thanks. tyler

4573. PLEASE Info on the best VHF/UHF scanner

Newsgroup: rec.radio.scanner
Date: 1996-09-12 00:00:00 UTC
From: Miro.Ivankovic@guest.arnes.si
Message-ID: <648_9609140804@courex.com>
Source record: 223379

Hello,

I am looking for the 'best choice' of the VHF/UHF (incl. Air)
handheld scanners. Could someone give me any advice on this.

However, I don't care about HF (SSB...) but I want a good perfor-
mance nearby 100-500 MHz (AM/NFM) and above.

Generally, all requirements are: good VHF/UHF and AirBand, high
level audio output and maybe standard batt. size - 'AA'

Thanks, in advance, for the help and any information.

Miro Ivankovic

It would not be easy to pick your signal off a satellite up/downlink
or off a microwave beam, especially if the signals are multiplexed by
any of the common or uncommon means. For the hobbyist, it would be
almost impossible. Almost....

For the government operative or dedicated pro.....it could be a piece
of cake. But they'd almost have to be looking for you or your signal.

In a word, no your data would not be "private" in the strictest sense,
but it would be fairly secure, depending on your trust levels.

It doesn't matter if the receiver is right on....or 5 k Hz off. The
receiver has no control over the accuracy of the cesium beam standard
at WWV. The freq coming in is 10.000000 MHz. You can bank on it.

>If your not willing to be responsible for people further mis-tuning
>their receivers why the hell do you suggest such a thing!

Same reason anyone suggests a better or more effective or easier way
of doing something.

In this case, that will NOT happen. But even if it did, the user
would instantly know by sensory feedback, and be able to correct for
it. However, the part of the trimmer capacitor that is contacted by
the screwdriver is at ground potential, so there is no detuning.

> What school did you go to?

Several, but that is not germane to this issue.

>Your not tuning up your wheelchair Billy. If you don't have the

You're a jerk. Whether you consider other people to be a jerk or not
is beside the point: You're a total jerk. I have a problem with my
scanner, which I posted here. I had the help of some good people, who
helped me diagnose the problem and even suggested some places to get
it fixed. I contacted them, and it looked like it was going to cost
about $125. Cheek saw the problem and posted a potential fix, wit
appropriate warnings, for which I am very grateful. If there are some
improvements or corrections to the procedure you want to make, the
professional or reasonable way to do it is to make the comments, along
the line of "be aware that this depends upon your SW's freqency
accuracy" and "you really should use a non-metallic screwdriver for
the following reason". Instead, you throw insults.

I don't recall you posting any type of procedure to help solve the
problem. But you're damn quick to insult someone who did.

And as regards your comments re: the wheelchair - you've really
displayed your intelligence there.

>154.845 (F2)

140.430 is a paging channel (may be hydro).
413.6875 is used by MOH air ambulances.
153.710 and 154.845 are no longer used by Toronto Hydro since they
moved to 900 MHz (see my earlier message).

>Not to mention having the "privilege" of paying $6 for a pack of smokes
>and $40 for a case of beer. Where do I sign up?

$6 for cigarettes and $40 for beer? What fiction have you been
reading? Prices may not be as *cheap* as the US, but you have to pay
for quality...

This file is shareware, by reading this u agree to send me $700.23.
it's about 30 pages when printed. Have fun. Welcome any corrections but
pls don't send me the whole list back. Mostly CA, AZ, NV stations.

Ahhhh, No. That's just for clueless tourists. The rest of us pay only
about $3 for a pack of cigarettes (REAL Cigarettes), and about $28 for a
case of beer (That's REAL beer folks, 6.5 percent alcohol. Not that light
beer you folks love so much) :->

MAKE YOUR OWN CABLE DESCRAMBLER - CHEAP!

Making your own Cable Test Box is simple!
Convert any cable box to a Cable Test Box, in no time!

If you've seen ads for converters that sell for up to
four hundred dollars, you know that this is a great deal.
(It does the same thing.) All modules are priced from
about ten to forty dollars!

Once you know how to get the the correct module, it's
simple to install, and they descramble all channels
on all systems. Don't be ripped off any more!

For more information, and a complete list of companies
that sell Test Modules, send Cash or Money order for
$5.00 to:

Ward Cable Enterprises
1606 Soquel Avenue Ste#A
Santa Cruz, CA 95062

You haven't said what kind of antenna you have!

That is probably the problem.

The standard rubber ducky just won't get it.
A center loaded expanding ant., like RS has, will work pretty good on a
handheld radio.
My RS discone (w/ added top element) works just fine for my 2004 and 2035.

cheers

4590. Re: MilSatCom Iraq...any action??

Newsgroup: rec.radio.scanner

George F. wrote:
>
> Are MilSatCom communications in WFM, NFM, or AM?

Mostly WFM (DAMA) & NFM. Occasionally you'll catch some AM aircraft traffic coming thru the satellite by accident, due to poor freq. coordination.

Because of JCS mandates on spectrum & transponder resource efficiency, much traffic these days use Demand Assigned Multiple Access waveforms.

ronkatz@interlog.com (Ron Katz) wrote:

>Hay Rocket Scientist, do you really think that anyone has a rock solid
>shortwave receiver that's bang on frequency or what? dahhh
>
Hey! Shit for brains! It doesn't matter diddly squat how `solid' the shortwave receiver is just as long as you can tune WWV and `hold' it for 60 seconds to beat the other oscillator against it. It's the *accuracy* of WWV that counts!
>
>If your not willing to be responsible for people further mis-tuning
>their receivers why the hell do you suggest such a thing!
>
Hmmmmmm... Why do I get this feeling that you cannot read? Bill was pretty good about mentioning that this may not work for *everyone* just because it might not be what is needed or is within the realm of a *very few* individuals. Now... I *would* expect that a `complete klutz' like you appear to be could even following directions screw up a wet dream and *shouldn't* be trusted with even a dull plastic `spork'.
>
>BTW Engineer, any metallic object such as the jewelers screwdriver you
>suggested will cause the inductance if a coil to change when it is
>inserted. If in this case its a trim cap then you are also effecting
>the capacitance while the tool is near. While adjustments are made
>after removing the tool it will change and drift again as the trim cap
>sets into its new position... What school did you go to?
>
As *both* an EE *and* as someone who has successfully run a consumer electronics repair service I have much more faith in what Bill has put forth in his missive than I would *ever* have in *anything* you would or ever will say. If Bill doesn't mention that there may be any detuning by the use of a metallic `adjustment tool' to do the job then there probably *isn't*. (Or at least not enough to make diddly squat compared to the benefits. {CHORTLE!}) *Now* there are of course possible `problems' when you are dealing with *inductors* (If you want the least effect by your adjustment tool then a *totally* non-inductive tool is the way to go. But! Even if you *do* use a ferrous or non-ferrous adjustment tool you can do the job! [Hmmmmm... I wonder... Do *you* know how to take advantage of ferrous and non-ferrous adjustment tools? HINT... You can get an idea of which way or if is necessary for you have to adjust a circuit. {BSE GRIN!}]) BTW, I *have* done exactly what Bill has suggested to both of my 2004s and my 4 2006s without any problems and with dramatic improvement to all of them. Now... I *will* admit that since I have `service' type adjustment tools and instruments I used them. But! I also did check to see if it would make any difference if I used a `run of the mill' jeweler's screwdriver (Rat

Shaft set) and a `cheap' SW receiver (An `antique?' AIWIA boombox with SW.)
since not everyone has the same tools a repair shop should have. NO PROBLEM!!
As for `physical?' drift? Unless GRE used a *horrendous* amount of `wax?' to
secure the adjustment at the factory... I don't see *that* as a problem.
>
>Your not tuning up your wheelchair Billy. If you don't have the
>correct tools to do the job..DON'T DO IT
>
Ah... Up to your usual *low* standards, eh? Not satisfied with being a
`general asshole' you have to be a *flaming asshole*. Since Bill *has* done it
with the tools mentioned, and it is definitely apparent that *you* haven't, I'm
not surprised that *you* would be the one to open your fat yap and try and put
forth as an `expert' about the tools needed.

Why don't you crawl back into the slime pond you came from? (Hmmmmm... The
more I think about it... Maybe you *didn't* `crawl out'... Maybe the slime
threw you out!?)

It will pick up cellular, but not in 30 Mhz steps (you have to use 5 Mhz
steps with the scanner in "Turbo," search mode).

Hmmm, suspect this one was written by a tyro who just got his Internet
license. Notice the ALL CAPS, a sure sign of a rank amateur. Then there is
the obvious misuse of the term "spam," which certainly does not apply in
this case since this post was was only posted posted here. Last, there is
the admonishment to take this to e-mail, which is certainly inappropriate
since the discussion about moderating a scanner forum in certainly on
topic.

The only observation that Bobmac has made that is worth a shit is that most
people do want to see articles "bout" scanning. So, I'll tell you what
Bobmac, why don't you post something worthwhile or shut the hell up?

Two suggestions. Since the service manual has a conflict for the MA862 between the diode lead identification page and PCB layout illustration regarding the diode polarities, could you have reversed 1 diode in each pair? This would explain the loss of 800 MHz (half of D101) and 50 MHz (half of D110). Secondly, replacing RF diodes with switchers is a bad idea. At 800 MHz, even the leads represent tuned circuits, and the capacitance is bound to be wrong. This could easily account for the poor performance on VHF.

GROUP! A NEW WINNER EMERGES. NOTED THAT THE "CHEEKS GUY" HAS
BEEN REMISS FOR A FEW DAYS...NOW IT SEEMS THAT WE HAVE A NEW EMPEROR
OF THE DEARTH IN THIS POSTER NAMED ALEXANDER.....Notice how he is
very careful not to use the POOP word....he calls it by "shit" ...
I guess this qualifies for scanner-talk according to the new order
of things....

OK...Alexander, Michael....how are you going to keep interest
in this group as did the Cheeks Guy? Do you continually tell people
to SHUT THE HELL UP? Something the "cheeks guy" did not do...he
welcomed all and no one to engage with....

Or is there going to be more voices heard to try to fill in the
silence left by the Cheeks Guy who evidently is still asleep and
has not awoke to this new challenge to "take over".....

OOOPS!

At least with "the cheeks guy" you had a choice....either rebut
him or put him in a kill file. Nasty business telling people to
obey somone who assumes that all will now have to listen because
"you say so"....

I too proposed that anyone with a gripe against the Cheeks Guy
take it to e-mail....personal bantering on personal time. The
response was: well, you have been reading it for some time now.
Everyone wants to be seen as attacking "the Cheeks Guy" for all
to know and then forget....

Now ... have you anything to say about scanning which is of a
Priority One Need To Know? More than "...just shut up".....

Source record: 223433

r> Most radio and TV stations utilize frequencies in the 161.xx, 450.xx or
r> 455.xx Mhz range for what is termed "remote broadcast pickup" use. This
r> allows the reporter or DJ to transmit audio back to the studio for
r> broadcast over-the-air.

Around Californmia, few stations use those freqs for over-the-air stuff.
They're most often used on repeaters to direct the crews to incidents and get
info back and forth. Live TV broadcasts, video AND audio, is done via
microwave setups (the big 'towers' on top of the TV remote trucks).

Radio stations can feed audio via their 'remote broadcast' freqs, but more
often they use cellphones, since they're more 'secure'.

r> During the time the cell phone is in use,
r> they are paying the same per minute charges as anyone else.

Not necessarily. Here, 2 of the 4 stations doing news have 'tradeous' with
cell providers, resulting in special 'no charge' cellphone access (supposedly
for the public to call in news tips). They quickly realized that station
personel could ALSO make free calls to the station that way.

... Don't worry. Be happy.

4612. Re: PRO-2004/5/6 Precision Adjustment

Newsgroup: rec.radio.scanner
Date: 1996-09-12 00:00:00 UTC
From: bcheek@cts.com
Message-ID: <3238220c.47115879@192.188.72.23>
Source record: 223434
Cross-posted to: rec.radio.scanner,alt.radio.scanner

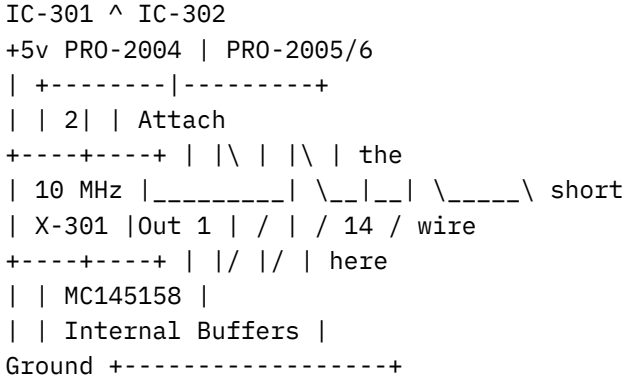
To All Owners of the PRO-2004/5/6 scanners:

Apparently there is a little consternation and confusion in certain uninformed quarters with respect to calibration of the Master Reference Oscillator in the PRO-2004, PRO-2005, and PRO-2006 scanners.

Indeed, X-301 oscillates at 10 MHz and has a very critical adjustment. The scanner cannot perform properly unless X-301 is within a very tight "window" or margin of error. The specs call for +/- 5 Hz. That means the low limit is 9.999995 MHz; the high limit is 10.000005 MHz. What's more, it is not possible to achieve this accuracy with a hobby grade frequency counter, and it is risky to rely on a lab-grade frequency counter, unless its calibration history is known.

And yet there is a simple way that even the least informed hobbyist can make the adjustment of X-301 with a precision to beat that of most any "pro-shop's" frequency counter. My original article on this thread defined that method. All you need is a shortwave receiver, a Radio Shack #3 flat-blade jewelers screwdriver; a short piece of insulated wire, AND a fairly clear signal from WWV or WWVH on 10 MHz from the shortwave receiver.

X-301 is a sealed, shielded "cannister" that contains a quartz crystal oscillator; an amplifier/buffer transistor; some components to make the oscillator relatively insensitive to temperature fluctuations; and a trimmer capacitor for precision adjustment of the oscillator frequency. There is a hole in the top of the unit to access the trimmer capacitor, the adjustment side of which is grounded. X-301 is properly called a TCXO (temperature compensated crystal oscillator).



Above is an ASCII schematic diagram of what we're dealing with. The above ASCII box signifying X-301 is about the same size as the real X-301. You won't see X-301's three leads, but there are ground, DC

power, and Output. It is possible you could "draw" the oscillator off frequency by tampering with its output, but I solved that problem after a study of the IC chip, MC145158.

The Output from X-301 goes into Pin 1 of the chip. Pin 2 is an buffered output that drives the scanner. Don't mess with Pins 1 or 2.

But I noticed that the signal goes through *another* buffer that outputs at Pin 14 which is dead-ended - it's not used! This is where we attach the short "antenna" wire to radiate some of X-301's 10 MHz signal to the antenna of the the shortwave receiver where it mixes with the WWV signal.

You do not want to unnecessarily adjust X-301, but you can test it all you want. Just tune in WWV 10 MHz on your shortwave receiver, and touch a wire to Pin-14 of the MC145158 chip. If the wire is too long, it will radiate too much signal and "swamp" the WWV sigal, so shorten it, if need be. If not enough signal is radiated, then WWV will swamp the X-301 signal, so lengthen the wire. Nothing hard about that.

Once the two 10 MHz signals into the shortwave receiver are about right, your ears will be able to tell everything else you need to know. If the shortwave receiver has an S-Meter, so much the better because then you will also have visible feedback. Between your eyes and ears, the effects of the two 10 MHz signals will clue you if there is an error between the two. The S-Meter will "jiggle" at the error difference. If there is a 5 Hz error, the meter will jiggle at five beats a second. A 1 Hz error will make the meter sweep once per sec.

The audible "whoosh-whoosh" sound of the two 10 MHz signals is unique and distinctive. It is much the same as when two people stand close and each whistles a continuous tone, and one tries to match the other. As the one gets close, they will HEAR a "warble" or vibratto that decreases until the two tones match. You will hear much this same effect in the shortwave receiver, if X-301 does not match WWV's freq.

If there is an error, then it will be X-301 that's off. WWV is never off. Its 10 MHz signal is derived from a cesium beam atomic clock, the accuracy of which is incontestable. Adjustment of X-301 in accordance with my first article on this thread will "match" the two signals, and you will be able to tell when it's right. This process of "zero beating" X-301 to match WWV is an ancient and time-honored technique that will be fondly recalled by anyone who knows anything at all about radio.

Message-ID: <32383D7C.7A9@worldnet.att.net>
Source record: 223436

I was wondering what area of NJ you live in? If you're close to them, you'll hear ch10 without any problem, it's simplex.

BTW, the DEA had exchanged radios w/Essex Cnty last night while working on a bust. The Cnty is taking down a druggie at 1PM today, haven't heard the DEA yet, in case you're interested.

Write me before posting anything on the DEA should you find some new freq's. All of Nwk's channels are different from the National lists

I want to sell these two TOGETHER:

BC8500XLT Scanner (500 memories, tunable VFO, 100 ch/sec speed)
GRE Super Converter 9001 (base model, intercepts cellular band)

Firm price: $300 for combo. Both units are in GREAT shape. I also have
the boxes and the manuals for them. Contact only if interested, please.

I will post to rec.radio.swap/scanner newsgroups when they get sold.

Email me first and give me your phone number. I will call you back ASAP.

I guess many of us should thank a certain moron that jumped you for your
original post on this subject. If he hadn't been such a dipstick we would
have
missed this explanation of the process. Thanks to you and the moron.

Question, what are the chances that doing said procedure would improve
the performance of my 2004? The radio 'seems' to be fine but I am curious
as to you opinion if it is worth the effort to open up the radio and check
it.

You might take a look at:
http://www.ericsson.com/EPI/BR/index.html

technically all I know is that the data channel is at 9600 baud.

>Tom KJ5IE
If one is going to use just one speaker it doesn't hurt to have
something with a nice sound available when you can use it. I like to
listen to utes a lot in the evening (ssb 2.3 kHz) but in the morning I
wake to the BBC on 9740 in the hifi synchronous mode (dsb 7 kHz).
Speakers and their relation to the listener via the room are the most
complicated part of this whole radio biz. For AM radio listening I
prefer a widerange single transducer with a stiff cone and high
efficiency, mounted in a simple box (e.g. Auratone) that will sound
very pleasant on 1 Watt or less in an otherwise quiet room. For
strictly utility type listening a Motorola Mocom type 4" transmission
hump speaker is pretty cool. Contrary to L. Magne I do not think that
low efficiency minature bookshelf (Minimus) speakers are particularly
suited for these purposes.
dr
Dave Rickmers I'd wake up and
rickets@earthlink.com there'd be nothing...

>beer you folks love so much) :->

Cigarettes here go for $1.60-$1.70/pack, or $15-16 per carton. This includes Pall Malls, Camel "straights", etc. "Real" cigarettes, I guess you'd call them.

"REAL beer" (Icehouse, or equivalent "ice" beers...7-8 percent alcohol) can be had for $6.99 per 12-pack. Plus of course, the sales tax rate is 6% total. Not 7,8, 9% provincial PLUS 7% Canadian GST for a total of 14-16%!!

Sounds like we've got the better deal down here in the States.

Message-ID: <517nnf$skd@mtinsc01-mgt.ops.worldnet.att.net>
Source record: 223497

Hi Andrew,

If you want to decode "all" the data sent to pagers in your area, you're going to be very busy for a long, long time.

The data sent out by pagers can be on numerous freq's and different bands, low band, VHF, UHF, 900 megs. You can change freq's on your scanner, one at a time but you can't monitor them all at once.

You would need to know which freq you wanted to capture data from and yes each page to an individual is unique to his pager, this can be searched out so as to follow any given pager msg. This is how law enforcement can keep tabs on the pages a drug dealer gets. They simply have the dealer's pager cloned to get the same msg he gets.

W/o getting into any more detail, the best equipment I've seen readily available to the public is from K & L Technology in Garland, Texas. It will work w/a variety of scanners and requires you to make a connection to the scanner via its earphone jack.

Software and hardware are provided and if memory serves me correctly, at least a 386 chip computer is needed. Somewhere around $139.95 plus S&H. K&L Technology, P.O. Box 460838, Garland, TX 75046-0838. They have a phone/Fax of 1-214-414-7198.

You can also E-mail them at KLTsupport@aol.com (there is an ad for them in the Aug '96 Monitoring Times issue, pg 103)

You'll be able to track a variety of pagers, probably more than you want since so many people have pagers. It's the cap code that ID's the individual pager and would allow you to track any particular person, if that's what you really want to do.

Regards,
LGS

Correct. Programming the radios is "relatively" easy (if you can
understand motorolas software!), if you have the right equipment &
software. You can't add talkgroups to a radio without the system key
for that talkgroup (usually conventional and trunked channels and
talkgroups can be programmed in to the same radio).

System Administrators and Motorola Shops are pretyy ruthless about
keeping their system keys locked away. As an educational excercise
(challenge) I would like to find a way to 'build' system keys. The keys
are a file only about 30-40 characters of encrypted data.

Does anybody know the format these keys follow so I can start pulling
the keys I have apart, in order to learn how to build other ones.
